

USER GUIDE

# Essential Studio

## for EJ2 Vue

---

Version - v24.1.41 | Release Date - December 18, 2023

Syncfusion Vue UI Components (Essential JS 2) .....	99
Components list .....	99
table .....	99
How to best read this user guide .....	101
Getting help .....	101
See also .....	101
System Requirements for Vue UI Components .....	101
Browser support .....	102
Vue supported versions .....	102
Browser Support .....	102
Required polyfills .....	102
Using CDN .....	102
Node.js .....	103
Getting started .....	103
Vue 3 .....	103
Getting Started with Vue UI Components with JavaScript and Composition API .....	103
Getting Started with Vue UI Components with TypeScript and Composition API .....	108
Getting Started with Vue UI Components with JavaScript and Options API .....	114
Getting Started with Vue UI Components with TypeScript and Options API .....	119
Getting Started with Syncfusion Vue UI Components in Vue 3 .....	126
Vue 2 .....	133
Getting Started with Syncfusion Vue UI Components and Vue CLI .....	133
Getting Started with Syncfusion Vue UI Components and Vue CLI .....	137
Getting Started with Vue UI Components with the Nuxt Framework .....	141
Prerequisites .....	142
Set up the Nuxt project .....	142
Add Syncfusion Vue packages .....	142
Import Syncfusion CSS styles .....	142
Add the Syncfusion Vue component .....	143
Run the project .....	144
Getting Started with Vue UI Components with Vite and PNPM .....	145
Prerequisites .....	145
Set up the Vite project using PNPM .....	145
Add Syncfusion Vue packages .....	146
Import Syncfusion CSS styles .....	146

Add Syncfusion Vue component .....	147
Run the project .....	149
See also .....	149
Getting started with testing Vue UI components in the Vitest project .....	149
Prerequisites .....	149
Set up the Vitest project .....	149
Add the Syncfusion packages.....	150
Add the Syncfusion Vue component.....	151
Run the project .....	152
Getting Started with Syncfusion Vue UI Components using direct scripts in a quickstart application	153
Prerequisites .....	153
Set up the Vue project .....	153
Import Syncfusion CSS styles .....	154
Import Syncfusion Vue scripts .....	154
Add Syncfusion Vue component.....	154
Run the project .....	157
Installation and Upgrade.....	157
Installation .....	157
Install by using npm CLI.....	157
Install by using package.json.....	158
Download JavaScript – EJ2 Installer .....	158
Download the trial version.....	158
Installation using Web Installer .....	161
Overview .....	161
Installation .....	161
Uninstallation.....	168
Installation using Offline Installer .....	174
Installing with UI .....	175
Installing in silent mode .....	182
Installing Syncfusion JavaScript – EJ2 Mac Installer.....	183
Steps to resolve the warning message in Catalina OS or later .....	183
Step-by-Step Installation.....	184
License key registration in samples .....	189
Linux Installer .....	189
Download Syncfusion JavaScript Linux Installer .....	189

Installing Syncfusion JavaScript Linux installer .....	193
Common Installation Errors .....	194
Unlocking the license installer using the trial key.....	194
License has expired .....	194
Unable to find a valid license or trial .....	195
Unable to install because of another installation.....	196
Unable to install due to controlled folder access .....	197
Upgrade.....	199
Syncfusion Vue supported versions .....	199
Vue version compatibility .....	199
Syncfusion version information .....	199
See also .....	199
Upgrading Syncfusion JavaScript (Essential JS2).....	199
Upgrading to the latest version .....	199
Upgrade from trial version to license version.....	200
Licensing.....	200
Syncfusion Licensing Overview .....	200
Difference between unlock key and license key.....	200
Registering Syncfusion license keys in Build server .....	201
See also .....	201
Generate Syncfusion Vue License key .....	201
Claim license key.....	201
See also .....	203
Register Syncfusion License key in Vue application.....	203
Register Syncfusion license key in the project.....	204
Register Syncfusion license key in the Nuxt project .....	204
Register Syncfusion license key using the npx command.....	204
Activate the license.....	208
See also .....	209
Syncfusion Licensing Errors.....	209
Licensing errors.....	209
Licensing errors from version 16.2.0* to 20.3.0* .....	212
Licensing FAQ.....	216
Is an internet connection required for license validation.....	216
Upgrade from the trial version after purchasing a license .....	216

Where can I get a license key.....	216
Will the registered license key expire .....	217
When to generate new license key while upgrading.....	217
License registration for multiple developers on your project .....	217
Can I use the same key for all the web apps under the project .....	217
Does the license registration access any resources or data .....	217
License & Downloads shows the "Essential Studio Enterprise Edition Binary with Test Studio" and the "Project License". Which license to use.....	218
If I registered the license key in both the application and the license text file .....	218
Potential causes of licensing errors in applications. ....	218
Appearance .....	219
Theme in Vue Appearance component .....	219
Referring individual control theme .....	220
Common variables .....	221
Size modes in Vue Appearance component .....	233
Size mode for application .....	233
Size mode for a component .....	234
Change size mode for application at runtime.....	234
Change size mode for a component at runtime .....	235
See also .....	236
Icons in Vue Appearance component.....	236
Referring icons in the Vue application.....	236
Steps to use icons library .....	237
Available icons .....	241
Theme studio in Vue Appearance component .....	242
Customizing theme color from theme studio.....	242
Import previously changed settings into the theme studio .....	250
Material 3 Theme.....	253
Syncfusion Material 3 Theme .....	253
What are CSS Variables? .....	254
Dark mode support .....	255
ThemeStudio application .....	257
Common.....	258
Accessibility in Syncfusion Vue Components.....	258
Accessibility overview .....	258

Accessibility standards .....	258
Accessibility compliance .....	258
Ensuring accessibility .....	259
Accessibility support for specific components.....	259
table .....	260
Right-To-Left support in Syncfusion Vue Components.....	261
Enable RTL for all components .....	261
Enable RTL for an individual component .....	263
State Persistence in Syncfusion Vue components .....	264
State Persistence supported components and properties .....	265
Event Binding .....	267
Custom events .....	267
calendar { .....	268
Native events .....	268
Model Binding.....	269
Integrating Vue model binding in Syncfusion Vue UI components .....	269
Templates in Syncfusion Vue Components.....	270
Types of templates.....	270
Slot template.....	270
Inline template.....	273
External template.....	274
External modules in templates .....	276
Provide/Inject in templates .....	278
Animation in Vue .....	279
Animation effects.....	280
Animation duration.....	280
Animation delay .....	281
Enable or disable animation globally .....	282
Getting started with Localization.....	282
Loading translations.....	283
Changing current locale .....	284
Internationalization.....	284
Loading culture data .....	284
Changing Global Culture and Currency Code.....	285

Manipulating DateTime .....	289
Drag and Drop in Vue.....	294
Draggable .....	294
Droppable .....	297
See also .....	298
Deployment .....	298
CDN .....	298
Packages.....	299
How To .....	300
Updating Syncfusion npm packages .....	300
How to resolve Content Security Policy (CSP) errors.....	300
Troubleshoot.....	301
Content Security Policy .....	301
Visual studio code integration .....	302
Visual Studio Code Integration .....	302
Overview .....	302
Visual Studio Code Extensions .....	302
Download and Installation .....	302
Visual Studio Code Extensions .....	304
Intellisense of Syncfusion Vue Components.....	308
Accordion .....	309
Getting Started with the Vue Accordion Component in Vue 2.....	309
Prerequisites .....	309
Dependencies.....	309
Setting up the Vue 2 project .....	310
Adding syncfusion packages .....	310
Add Syncfusion Vue component.....	311
Running the Application.....	312
Initialize the Accordion using HTML elements.....	313
Getting Started with Vue Accordion Component in Vue 3 .....	316
Prerequisites .....	316
Setup the Vite project .....	316
Adding Syncfusion Vue packages.....	317
Import Syncfusion CSS styles .....	318
Adding Syncfusion Vue component .....	318

Run the project .....	321
See also .....	321
Expand mode in Vue Accordion component .....	321
Single .....	321
Multiple .....	322
See Also .....	323
Accessibility in Vue Accordion component .....	323
ARIA attributes .....	324
Keyboard interaction .....	325
Ensuring accessibility .....	325
See also .....	325
Style in Vue Accordion component .....	325
Customizing Accordion .....	325
Customizing the list items .....	326
Customizing Accordion's header .....	326
Customizing Accordion's expand and collapse icons .....	326
Customizing the hover state of Accordion control .....	326
Customizing selected item of Accordion control .....	326
How To .....	327
Set the nested accordion in Vue Accordion component .....	327
Load content through post in Vue Accordion component .....	329
Set custom animation in Vue Accordion component .....	330
To keep single pane open always in Vue Accordion component .....	332
Create wizard using accordion in Vue Accordion component .....	333
Load accordion with data source in Vue Accordion component .....	339
Customize expand collapse actions in Vue Accordion component .....	340
Render other components in accordion using template in Vue Accordion component .....	342
Accumulation Chart .....	343
Getting Started with the Vue Accumulation chart Component in Vue 2 .....	343
Prerequisites .....	343
Dependencies .....	344
Setting up the Vue 2 project .....	344
Add Syncfusion Vue packages .....	345
Add Syncfusion Vue component .....	345
Adding Chart Component .....	346

Run the project .....	347
Getting Started with the Vue Accumulation Chart Component in Vue 3 .....	347
Prerequisites .....	347
Set up the Vite project .....	348
Add Syncfusion Vue packages.....	349
Add Syncfusion Vue component.....	349
Run the project .....	352
See also .....	353
Pie dough nut in Vue Accumulation chart component.....	353
Pie Chart.....	353
Radius Customization.....	354
Pie Center.....	355
Various Radius Pie Chart .....	356
Doughnut Chart.....	357
Start and End angles .....	358
Color and Text Mapping.....	359
Multi-level pie chart.....	360
Pyramid in Vue Accumulation chart component.....	363
Mode.....	364
Size .....	365
Gap Between the Segments.....	366
Explode.....	367
Customization .....	367
Funnel in Vue Accumulation chart component .....	368
Size .....	369
Neck Size .....	370
Gap between the segments .....	371
Explode.....	372
Smart Data Label.....	373
Customization .....	374
See Also .....	375
Data label in Vue Accumulation chart component.....	375
Positioning.....	376
DataLabel rotation .....	377
Smart labels.....	378

Datalabel template .....	379
Connector Line .....	380
Text Mapping .....	382
Format.....	382
Customization .....	384
Text wrap .....	385
Show percentages in data labels of pie chart .....	386
Grouping in Vue Accumulation chart component .....	388
Broken slice .....	389
GroupMode.....	390
Customization .....	391
Empty points in Vue Accumulation chart component.....	392
Customization .....	393
Annotation in Vue Accumulation chart component.....	394
Region .....	395
Co-ordinate Units.....	396
Alignment.....	397
Tooltip in Vue Accumulation chart component.....	398
Header.....	399
Format.....	400
Tooltip template .....	400
Fixed tooltip .....	401
Customization .....	402
To customize individual tooltip.....	403
Tooltip mapping name.....	404
Legend in Vue Accumulation chart component .....	405
Position and Alignment.....	406
Legend Reverse .....	407
Legend Shape .....	409
Legend Size.....	409
Legend Item Size .....	410
Paging for Legend.....	411
Legend Text Wrap .....	412
Enable Animation.....	413
Legend Title .....	414

Arrow Page Navigation .....	415
Legend Item Padding .....	416
Center Label in Vue Accumulation chart component.....	417
Center label.....	417
Hover text .....	418
Customization .....	418
Title and sub title in Vue Accumulation chart component .....	420
Title .....	420
Title customization.....	421
SubTitle .....	422
SubTitle Customization .....	423
Chart print in Vue Accumulation chart component.....	424
Print.....	424
Export.....	425
Appearance in Vue Accumulation chart component.....	426
Custom Color Palette .....	426
Animation.....	427
Accessibility in Vue Accumulation chart component .....	429
WAI-ARIA attributes.....	430
Keyboard interaction .....	430
Ensuring accessibility .....	431

Custom search in Vue Auto complete component.....	513
Avatar .....	514
Getting Started with the Vue Avatar Component in Vue 2 .....	514
Prerequisites .....	514
Setting up the Vue 2 project .....	514
Add Syncfusion Vue packages.....	515
Import Syncfusion CSS styles .....	515
Using Avatar in Vue Application.....	516
Run the project .....	516
See Also .....	517

Getting Started with the Vue Avatar Component in Vue 3 .....	517
Prerequisites .....	517
Set up the Vite project .....	517
Add Syncfusion Vue packages.....	518
Import Syncfusion CSS styles .....	519
Add Syncfusion Vue component.....	519
Run the project .....	520
See also .....	520
Types in Vue Avatar component.....	521
Avatar size .....	521
Avatar types .....	522
How To .....	523
Avatar customization in Vue Avatar component.....	523
Integrate avatar into listview in Vue Avatar component.....	529
Integrate avatar into badge in Vue Avatar component.....	532
Badge .....	536
Getting Started with the Vue Badge Component in Vue 2 .....	536
Prerequisites .....	536
Setting up the Vue 2 project .....	536
Add Syncfusion Vue packages.....	537
Import Syncfusion CSS styles .....	537
Run the project .....	539
See Also .....	539
Getting Started with the Vue Badge Component in Vue 3 .....	539
Prerequisites .....	539
Set up the Vite project .....	539
Add Syncfusion Vue packages.....	541
Import Syncfusion CSS styles .....	541
Add Syncfusion Vue component.....	541
Run the project .....	542
See also .....	542
Types in Vue Badge component .....	542
Badge styles .....	543
Badge types.....	546
How To .....	561

Badge customization in Vue Badge component .....	561
Integrate badge into listview in Vue Badge component.....	567
Dynamic badge content in Vue Badge component .....	571
Barcode .....	575
Getting Started with the Vue Barcode Component in Vue 2.....	575
Prerequisites .....	575
Dependencies.....	575
Setting up the Vue 2 project .....	576
Adding Syncfusion Vue packages.....	576
Add Syncfusion Vue component.....	577
Adding QR Generator control .....	579
Adding Datamatrix Generator control.....	581
Getting Started with Syncfusion Barcode Component in Vue 3 .....	582
Prerequisites .....	582
Creating Vue application using Vue CLI .....	582
Adding Syncfusion Barcode package in the application .....	583
Adding CSS reference for Syncfusion Vue Barcode component.....	583
Adding Syncfusion Vue Barcode component in the application.....	583
Running the application .....	586
Adding Syncfusion Vue QR Generator control in the application.....	587
Adding Syncfusion Vue Datamatrix Generator control in the application .....	588
BarcodeGenerator in Vue Barcode component .....	590
Code39 .....	590
Code39 Extended .....	591
Code 11 .....	592
Codabar .....	593
Code 32 .....	594
Code 93 .....	595
Code 93 Extended .....	596
Code 128 .....	596
Customizing the Barcode color .....	597
Customizing the Barcode dimension .....	598
Customizing the text .....	599
Qrcodegenerator in Vue Barcode component .....	600
QR Code .....	600

Customizing the Barcode color .....	601
Customizing the Barcode dimension .....	601
Customizing the text .....	602
Datamatrixgenerator in Vue Barcode component .....	603
Data Matrix .....	603
Customizing the Barcode color .....	604
Customizing the Barcode dimension .....	605
Customizing the text .....	606
Export in Vue Barcode component.....	607
Export.....	607
Breadcrumb .....	609
Getting Started with the Vue Breadcrumb Component in Vue 2 .....	609
Prerequisites .....	609
Dependencies.....	609
Setting up the Vue 2 project .....	609
Add Syncfusion Vue packages.....	610
Add Syncfusion Vue component.....	610
Run the project .....	611
Add Items to the Breadcrumb Component .....	612
Enable or Disable Navigation .....	612
Getting Started with the Vue Breadcrumb Component in Vue 3 .....	614
Prerequisites .....	614
Set up the Vite project .....	614
Add Syncfusion Vue packages.....	616
Import Syncfusion CSS styles .....	616
Add Syncfusion Vue component.....	616
Run the project .....	619
See also .....	619
Data binding in Vue Breadcrumb component .....	620
Items as tag directive .....	620
Items based on current URL.....	620
Static URL .....	621
Customize text when generated items using Url.....	622
Icons in Vue Breadcrumb component .....	622
Loading Icons in Breadcrumb Item .....	622

Icon Position.....	625
Icon only.....	627
Show icon only for first item.....	629
Navigation in Vue Breadcrumb component .....	630
URL .....	630
Enable navigation for last Breadcrumb item .....	632
Open URL in new page or tab .....	633
Template in Vue Breadcrumb component .....	634
Item Template.....	634
Separator Template .....	635
Customize Specific Item Template.....	637
Overflow in Vue Breadcrumb component.....	638
Collapsed.....	640
Menu.....	641
Wrap.....	642
Scroll.....	642
Hidden.....	643
None.....	644
Accessibility in Vue Breadcrumb component .....	644
WAI-ARIA attributes.....	645
Keyboard interaction .....	645
Ensuring accessibility .....	646
See also .....	646
Bullet Chart .....	646
Getting Started with the Vue Bullet chart Component in Vue 2 .....	646
Prerequisites .....	646
Dependencies.....	646
Setting up the Vue 2 project .....	647
Add Syncfusion Vue packages.....	647
Add Syncfusion Vue component.....	648
Run the project .....	649
Module Injection.....	649
BulletChart With Data .....	649
Add Bullet Chart Title.....	650
Ranges.....	651

Tooltip .....	652
Getting Started with the Vue Bullet Chart Component in Vue 3 .....	653
Prerequisites .....	653
Set up the Vite project .....	653
Add Syncfusion Vue packages.....	654
Add Syncfusion Vue component.....	655
Run the project .....	658
See also .....	658

## Syncfusion Vue UI Components (Essential JS 2)

Syncfusion Vue is a modern UI Components library that has been built from the ground up to be lightweight, responsive, modular and touch friendly. It also includes complete support for Angular, React, ASP.NET MVC and ASP.NET Core frameworks.

### Components list

The Syncfusion Vue UI components are listed below.

<style>

### table

```
{
border:0 !important;
line-height: 2!important;
}
tr
{
border:0 !important;
}
td
{
border:0 !important;
vertical-align: top;
}
.controlanchorlink
{
text-decoration: none!important;
font-size: 14px!important;
text-align: left!important;
padding: 5px 0px;
letter-spacing: 1px;
}
.controlcategory
{
font-size: 14px!important;
text-align: left!important;
```

font-weight: bold!important;

letter-spacing: 0.7px;

}

}

</style>

	DATA VISUALIZATION	CALENDARS	DROPDOWNS
			<a href="#">AutoComplete</a>

			<a href="#">Message</a>

## How to best read this user guide

- The best way to get started would be to read the "Getting Started" section of the documentation for the component that you would like to start using first. The "Getting Started" guide gives just enough information that you need to know before starting to write code. This is the only section that we recommend reading end-to-end before starting to write code, all other information can be referred as needed.
- Now that you are familiar with the basics of using the component, the next step would be to start integrating the component into your application. A good starting point would be to refer to the code snippets in the [online sample browser](#) which contains hundreds of code samples, it is very likely that you will find a code sample that resembles your intended usage scenario.
- Another valuable resource is the API reference which provides detailed information on the object hierarchy as well as the settings available on every object.

## Getting help

If you are still not able to find the information that you are looking for at the self-help resources mentioned above then please contact us by creating a support ticket in our support site, or ask your query in StackOverflow with tag `syncfusion-ej2`.

Note: Syncfusion does not collect any kind of information when our components are used in customer applications.

## See also

- [Product Development Life Cycle](#)

- [Getting Started with Syncfusion Vue UI Components in Vue 3](#)

## System Requirements for Vue UI Components

This section explains the basic system requirements to work with Syncfusion Vue UI components.

- Vue supported version  $\geq 2.6+$ .
- Required [node](#) version  $\geq 16+$ , and the supported [npm](#) version will be installed along with the node version. Use the following command to check the node's version.

```
`bash
```

```
node --version
```

```
`
```

The [vue-class-components](#) package is required before the 2023 Volume 1 (v21.1.35) release.

- \* **Vue 2.6** - Use the **7.2.6** version.
- \* **Vue 2.7** - This package is not needed.
- \* **Vue 3+** - Use **^8.0.0-rc.1** version.

## Browser support

The Syncfusion Vue UI components are supported only in modern browsers. For more information, refer to the [browser compatibility](#) section.

## Vue supported versions

The following table represents the supported Vue versions by different Syncfusion Vue UI components releases.

Version	Syncfusion Vue components version
-----	-----
<a href="#">Vue v2.7</a>	20.3.47 and above
<a href="#">Vue v3.0</a>	19.2.44 and above

## Browser Support

The Syncfusion Essential JS 2 components are supported only in modern browsers. This includes the following versions.

Chrome	Firefox	Opera	Edge	IE	Safari	iOS	Android	Windows Mobile
-----	-----	-----	-----	-----	-----	-----	-----	-----
Latest	Latest	Latest	13 +	11 +	9 +	9 +	4.4 +	IE 11 +

## Required polyfills

The following polyfills are required to run Essential JS 2 components in each browser.

Browser	Polyfills
-----	-----
Chrome(latest), Firefox(latest), Opera(latest), Edge, Safari 9+	NONE
IE 11	ES6 Promise

The Syncfusion Essential JS 2 components are supported in IE 11 browser with ES6 Promise polyfill.

## Using CDN

To add ES6 Promise polyfill using a CDN, include this in your HTML file.

```
`ts
```

```
<!-- Automatically provides/replaces Promise if missing or broken. -->
```

```
<script src="https://cdn.jsdelivr.net/npm/es6-promise@4/dist/es6-promise.js"></script>
```

```
<script src="https://cdn.jsdelivr.net/npm/es6-promise@4/dist/es6-promise.auto.js"></script>
```

```
<!-- Minified version of es6-promise-auto below. -->
```

```
<script src="https://cdn.jsdelivr.net/npm/es6-promise@4/dist/es6-promise.min.js"></script>
<script src="https://cdn.jsdelivr.net/npm/es6-promise@4/dist/es6-promise.auto.min.js"></script>
`
```

## Node.js

ES6 Promise polyfill can also be installed on the node.js.

To install:

```
`ts
yarn add es6-promise
(or)
npm install es6-promise
`
```

To Use:

```
`ts
var Promise = require('es6-promise').Promise;
`
```

For further details, refer to the link [here](#).

## Getting started

### Vue 3

Getting Started with Vue UI Components with JavaScript and Composition API

This article provides a step-by-step guide for setting up a [Vite](#) project with a JavaScript environment and integrating the Syncfusion Vue components using the [Composition API](#).

The **Composition API** is a new feature introduced in Vue.js 3 that provides an alternative way to organize and reuse component logic. It allows developers to write components as functions that use smaller, reusable functions called composition functions to manage their properties and behavior.

### Prerequisites

#### [System requirements for Syncfusion Vue UI components](#)

#### [Set up the Vite project](#)

A recommended approach for beginning with Vue is to scaffold a project using [Vite](#). To create a new Vite project, use one of the commands that are specific to either NPM or Yarn.

```
`bash
npm create vite@latest
`

or

`bash
yarn create vite
`
```

`

Using one of the above commands will lead you to set up additional configurations for the project as below:

1. Define the project name: We can specify the name of the project directly. Let's specify the name of the project as `my-project` for this article.

```
`bash
```

```
? Project name: » my-project
```

`

2. Select `Vue` as the framework. It will create a Vue 3 project.

```
`bash
```

```
? Select a framework: » - Use arrow-keys. Return to submit.
```

```
Vanilla
```

```
Vue
```

```
React
```

```
Preact
```

```
Lit
```

```
Svelte
```

```
Others
```

`

3. Choose `JavaScript` as framework variant to build this Vite project using JavaScript and Vue.

```
`bash
```

```
? Select a variant: » - Use arrow-keys. Return to submit.
```

```
JavaScript
```

```
TypeScript
```

```
Customize with create-vue ↗
```

```
Nuxt ↗
```

`

4. Upon completing the aforementioned steps to create the `my-project`, run the following command to install its dependencies:

```
`bash
```

```
cd my-project
```

```
npm install
```

`

or

```
`bash
cd my-project
yarn install
`
```

Now that **my-project** is ready to run with default settings, let's add Syncfusion components to the project.

#### *Add Syncfusion Vue packages*

Syncfusion Vue component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion Vue components in the project, install the corresponding npm package.

This article uses the [Vue Grid component](#) as an example. To use the Vue Grid component in the project, the `@syncfusion/ej2-vue-grids` package needs to be installed using the following command:

```
`bash
npm install @syncfusion/ej2-vue-grids --save
`
```

or

```
`bash
yarn add @syncfusion/ej2-vue-grids
`
```

#### *Import Syncfusion CSS styles*

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, CRG and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to themes in a Vue project.

In this article, **Material** theme is applied using CSS styles, which are available in installed packages. The necessary **Material** CSS styles for the Grid component and its dependents were imported into the `<style>` section of **src/App.vue** file.

#### ~/SRC/APP.VUE

```
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-calendars/styles/material.css";
@import "../node_modules/@syncfusion/ej2-dropdowns/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
@import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
@import "../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-grids/styles/material.css";
</style>
```

The order of importing CSS styles should be in line with its dependency graph.

### Add Syncfusion Vue component

Follow the below steps to add the Vue Grid component using **Composition API**:

1.First, add the **setup** attribute to the **script** tag to indicate that Vue will be using the **Composition API**. And import the Grid component in the **script** section of the **src/App.vue** file.

#### ~/SRC/APP.VUE

```
<script setup>
import { GridComponent as EjsGrid, ColumnsDirective as EColumns,
ColumnDirective as EColumn } from '@syncfusion/ej2-vue-grids';
</script>
```

2.In the **template** section, define the Grid component with the [dataSource](#) property and column definitions.

#### ~/SRC/APP.VUE

```
<template>
<ejs-grid :dataSource='data'>
<e-columns>
<e-column field='OrderID' width='100' textAlign="Right"></e-column>
<e-column field='CustomerID' width='100'></e-column>
<e-column field='EmployeeID' width='100' textAlign="Right"></e-column>
<e-column field='Freight' width='100' format="C2" textAlign="Right"></e-
column>
<e-column field='ShipCountry' width='100'></e-column>
</e-columns>
</ejs-grid>
</template>
```

3.Declare the values for the **dataSource** property in the **script** section.

#### ~/SRC/APP.VUE

```
<script setup>
const data = [
{
OrderID: 10248, CustomerID: 'VINET', EmployeeID: 5, ShipCountry: 'France',
Freight: 32.38
},
{
OrderID: 10249, CustomerID: 'TOMSP', EmployeeID: 6, ShipCountry: 'Germany',
Freight: 11.61
},
{
OrderID: 10250, CustomerID: 'HANAR', EmployeeID: 4, ShipCountry: 'Brazil',
Freight: 65.83
}
];
</script>
```

Here is the summarized code for the above steps in the **src/App.vue** file:

#### ~/SRC/APP.VUE

```

<template>
<ejs-grid :dataSource='data'>
<e-columns>
<e-column field='OrderID' width='100' textAlign="Right"></e-column>
<e-column field='CustomerID' width='100'></e-column>
<e-column field='EmployeeID' width='100' textAlign="Right"></e-column>
<e-column field='Freight' width='100' format="C2" textAlign="Right"></e-column>
<e-column field='ShipCountry' width='100'></e-column>
</e-columns>
</ejs-grid>
</template>
<script setup>
import { GridComponent as EjsGrid, ColumnsDirective as EColumns,
ColumnDirective as EColumn } from '@syncfusion/ej2-vue-grids';
const data = [
{
OrderID: 10248, CustomerID: 'VINET', EmployeeID: 5, ShipCountry: 'France',
Freight: 32.38
},
{
OrderID: 10249, CustomerID: 'TOMSP', EmployeeID: 6, ShipCountry: 'Germany',
Freight: 11.61
},
{
OrderID: 10250, CustomerID: 'HANAR', EmployeeID: 4, ShipCountry: 'Brazil',
Freight: 65.83
}
];
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-calendars/styles/material.css";
@import "../node_modules/@syncfusion/ej2-dropdowns/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
@import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
@import "../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-grids/styles/material.css";
</style>

```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run dev
```

```
,
```

or

```
`bash
```

```
yarn run dev
```

```
,
```

The output will appear as follows:

OrderID	CustomerID	EmployeeID	Freight	ShipCountry
10248	VINET	5	\$32.38	France
10249	TOMSP	6	\$11.61	Germany
10250	HANAR	4	\$65.83	Brazil

### Getting Started with Vue UI Components with TypeScript and Composition API

This article provides a step-by-step guide for setting up a [Vite](#) project with a TypeScript environment and integrating the Syncfusion Vue components using the [Composition API](#).

The **Composition API** is a new feature introduced in Vue.js 3 that provides an alternative way to organize and reuse component logic. It allows developers to write components as functions that use smaller, reusable functions called composition functions to manage their properties and behavior.

#### *Prerequisites*

#### [System requirements for Syncfusion Vue UI components](#)

#### *Set up the Vite project*

A recommended approach for beginning with Vue is to scaffold a project using [Vite](#). To create a new Vite project, use one of the commands that are specific to either NPM or Yarn.

```
`bash
```

```
npm create vite@latest
```

```
,
```

or

```
`bash
```

```
yarn create vite
```

```
,
```

Using one of the above commands will lead you to set up additional configurations for the project:

1. Define the project name: We can specify the name of the project directly. Let's specify the name of the project as **my-project** for this article.

```
`bash
```

```
? Project name: » my-project
```

```
,
```

2. Select **Vue** as the framework. It will create a Vue 3 project.

```
`bash
```

```
? Select a framework: » - Use arrow-keys. Return to submit.
```

```
Vanilla
```

```
Vue
```

```
React
```

```
Preact
```

```
Lit
```

```
Svelte
```

```
Others
```

```
,
```

3. Choose **TypeScript** as framework variant to build this Vite project using TypeScript and Vue.

```
`bash
```

```
? Select a variant: » - Use arrow-keys. Return to submit.
```

```
JavaScript
```

```
TypeScript
```

```
Customize with create-vue ↗
```

```
Nuxt ↗
```

```
,
```

4. Upon completing the aforementioned steps to create the **my-project**, run the following command to install its dependencies:

```
`bash
```

```
cd my-project
```

```
npm install
```

```
,
```

```
or
```

```
`bash
```

```
cd my-project
```

```
yarn install
```

```
,
```

Now that **my-project** is ready to run with default settings, let's add Syncfusion components to the project.

#### *Add Syncfusion Vue packages*

Syncfusion Vue component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion Vue components in the project, install the corresponding npm package.

This article uses the [Vue Schedule component](#) as an example. To use the Vue Schedule component in the project, the `@syncfusion/ej2-vue-schedule` package needs to be installed using the following command:

```
`bash
npm install @syncfusion/ej2-vue-schedule --save
```

or

```
`bash
yarn add @syncfusion/ej2-vue-schedule
```

### *Import Syncfusion CSS styles*

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, CRG and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to themes in a Vue project.

In this article, **Material** theme is applied using CSS styles, which are available in installed packages. The necessary **Material** CSS styles for the Schedule component and its dependents were imported into the `<style>` section of `src/App.vue` file.

### ~/SRC/APP.VUE

```
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
@import '../node_modules/@syncfusion/ej2-calendars/styles/material.css';
@import '../node_modules/@syncfusion/ej2-dropdowns/styles/material.css';
@import '../node_modules/@syncfusion/ej2-inputs/styles/material.css';
@import '../node_modules/@syncfusion/ej2-navigations/styles/material.css';
@import '../node_modules/@syncfusion/ej2-popups/styles/material.css';
@import '../node_modules/@syncfusion/ej2-vue-schedule/styles/material.css';
</style>
```

The order of importing CSS styles should be in line with its dependency graph.

### *Add Syncfusion Vue component*

Follow the below steps to add the Vue Schedule component using **Composition API**:

1.First, add the `setup` attribute to the `script` tag to indicate that Vue will be using the Composition API. And import the Schedule component in the `script` section of the `src/App.vue` file.

### ~/SRC/APP.VUE

```
<script setup>
import { ScheduleComponent as EjsSchedule, ViewsDirective as EViews,
ViewDirective as EView, ResourcesDirective as EResources, ResourceDirective
as EResource, EventSettingsModel, Day, Week, WorkWeek, Month, Agenda,
DragAndDrop, Resize } from "@syncfusion/ej2-vue-schedule";
</script>
```

2. In the `template` section, define the Schedule component with appointments. To populate the empty Scheduler with appointments, define either the local JSON data or remote data through the [dataSource](#) property available within the [eventSettings](#) option. Additionally, it is necessary to include the start and end time fields to define any appointments.

#### ~/SRC/APP.VUE

```
<template>
<div id='app'>
<ejs-schedule height='550px' width='100%' :selectedDate='selectedDate'
:eventSettings='eventSettings'>
<e-views>
<e-view option='Day'></e-view>
<e-view option='Week' startHour='07:00' endHour='15:00'></e-view>
<e-view option='WorkWeek' startHour='10:00' endHour='18:00'></e-view>
<e-view option='Month' showWeekend=false></e-view>
<e-view option='Agenda'></e-view>
</e-views>
<e-resources>
<e-resource field="OwnerId" title="Owner" name="Owners"
:dataSource="ownerDataSource" textField="OwnerText"
idField="Id" colorField="OwnerColor">
</e-resource>
</e-resources>
</ejs-schedule>
</div>
</template>
```

3. Declare the values for the `dataSource` property in the `script` section.

#### ~/SRC/APP.VUE

```
<script setup>
const eventSettings: EventSettingsModel = {
dataSource: [
{
Id: 1,
Subject: 'Surgery - Andrew',
EventType: 'Confirmed',
StartTime: new Date(2021, 7, 10, 9, 0),
EndTime: new Date(2021, 7, 10, 10, 0),
OwnerId: 2
},
{
Id: 2,
Subject: 'Consulting - John',
EventType: 'Confirmed',
StartTime: new Date(2021, 7, 11, 10, 0),
EndTime: new Date(2021, 7, 11, 11, 30),
OwnerId: 3
},
{
Id: 3,
Subject: 'Therapy - Robert',
EventType: 'Requested',
StartTime: new Date(2021, 7, 12, 11, 30),
```

```
EndTime: new Date(2021, 7, 12, 12, 30),
OwnerId: 1
}
]
};
</script>
```

4.To generate a Schedule with particular views, need to inject the relevant modules into the Schedule. This can be accomplished by utilizing the `provide` method within the `src/App.vue` file.

#### ~/SRC/APP.VUE

```
<script setup lang="ts">
import { provide } from "vue";
provide('schedule', [Day, Week, WorkWeek, Month, Agenda, DragAndDrop,
Resize]);
</script>
```

Here is the summarized code for the above steps in the `src/App.vue` file:

#### ~/SRC/APP.VUE

```
<template>
<div id='app'>
<ejs-schedule height='550px' width='100%' :selectedDate='selectedDate'
:eventSettings='eventSettings'>
<e-views>
<e-view option='Day'></e-view>
<e-view option='Week' startHour='07:00' endHour='15:00'></e-view>
<e-view option='WorkWeek' startHour='10:00' endHour='18:00'></e-view>
<e-view option='Month' showWeekend=false></e-view>
<e-view option='Agenda'></e-view>
</e-views>
<e-resources>
<e-resource field="OwnerId" title="Owner" name="Owners"
:dataSource="ownerDataSource" textField="OwnerText"
idField="Id" colorField="OwnerColor">
</e-resource>
</e-resources>
</ejs-schedule>
</div>
</template>
<script setup lang="ts">
import { ScheduleComponent as EjsSchedule, Day, Week, WorkWeek, Month,
Agenda, DragAndDrop, Resize, ViewsDirective as EViews, ViewDirective as
EView, ResourcesDirective as EResources, ResourceDirective as EResource }
from "@syncfusion/ej2-vue-schedule";
import { provide } from "vue";
provide('schedule', [Day, Week, WorkWeek, Month, Agenda, DragAndDrop,
Resize]);
const selectedDate: Date = new Date(2021, 7, 12);
const allowMultiple: boolean = true;
const ownerDataSource: Record<string, any>[] = [
{ OwnerText: 'Nancy', Id: 1, OwnerColor: '#ffaa00' },
{ OwnerText: 'Steven', Id: 2, OwnerColor: '#f8a398' },
{ OwnerText: 'Michael', Id: 3, OwnerColor: '#7499e1' }];
```

```

const eventSettings: EventSettingsModel = {
  dataSource: [
    {
      Id: 1,
      Subject: 'Surgery - Andrew',
      EventType: 'Confirmed',
      StartTime: new Date(2021, 7, 10, 9, 0),
      EndTime: new Date(2021, 7, 10, 10, 0),
      OwnerId: 2
    },
    {
      Id: 2,
      Subject: 'Consulting - John',
      EventType: 'Confirmed',
      StartTime: new Date(2021, 7, 11, 10, 0),
      EndTime: new Date(2021, 7, 11, 11, 30),
      OwnerId: 3
    },
    {
      Id: 3,
      Subject: 'Therapy - Robert',
      EventType: 'Requested',
      StartTime: new Date(2021, 7, 12, 11, 30),
      EndTime: new Date(2021, 7, 12, 12, 30),
      OwnerId: 1
    }
  ]
};
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
@import '../node_modules/@syncfusion/ej2-calendars/styles/material.css';
@import '../node_modules/@syncfusion/ej2-dropdowns/styles/material.css';
@import '../node_modules/@syncfusion/ej2-inputs/styles/material.css';
@import '../node_modules/@syncfusion/ej2-navigations/styles/material.css';
@import '../node_modules/@syncfusion/ej2-popups/styles/material.css';
@import '../node_modules/@syncfusion/ej2-vue-schedule/styles/material.css';
</style>

```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run dev
```

```
`
```

or

```
`bash
```

```
yarn run dev
```

```
`
```

The output will appear as follows:

<	>	August 08 - 14, 2021	TODAY	DAY	WEEK	WORK WEEK	MONTH	⋮
	Sun 8	Mon 9	Tue 10	Wed 11	Thu 12	Fri 13	Sat 14	
9:00 AM			Surgery - Andrew 9:00 AM - ...					
10:00 AM				Consultin g - John 10:00 AM...				
11:00 AM

### Getting Started with Vue UI Components with JavaScript and Options API

This article provides a step-by-step guide for setting up a [Vite](#) project with a JavaScript environment and integrating the Syncfusion Vue components using the [Options API](#).

The **Options API** is the traditional way of writing Vue.js components, where the component logic is organized into a series of options that define the component's properties and behavior. These options include data, methods, computed properties, watchers, lifecycle hooks, and more.

#### *Prerequisites*

#### [System requirements for Syncfusion Vue UI components](#)

#### *Set up the Vite project*

A recommended approach for beginning with Vue is to scaffold a project using [Vite](#). To create a new Vite project, use one of the commands that are specific to either NPM or Yarn.

```
`bash
```

```
npm create vite@latest
```

```
,
```

or

```
`bash
```

```
yarn create vite
```

```
,
```

Using one of the above commands will lead you to set up additional configurations for the project as below:

1. Define the project name: We can specify the name of the project directly. Let's specify the name of the project as `my-project` for this article.

```
`bash
```

```
? Project name: » my-project
```

```
,
```

2. Select **Vue** as the framework. It will create a Vue 3 project.

```
`bash
```

```
? Select a framework: » - Use arrow-keys. Return to submit.
```

```
Vanilla
```

```
Vue
```

```
React
```

```
Preact
```

```
Lit
```

```
Svelte
```

```
Others
```

```
,
```

3. Choose **JavaScript** as framework variant to build this Vite project using JavaScript and Vue.

```
`bash
```

```
? Select a variant: » - Use arrow-keys. Return to submit.
```

```
JavaScript
```

```
TypeScript
```

```
Customize with create-vue ↗
```

```
Nuxt ↗
```

```
,
```

4. Upon completing the aforementioned steps to create the **my-project**, run the following command to install its dependencies:

```
`bash
```

```
cd my-project
```

```
npm install
```

```
,
```

```
or
```

```
`bash
```

```
cd my-project
```

```
yarn install
```

```
,
```

Now that `my-project` is ready to run with default settings, let's add Syncfusion components to the project.

#### Add Syncfusion Vue packages

Syncfusion Vue component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion Vue components in the project, install the corresponding npm package.

This article uses the [Vue Grid component](#) as an example. To use the Vue Grid component in the project, the `@syncfusion/ej2-vue-grids` package needs to be installed using the following command:

```
`bash
```

```
npm install @syncfusion/ej2-vue-grids --save
```

```
,
```

```
or
```

```
`bash
```

```
yarn add @syncfusion/ej2-vue-grids
```

```
,
```

#### Import Syncfusion CSS styles

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, CRG and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to themes in a Vue project.

In this article, Material theme is applied using CSS styles, which are available in installed packages. The necessary Material CSS styles for the Grid component and its dependents were imported into the `<style>` section of `src/App.vue` file.

#### ~/SRC/APP.VUE

```
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-calendars/styles/material.css";
@import "../node_modules/@syncfusion/ej2-dropdowns/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
@import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
@import "../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-grids/styles/material.css";
</style>
```

The order of importing CSS styles should be in line with its dependency graph.

#### Add Syncfusion Vue component

Follow the below steps to add the Vue Grid component using Options API:

1.First, import the Grid component in the `script` section of the `src/App.vue` file.

#### ~/SRC/APP.VUE

```
<script>
```

```
import { GridComponent, ColumnsDirective, ColumnDirective } from
 '@syncfusion/ej2-vue-grids';
</script>
```

2.The next step is to register the Grid component and its child directives in Vue.

#### ~/SRC/APP.VUE

```
import { GridComponent, ColumnsDirective, ColumnDirective } from
 '@syncfusion/ej2-vue-grids';
//Component registration
export default {
  name: "App",
  components: {
    'ejs-grid': GridComponent,
    'e-columns': ColumnsDirective,
    'e-column': ColumnDirective
  }
}
```

3.In the **template** section, define the Grid component with the [dataSource](#) property and column definitions.

#### ~/SRC/APP.VUE

```
<template>
<ejs-grid :dataSource='data'>
<e-columns>
<e-column field='OrderID' width='100' textAlign="Right"></e-column>
<e-column field='CustomerID' width='100'></e-column>
<e-column field='EmployeeID' width='100' textAlign="Right"></e-column>
<e-column field='Freight' width='100' format="C2" textAlign="Right"></e-
column>
<e-column field='ShipCountry' width='100'></e-column>
</e-columns>
</ejs-grid>
</template>
```

4.Declare the values for the **dataSource** property in the **script** section.

#### ~/SRC/APP.VUE

```
data() {
  return {
    data:[
      {
        OrderID: 10248, CustomerID: 'VINET', EmployeeID: 5, ShipCountry: 'France',
        Freight: 32.38
      },
      {
        OrderID: 10249, CustomerID: 'TOMSP', EmployeeID: 6, ShipCountry: 'Germany',
        Freight: 11.61
      },
      {
        OrderID: 10250, CustomerID: 'HANAR', EmployeeID: 4, ShipCountry: 'Brazil',
        Freight: 65.83
      }
    ]
  }
}
```

```

}
],
};
}

```

Here is the summarized code for the above steps in the **src/App.vue** file:

### ~/SRC/APP.VUE

```

<template>
<ejs-grid :dataSource='data'>
<e-columns>
<e-column field='OrderID' width='100' textAlign="Right"></e-column>
<e-column field='CustomerID' width='100'></e-column>
<e-column field='EmployeeID' width='100' textAlign="Right"></e-column>
<e-column field='Freight' width='100' format="C2" textAlign="Right"></e-
column>
<e-column field='ShipCountry' width='100'></e-column>
</e-columns>
</ejs-grid>
</template>
<script>
import { GridComponent, ColumnsDirective, ColumnDirective } from
'@syncfusion/ej2-vue-grids';
// Component registration
export default {
name: "App",
// Declaring component and its directives
components: {
'ejs-grid': GridComponent,
'e-columns': ColumnsDirective,
'e-column': ColumnDirective
},
// Bound properties declarations
data() {
return {
data:[
{
OrderID: 10248, CustomerID: 'VINET', EmployeeID: 5, ShipCountry: 'France',
Freight: 32.38
},
{
OrderID: 10249, CustomerID: 'TOMSP', EmployeeID: 6, ShipCountry: 'Germany',
Freight: 11.61
},
{
OrderID: 10250, CustomerID: 'HANAR', EmployeeID: 4, ShipCountry: 'Brazil',
Freight: 65.83
}
],
};
};
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";

```

```
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-calendars/styles/material.css";
@import "../node_modules/@syncfusion/ej2-dropdowns/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
@import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
@import "../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-grids/styles/material.css";
</style>
```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run dev
```

```
,
```

or

```
`bash
```

```
yarn run dev
```

```
,
```

The output will appear as follows:

OrderID	CustomerID	EmployeeID	Freight	ShipCountry
10248	VINET	5	\$32.38	France
10249	TOMSP	6	\$11.61	Germany
10250	HANAR	4	\$65.83	Brazil

### Getting Started with Vue UI Components with TypeScript and Options API

This article provides a step-by-step guide for setting up a [Vite](#) project with a TypeScript environment and integrating the Syncfusion Vue components using the [Options API](#).

The **Options API** is the traditional way of writing Vue.js components, where the component logic is organized into a series of options that define the component's properties and behavior. These options include data, methods, computed properties, watchers, lifecycle hooks, and more.

### Prerequisites

#### [System requirements for Syncfusion Vue UI components](#)

*Set up the Vite project*

A recommended approach for beginning with Vue is to scaffold a project using [Vite](#). To create a new Vite project, use one of the commands that are specific to either NPM or Yarn.

```
`bash
```

```
npm create vite@latest
```

```
,
```

or

```
`bash
```

```
yarn create vite
```

```
,
```

Using one of the above commands will lead you to set up additional configurations for the project:

1. Define the project name: We can specify the name of the project directly. Let's specify the name of the project as **my-project** for this article.

```
`bash
```

```
? Project name: » my-project
```

```
,
```

2. Select **Vue** as the framework. It will create a Vue 3 project.

```
`bash
```

```
? Select a framework: » - Use arrow-keys. Return to submit.
```

```
Vanilla
```

```
Vue
```

```
React
```

```
Preact
```

```
Lit
```

```
Svelte
```

```
Others
```

```
,
```

3. Choose **TypeScript** as framework variant to build this Vite project using TypeScript and Vue.

```
`bash
```

```
? Select a variant: » - Use arrow-keys. Return to submit.
```

```
JavaScript
```

```
TypeScript
```

```
Customize with create-vue ↗
```

```
Nuxt ↗
```

4. Upon completing the aforementioned steps to create the `my-project`, run the following command to install its dependencies:

```
`bash
cd my-project
npm install
```

or

```
`bash
cd my-project
yarn install
```

Now that `my-project` is ready to run with default settings, let's add Syncfusion components to the project.

#### *Add Syncfusion Vue packages*

Syncfusion Vue component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion Vue components in the project, install the corresponding npm package.

This article uses the [Vue Schedule component](#) as an example. To use the Vue Schedule component in the project, the `@syncfusion/ej2-vue-schedule` package needs to be installed using the following command:

```
`bash
npm install @syncfusion/ej2-vue-schedule --save
```

or

```
`bash
yarn add @syncfusion/ej2-vue-schedule
```

#### *Import Syncfusion CSS styles*

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, CRG and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to themes in a Vue project.

In this article, `Material` theme is applied using CSS styles, which are available in installed packages. The necessary `Material` CSS styles for the Schedule component and its dependents were imported into the `<style>` section of `src/App.vue` file.

To import the necessary CSS styles for the Schedule component, as well as its dependent styles, into the `src/App.vue` file, you can use the provided code snippet within the `<style>` section. Let's import the `Material` theme for the Schedule component.

~/SRC/APP.VUE

```
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
@import '../node_modules/@syncfusion/ej2-calendars/styles/material.css';
@import '../node_modules/@syncfusion/ej2-dropdowns/styles/material.css';
@import '../node_modules/@syncfusion/ej2-inputs/styles/material.css';
@import '../node_modules/@syncfusion/ej2-navigations/styles/material.css';
@import '../node_modules/@syncfusion/ej2-popups/styles/material.css';
@import '../node_modules/@syncfusion/ej2-vue-schedule/styles/material.css';
</style>
```

The order of importing CSS styles should be in line with its dependency graph.

*Add Syncfusion Vue component*

Follow the below steps to add the Vue Schedule component using Options API:

1.First, import the Schedule component in the **script** section of the **src/App.vue** file.

~/SRC/APP.VUE

```
<script>
import { ScheduleComponent as EjsSchedule, ViewsDirective as EViews,
ViewDirective as EView, ResourcesDirective as EResources, ResourceDirective
as EResource, EventSettingsModel, Day, Week, WorkWeek, Month, Agenda,
DragAndDrop, Resize } from '@syncfusion/ej2-vue-schedule';
</script>
```

2.The next step is to register the Schedule component and its child directives in Vue.

~/SRC/APP.VUE

```
import { ScheduleComponent, ViewsDirective, ViewDirective,
ResourcesDirective, ResourceDirective, EventSettingsModel, Day, Week,
WorkWeek, Month, Agenda, DragAndDrop, Resize } from '@syncfusion/ej2-vue-
schedule';
//Component registration
export default {
name: 'App',
// Declaring component and its directives
components: {
'ejs-schedule': ScheduleComponent,
'e-views': ViewsDirective,
'e-view': ViewDirective,
'e-resources': ResourcesDirective,
'e-resource': ResourceDirective
}
}
```

3.In the **template** section, define the Schedule component with appointments. To populate the empty Scheduler with appointments, define either the local JSON data or remote data through the [dataSource](#) property available within the [eventSettings](#) option. Additionally, it is necessary to include the start and end time fields to define any appointments.

~/SRC/APP.VUE

```

<template>
<div id='app'>
<ejs-schedule height='550px' width='100%' :selectedDate='selectedDate'
:eventSettings='eventSettings'>
<e-views>
<e-view option='Day'></e-view>
<e-view option='Week' startHour='07:00' endHour='15:00'></e-view>
<e-view option='WorkWeek' startHour='10:00' endHour='18:00'></e-view>
<e-view option='Month' showWeekend=false></e-view>
<e-view option='Agenda'></e-view>
</e-views>
<e-resources>
<e-resource field="OwnerId" title="Owner" name="Owners"
:datasource="ownerDataSource" textField="OwnerText"
idField="Id" colorField="OwnerColor">
</e-resource>
</e-resources>
</ejs-schedule>
</div>
</template>

```

4. Declare the values for the `dataSource` property in the `script` section.

~/SRC/APP.VUE

```

<script lang="ts">
export default {
name: "App",
...
data() {
return {
...
eventSettings: {
dataSource: [
{
Id: 1,
Subject: 'Surgery - Andrew',
EventType: 'Confirmed',
StartTime: new Date(2021, 7, 10, 9, 0),
EndTime: new Date(2021, 7, 10, 10, 0),
OwnerId: 2
},
{
Id: 2,
Subject: 'Consulting - John',
EventType: 'Confirmed',
StartTime: new Date(2021, 7, 11, 10, 0),
EndTime: new Date(2021, 7, 11, 11, 30),
OwnerId: 3
},
{
Id: 3,
Subject: 'Therapy - Robert',
EventType: 'Requested',
StartTime: new Date(2021, 7, 12, 11, 30),

```

```

EndTime: new Date(2021, 7, 12, 12, 30),
OwnerId: 1
}
]
} as EventSettingsModel,
};
}
...
};
</script>

```

5.To generate a Schedule with particular views, need to inject the relevant modules into the Schedule. This can be accomplished by utilizing the `provide` method within the `src/App.vue` file.

#### ~/SRC/APP.VUE

```

<script lang="ts">
export default {
name: "App",
...
provide: {
schedule: [Day, Week, WorkWeek, Month, Agenda, DragAndDrop, Resize]
}
};
</script>

```

Here is the summarized code for the above steps in the `src/App.vue` file:

#### ~/SRC/APP.VUE

```

<template>
<div id='app'>
<ejs-schedule height='550px' width='100%' :selectedDate='selectedDate'
:eventSettings='eventSettings'>
<e-views>
<e-view option='Day'></e-view>
<e-view option='Week' startHour='07:00' endHour='15:00'></e-view>
<e-view option='WorkWeek' startHour='10:00' endHour='18:00'></e-view>
<e-view option='Month' showWeekend=false></e-view>
<e-view option='Agenda'></e-view>
</e-views>
<e-resources>
<e-resource field="OwnerId" title="Owner" name="Owners"
:dataSource="ownerDataSource" textField="OwnerText"
idField="Id" colorField="OwnerColor">
</e-resource>
</e-resources>
</ejs-schedule>
</div>
</template>
<script lang="ts">
import { ScheduleComponent, ViewsDirective, ViewDirective,
ResourcesDirective, ResourceDirective, Day, Week, WorkWeek, Month, Agenda,
DragAndDrop, Resize, EventSettingsModel } from "@syncfusion/ej2-vue-
schedule";
export default {

```

```

name: "App",
// Declaring component and its directives
components: {
  'ejs-schedule': ScheduleComponent,
  'e-views': ViewsDirective,
  'e-view': ViewDirective,
  'e-resources': ResourcesDirective,
  'e-resource': ResourceDirective
},
// Bound properties declaration
data() {
  return {
    selectedDate: new Date(2021, 7, 12) as Date,
    allowMultiple: true as Boolean,
    ownerDataSource: [
      { OwnerText: 'Nancy', Id: 1, OwnerColor: '#ffaa00' },
      { OwnerText: 'Steven', Id: 2, OwnerColor: '#f8a398' },
      { OwnerText: 'Michael', Id: 3, OwnerColor: '#7499e1' }] as Record<string,
any>[],
    eventSettings: {
      dataSource: [
        {
          Id: 1,
          Subject: 'Surgery - Andrew',
          EventType: 'Confirmed',
          StartTime: new Date(2021, 7, 10, 9, 0),
          EndTime: new Date(2021, 7, 10, 10, 0),
          OwnerId: 2
        },
        {
          Id: 2,
          Subject: 'Consulting - John',
          EventType: 'Confirmed',
          StartTime: new Date(2021, 7, 11, 10, 0),
          EndTime: new Date(2021, 7, 11, 11, 30),
          OwnerId: 3
        },
        {
          Id: 3,
          Subject: 'Therapy - Robert',
          EventType: 'Requested',
          StartTime: new Date(2021, 7, 12, 11, 30),
          EndTime: new Date(2021, 7, 12, 12, 30),
          OwnerId: 1
        }
      ]
    } as EventSettingsModel,
  };
},
provide: {
  schedule: [Day, Week, WorkWeek, Month, Agenda, DragAndDrop, Resize]
};
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';

```

```
@import '../node_modules/@syncfusion/ej2-calendars/styles/material.css';
@import '../node_modules/@syncfusion/ej2-dropdowns/styles/material.css';
@import '../node_modules/@syncfusion/ej2-inputs/styles/material.css';
@import '../node_modules/@syncfusion/ej2-navigations/styles/material.css';
@import '../node_modules/@syncfusion/ej2-popups/styles/material.css';
@import '../node_modules/@syncfusion/ej2-vue-schedule/styles/material.css';
</style>
```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run dev
```

```
,
```

or

```
`bash
```

```
yarn run dev
```

```
,
```

The output will appear as follows:

<	>	August 08 - 14, 2021	TODAY	DAY	WEEK	WORK WEEK	MONTH	:
	Sun 8	Mon 9	Tue 10	Wed 11	Thu 12	Fri 13	Sat 14	
9:00 AM			Surgery - Andrew 9:00 AM - ...					
10:00 AM				Consultin g - John 10:00 AM...				
11:00 AM

- [Getting Started with Vue UI Components using Options API and JavaScript](#)

### Getting Started with Syncfusion Vue UI Components in Vue 3

This section explains how to use Syncfusion Vue components in Vue 3 application. To get started with Vue 2 application, refer to the [getting started with Vue 2](#) section.

#### Prerequisites

#### [System requirements for Syncfusion Vue UI components](#)

### Create the Vue 3 application

The best way to create a Vue 3 application is to use the [vue create](#) command.

```
`bash
npm install -g @vue/cli
vue create quickstart
cd quickstart
npm run serve
`
```

Initiating a new project prompts us to choose the type of project to be used for the current application. Select the option **Default ([Vue 3] babel, eslint)** from the menu.

```
E:\samples>vue create quickstart

Vue CLI v5.0.8
? Please pick a preset:
> Default ([Vue 3] babel, eslint)
  Default ([Vue 2] babel, eslint)
  Manually select features
```

### Add Syncfusion packages

Once the Vue 3 application is created, install the required Syncfusion Vue component package in the application. All the available Syncfusion Vue packages are published in the [npmjs.com](#) registry. Choose the component to be installed. In this article, the Grid component is used as an example.

Check out the [installation and upgrade](#) section to learn about the different ways of installing the packages. Here, the Grid component package is installed using the following **npm** command.

```
`bash
npm install @syncfusion/ej2-vue-grids --save
`
```

### Import the Syncfusion CSS styles

After installing the Syncfusion component packages in the application, add the required theme based on the components used.

Check out the [themes](#) section to know more about built-in themes and different ways (npm packages, CDN and CRG) to refer the themes in the Vue application.

Here the themes are referred through the installed npm packages which contains the built-in themes of Syncfusion Vue component. Let's import the **Material** theme for the Grid component and its dependencies to the **<style>** section of the **App.vue** file as follows.

#### ~/SRC/APP.VUE

```
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
```

```
@import "../node_modules/@syncfusion/ej2-calendars/styles/material.css";
@import "../node_modules/@syncfusion/ej2-dropdowns/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
@import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
@import "../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-grids/styles/material.css";
</style>
```

Grid components use other Syncfusion components as well, so CSS references for the dependent component must be added in order to use all grid functionalities. Use this same order to display the Syncfusion Grid component's predefined appearance.

#### *Register the Syncfusion Vue component*

Import the Grid component along with the required child directives from the installed packages into the `<script>` section of the `src/App.vue` file. Register the Grid component along with the required child directives using following code.

#### ~/SRC/APP.VUE

```
import { GridComponent, ColumnsDirective, ColumnDirective } from
'@syncfusion/ej2-vue-grids';
// Component registration
export default {
  name: "App",
  components: {
    'ejs-grid' : GridComponent,
    'e-columns' : ColumnsDirective,
    'e-column' : ColumnDirective
  }
}
```

Now, the Grid and column directives are registered to use it in this application.

#### *Add Syncfusion Vue component to the application*

Add the Vue Grid to the `<template>` section of the `App.vue` file in the `src` directory. To display the Grid with records, add the Grid component and bind the [dataSource](#) to it. Here, the simple data is mapped to the `dataSource` property.

#### ~/SRC/APP.VUE

```
<template>
<ejs-grid :dataSource="data">
<e-columns>
<e-column field="OrderID" headerText="Order ID" textAlign="Right"
:isPrimaryKey="true" width="100"></e-column>
<e-column field="CustomerID" headerText="Customer ID" width="80"></e-
column>
<e-column field="ShipCountry" headerText="Ship Country" width="90"></e-
column>
</e-columns>
</ejs-grid>
</template>
<script>
```

```

import { GridComponent, ColumnsDirective, ColumnDirective} from
"@syncfusion/ej2-vue-grids";
export default {
  name: "App",
  // Declaring component and its directives
  components: {
    "ejs-grid": GridComponent,
    "e-columns": ColumnsDirective,
    "e-column": ColumnDirective,
  },
  // Bound properties declarations
  data() {
    return {
      data: [
        {
          OrderID: 10248,
          CustomerID: "VINET",
          ShipCountry: "France",
        },
        {
          OrderID: 10249,
          CustomerID: "TOMSP",
          ShipCountry: "Germany",
        },
      ],
    };
  },
};
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-calendars/styles/material.css";
@import "../node_modules/@syncfusion/ej2-dropdowns/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
@import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
@import "../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-grids/styles/material.css";
</style>

```

### Run the application

Run the application using the following command.

```
`bash
```

```
npm run serve
```

```
`
```

Web server will be initiated. Open the quick start app in the browser at port `localhost:8080`.

Order ID	Customer ID	Ship Country
10248	VINET	France
10249	TOMSP	Germany

Refer the following sample, [vue3-grid-getting-started](#).

### Migration from Vue 2 to Vue 3

#### Registering Vue component

It is required to register the component and any child directives used within the component separately in Vue 3. The difference in registering components in Vue 2 and Vue 3 can be found below.

- Component registration in Vue 2

#### ~/SRC/APP.VUE

```
import * as Vue from 'vue';
import { GridPlugin } from '@syncfusion/ej2-vue-grids';
// Registering component and directives as a single plugin.
Vue.use(ButtonPlugin);
```

- Component registration in Vue 3

#### ~/SRC/APP.VUE

```
import { GridComponent, ColumnsDirective, ColumnDirective } from
 '@syncfusion/ej2-vue-grids';
//Component registration
export default {
  name: "App",
  components: {
    'ejs-grid' : GridComponent,
    'e-columns' : ColumnsDirective,
    'e-column' : ColumnDirective
  }
}
```

In the above code, `ejs-grid` denotes the Grid component tag, `e-columns` and `e-column` denotes the child column directives tag which is used for Column definition declaration.

Registering the child directives is not needed if they are not used.

#### Template usage:

Before using the template in the Vue application, enable the [runtime compiler](#). Create the `Vue.config.js` file in the root folder if it does not exist and add the following code

```
`js
module.exports = {
  runtimeCompiler: true
```

```

}
`

```

Due to changes in the [Vue 3 API](#), the registration of templates in Vue 3 is different from Vue 2.

Vue 2	Vue 3
declare templates using <code>Vue.component</code> module.	Use the <code>createApp</code> method from Vue to declare templates.

In template declaration, the component name must match the property binding name. In the following example, the Grid column `template` property is assigned with the name `colTemplate`.

#### ~/SRC/APP.VUE

```

<template>
<ejs-grid ref='grid' :dataSource="data" height=310 >
<e-columns>
<e-column headerText='Employee Name' width='150' textAlign='Center'
:template='colTemplate'></e-column>
<e-column field='EmployeeID' width='125' textAlign='Right'></e-column>
</e-columns>
</ejs-grid>
<template>
<script>
import { GridComponent, ColumnsDirective, ColumnDirective} from
"@syncfusion/ej2-vue-grids";
import { createApp } from "vue";
const app = createApp();
// Template declaration
var colVue = app.component('colTemplate', {
data: () => ({}),
template: `<b>Name:{{data.EmployeeID}}</b>`;
export default {
data() {
return {
data: [
{
EmployeeID: 10248,
EmployeeName: "VINET"
},
{
EmployeeID: 10249,
EmployeeName: "TOMSP"
},
],
colTemplate: function() {
return { template: colVue };
}
};
}
};
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";

```

```
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-calendars/styles/material.css";
@import "../node_modules/@syncfusion/ej2-dropdowns/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
@import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
@import "../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-grids/styles/material.css";
</style>
```

### Using Syncfusion Vue components inside template properties

To use other Syncfusion Vue components inside the templates, register the components in the template declaration also.

The following sample uses the Button component within the grid's template property. To use the Button component within the template, register the Button component in the template declaration.

#### ~/SRC/APP.VUE

```
<template>
<ejs-grid ref='grid' :dataSource="data">
<e-columns>
<e-column headerText='EmployeeName' width='150' textAlign='Center'
:template='colTemplate'></e-column>
<e-column field='EmployeeID' width='125' textAlign='Right'></e-column>
</e-columns>
</ejs-grid>
</template>
<script>
import { ButtonComponent } from "@syncfusion/ej2-vue-buttons";
import { GridComponent, ColumnsDirective, ColumnDirective } from
"@syncfusion/ej2-vue-grids";
import { createApp } from "vue";
const app = createApp();
// Template declaration
var colVue = app.component('colTemplate', {
data: () => ({}),
template: `
<ejs-Button cssClass="e-primary">{{data.EmployeeName}}</ejs-Button>`,
// Declaring component which is used inside template property
components: {
"ejs-Button" : ButtonComponent
}
});
export default {
name: 'Vue3-App',
components: {
"ejs-grid": GridComponent,
"e-columns": ColumnsDirective,
"e-column": ColumnDirective,
},
data() {
return {
data: [
{
EmployeeID: 10248,
```

```

EmployeeName: "VINET"
},
{
EmployeeID: 10249,
EmployeeName: "TOMSP"
},
],
colTemplate: function() {
return { template: colVue };
}
};
}
};
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-calendars/styles/material.css";
@import "../node_modules/@syncfusion/ej2-dropdowns/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
@import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
@import "../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-grids/styles/material.css";
</style>

```

## Vue 2

### Getting Started with Syncfusion Vue UI Components and Vue CLI

This section explains how to use Syncfusion Vue components in Vue 2 application. To get started with Vue 3 application, refer to the [getting started with Vue 3](#) topic.

#### *Prerequisites*

#### [System requirements for Syncfusion Vue UI components](#)

#### *Create the Vue 2 application*

The best way to create a Vue 2 application is to use the [vue create](#) command.

```
`bash
```

```
npm install -g @vue/cli
```

```
vue create quickstart
```

```
cd quickstart
```

```
npm run serve
```

```
`
```

Initiating a new project prompts us to choose the type of project to be used for the current application. Select the option Default ([Vue 2] babel, eslint) from the menu.

```
E:\samples>vue create quickstart

Vue CLI v5.0.8
? Please pick a preset:
  Default ([Vue 3] babel, eslint)
> Default ([Vue 2] babel, eslint)
  Manually select features
```

#### *Add Syncfusion packages*

Once the Vue 2 application is created, install the required Syncfusion Vue component package in the application. All the available Syncfusion Vue packages are published in the [npmjs.com](https://www.npmjs.com) registry. Choose the component to be installed. In this article, the Grid component is used as an example.

Check out the [installation and upgrade](#) section to learn about the different ways of installing the packages. Here, the Grid component package is installed using the following `npm` command.

```
`bash
```

```
npm install @syncfusion/ej2-vue-grids --save
```

#### *Import the Syncfusion CSS styles*

After installing the Syncfusion component packages in the application, add the required theme based on the components used.

Check out the [themes](#) section to know more about built-in themes and different ways (npm packages, CDN and CRG) to refer the themes in the Vue application.

Here the themes are referred through the installed npm packages which contains the built-in themes of Syncfusion Vue component. Let's import the Material theme for the Grid component and its dependencies to the `<style>` section of the `App.vue` file as follows.

#### ~/SRC/APP.VUE

```
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-calendars/styles/material.css";
@import "../node_modules/@syncfusion/ej2-dropdowns/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
@import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
@import "../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-grids/styles/material.css";
</style>
```

Grid components use other Syncfusion components as well, so CSS references for the dependent component must be added in order to use all grid functionalities. Use this same order to display the Syncfusion Grid component's predefined appearance.

### Register the Syncfusion Vue component

Vue has two ways to register the Vue components in the Vue 2 application. Use one of the following ways to register the Syncfusion Vue components:

- [Vue.use\(\)](#) - It registers the Vue component and all its child directives globally.
- [Vue.component\(\)](#) - It registers the Vue component only. It will not register the child directives automatically. The child directives should be registered separately.

#### Using Vue.use()

Import the component plugin from the Vue package and register it using `Vue.use()` with the component plugin as its argument.

Refer to the following code snippet.

#### ~/SRC/APP.VUE

```
import { GridPlugin } from '@syncfusion/ej2-vue-grids';
Vue.use(GridPlugin);
```

#### Using Vue.component()

Import the component and component plugin from the Vue package and register them using `Vue.component()` with the name of the component from the component plugin and the Vue component as its arguments.

Refer to the following the code snippet.

#### ~/SRC/APP.VUE

```
import { GridPlugin, GridComponent, ColumnsDirective, ColumnsPlugin,
ColumnDirective, ColumnPlugin } from '@syncfusion/ej2-vue-grids';
Vue.component(GridPlugin.name, GridComponent);
Vue.component(ColumnsPlugin.name, ColumnsDirective);
Vue.component(ColumnPlugin.name, ColumnDirective);
```

### Add Syncfusion Vue component to the application

Add the Vue Grid to the `<template>` section of the `App.vue` file in the `src` directory. To display the Grid with records, add the Grid component and bind the [dataSource](#) to it. Here, the simple data is mapped to the `dataSource` property.

#### ~/SRC/APP.VUE

```
<template>
<div id="app">
<ejs-grid :dataSource="data">
<e-columns>
<e-column field="OrderID" headerText="Order ID" textAlign="Right"
:isPrimaryKey="true" width="100"></e-column>
<e-column field="CustomerID" headerText="Customer ID" width="80"></e-
column>
<e-column field="ShipCountry" headerText="Ship Country" width="90"></e-
column>
</e-columns>
</ejs-grid>
</div>
```

```

</template>
<script>
import Vue from 'vue';
import { GridPlugin } from '@syncfusion/ej2-vue-grids';
Vue.use(GridPlugin);
export default {
  name: 'app',
  data () {
    return {
      data: [
        {
          OrderID: 10248,
          CustomerID: "VINET",
          ShipCountry: "France",
        },
        {
          OrderID: 10249,
          CustomerID: "TOMSP",
          ShipCountry: "Germany",
        },
      ],
    }
  }
}
</script>

```

### Run the application

Run the application using the following command.

```
`bash
```

```
npm run serve
```

```
,
```

The output will appear as follows:

### ~/SRC/APP.VUE

```

<template>
  <div id="app">
    <ejs-grid :dataSource="data">
      <e-columns>
        <e-column field="OrderID" headerText="Order ID" textAlign="Right"
:isPrimaryKey="true" width="100"></e-column>
        <e-column field="CustomerID" headerText="Customer ID" width="80"></e-
column>
        <e-column field="ShipCountry" headerText="Ship Country"
width="90"></e-column>
      </e-columns>
    </ejs-grid>
  </div>
</template>
<script>
import Vue from 'vue';
import { GridPlugin } from '@syncfusion/ej2-vue-grids';
Vue.use(GridPlugin);

```

```

export default {
  data () {
    return {
      data: [
        {
          OrderID: 10248,
          CustomerID: "VINET",
          ShipCountry: "France",
        },
        {
          OrderID: 10249,
          CustomerID: "TOMSP",
          ShipCountry: "Germany",
        },
      ],
    }
  }
}
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-calendars/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-dropdowns/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-vue-grids/styles/material.css";
</style>

```

{% previewsample "page.domainurl/code-snippet/common/default-cs1" %}

*See also*

- [Getting started with Vue 3 application](#)
- [Getting started with Vue component using direct script](#)

Getting Started with Syncfusion Vue UI Components and Vue CLI

You can use [Vue CLI](#) to setup your Vue applications.

To install Vue CLI, use the following command.

```
`bash
```

```
npm install -g @vue/cli
```

```
npm install -g @vue/cli-init
```

```
`
```

Start a new project using the following Vue CLI command.

```
`bash
```

```
vue init webpack-simple quickstart
```

```
cd quickstart
```

```
npm install
```

```
,
```

### *Adding Syncfusion packages*

All the available Syncfusion Vue packages are published in the [npmjs.com](https://www.npmjs.com) registry.

Choose the component to be installed. In this application, the button component is installed.

To install the button component, use the following command.

```
`bash
```

```
npm install @syncfusion/ej2-vue-grids --save
```

```
,
```

### *Registering Vue component*

The two ways to register the Vue component are:

- `Vue.use()`
- `Vue.component()`

#### *Using `Vue.use()`*

Import the component plugin from the EJ2 Vue package and register it using `Vue.use()` with component plugin as its argument.

Refer to the following code snippet.

#### **~/SRC/APP.VUE**

```
import { GridPlugin, Page } from "@syncfusion/ej2-vue-grids";  
Vue.use(GridPlugin);
```

Note: By registering the component plugin in Vue, all child directives can also be globally registered.

#### *Using `Vue.component()`*

Import the component and component plugin from EJ2 Vue package and register it using the `Vue.component()` with name of component from component plugin and the EJ2 Vue component as its arguments.

Refer to the following the code snippet.

#### **~/SRC/APP.VUE**

```
import { GridComponent, GridPlugin } from "@syncfusion/ej2-vue-grids";  
Vue.use(GridPlugin.name, GridComponent);
```

Note: By using the `Vue.component()`, only the EJ2 Vue component can be registered. The child directives should be registered separately.

*Creating Vue sample*

Add the EJ2 Vue button in the `<template>` section of the `App.vue` file in `src` directory using `<ejs-button>`. The content attribute of the button component is provided as name in the data option of the `<script>` section.

**~/SRC/APP.VUE**

```
<template>
<div id="app">
  <ejs-grid :dataSource="data" :allowPaging="true"
    :pageSettings="pageSettings">
    <e-columns>
      <e-column field="OrderID" headerText="Order ID" textAlign="Right"
        width="90"></e-column>
      <e-column field="CustomerID" headerText="Customer ID" width="120"></e-
        column>
      <e-column field="Freight" headerText="Freight" textAlign="Right" format="C2"
        width="90"></e-column>
    </e-columns>
  </ejs-grid>
</div>
</template>
<script>
import Vue from "vue";
import { GridPlugin, Page, GridComponent } from "@syncfusion/ej2-vue-grids";
Vue.use(GridPlugin);
export default {
  data() {
    return {
      data: [
        { OrderID: 10248, CustomerID: "VINET", Freight: 32.38 },
        { OrderID: 10249, CustomerID: "TOMSP", Freight: 11.61 },
        { OrderID: 10250, CustomerID: "HANAR", Freight: 65.83 },
        { OrderID: 10251, CustomerID: "VICTE", Freight: 41.34 },
        { OrderID: 10252, CustomerID: "SUPRD", Freight: 51.3 },
        { OrderID: 10253, CustomerID: "HANAR", Freight: 58.17 },
        { OrderID: 10254, CustomerID: "CHOPS", Freight: 22.98 }
      ],
      pageSettings: { pageSize: 5 }
    };
  },
  provide: {
    grid: [Page]
  }
};
</script>
```

*Adding SCSS reference*

Add the styles of Grid component to the `<style>` section of the `App.vue` file as follows.

**~/SRC/APP.VUE**

```
<style lang="scss">
// syncfusion styles
@import "../node_modules/@syncfusion/ej2-base/styles/material.scss";
@import "../node_modules/@syncfusion/ej2-vue-grids/styles/material.scss";
```

```
</style>
```

### Adding `includePaths` option

While using scss files for style reference, you need to configure the `includePaths` in sass-loader options in the `webpack.config.js` like below:

#### ~/WEBPACK.CONFIG.JS

```
module: {
  rules: [
    ....
    ....
    {
      test: /\.vue$/,
      loader: 'vue-loader',
      options: {
        loaders: {
          // Since sass-loader (weirdly) has SCSS as its default parse mode, we map
          // the "scss" and "sass" values for the lang attribute to the right configs
          // here.
          'scss': [
            'vue-style-loader',
            'css-loader',
            {
              loader: "sass-loader",
              options: {
                includePaths: [
                  path.resolve(__dirname, "../node_modules/@syncfusion")
                ]
              }
            }
          ]
        }
      }
    }
    ....
    ....
  ]
}
```

### Running the application

Now, run the `npm run dev` command in the console to build your application and open it in the browser.

#### ~/SRC/APP.VUE

```
<template>
  <div id="app">
    <ejs-grid :dataSource="data" :allowPaging="true"
    :pageSettings='pageSettings'>
      <e-columns>
        <e-column field='OrderID' headerText='Order ID'
        textAlign='Right' width=90></e-column>
```

```

        <e-column field='CustomerID' headerText='Customer ID'
width=120></e-column>
        <e-column field='Freight' headerText='Freight' textAlign='Right'
format='C2' width=90></e-column>
        <e-column field='ShipCity' headerText='Ship City' width=150></e-
column>
    </e-columns>
</ejs-grid>
</div>
</template>
<script>
import Vue from "vue";
import { GridPlugin, Page } from "@syncfusion/ej2-vue-grids";
import { data } from "../datasource.js";
Vue.use(GridPlugin);
export default {
  data() {
    return {
      data: data,
      pageSettings: { pageSizes: true, pageSize: 9 }
    };
  },
  provide: {
    grid: [Page]
  }
}
</script>
<style lang="scss">
// syncfusion styles
@import "../node_modules/@syncfusion/ej2-base/styles/material.scss";
@import "../node_modules/@syncfusion/ej2-vue-grids/styles/material.scss";
</style>

```

{% previewsample "page.domainurl/code-snippet/common/sass-cs1" %}

#### How To override styles

In Syncfusion Vue components, you can override control styles by replacing sass variable values like below:

#### ~/SRC/APP.VUE

```

<style lang="scss">
// SASS Variable override
$accent: black;
$primary: blue;
// syncfusion styles
@import "../node_modules/@syncfusion/ej2-base/styles/material.scss";
@import "../node_modules/@syncfusion/ej2-vue-grids/styles/material.scss";
</style>

```

## Getting Started with Vue UI Components with the Nuxt Framework

This article provides a step-by-step guide for setting up a [Nuxt](#) project and integrating the Syncfusion Vue components using the [Composition API](#).

Nuxt.js is a powerful framework for building universal Vue.js applications. It is built on top of Vue.js and provides a higher-level structure and conventions to simplify the development of Vue applications.

### Prerequisites

#### [System requirements for Syncfusion Vue UI components](#)

#### Set up the Nuxt project

To initiate the creation of a new [Nuxt](#) project, use the following commands:

```
`bash
npx nuxi@latest init my-project
cd my-project
npm install
`
```

Now that **my-project** is ready to run with default settings, let's add Syncfusion components to the project.

#### Add Syncfusion Vue packages

Syncfusion Vue component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion Vue components in the project, install the corresponding npm package.

This article uses the [Vue Grid component](#) as an example. To use the Vue Grid component in the project, the **@syncfusion/ej2-vue-grids** package needs to be installed using the following command:

```
`bash
npm install @syncfusion/ej2-vue-grids --save
`
```

#### Import Syncfusion CSS styles

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, CRG and [Theme Studio](#). Refer to the [themes topic](#) to learn more about built-in themes and different ways to refer to themes in a Vue project.

In this article, the **Material** theme is applied using CSS styles, which are available in installed packages. The necessary **Material** CSS styles for the Grid component and its dependents were imported into the **<style>** section of the **app.vue** file.

#### ~/APP.VUE

```
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-calendars/styles/material.css";
@import "../node_modules/@syncfusion/ej2-dropdowns/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
@import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
@import "../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-grids/styles/material.css";
</style>
```

The order of importing CSS styles should be in line with their dependency graph.

### Add the Syncfusion Vue component

Follow the below steps to add the Vue Grid component:

1\ First, add the `setup` attribute to the `script` tag to indicate that Vue will be using the `Composition API`. And import the Grid component in the `script` section of the `app.vue` file.

#### ~/APP.VUE

```
<script setup>
import { GridComponent as EjsGrid, ColumnsDirective as EColumns,
ColumnDirective as EColumn } from '@syncfusion/ej2-vue-grids';
</script>
```

2\ In the `template` section, define the Grid component with the `dataSource` property and column definitions.

#### ~/APP.VUE

```
<template>
<ejs-grid :dataSource='data'>
<e-columns>
<e-column field='OrderID' width='100' textAlign="Right"></e-column>
<e-column field='CustomerID' width='100'></e-column>
<e-column field='EmployeeID' width='100' textAlign="Right"></e-column>
<e-column field='Freight' width='100' format="C2" textAlign="Right"></e-
column>
<e-column field='ShipCountry' width='100'></e-column>
</e-columns>
</ejs-grid>
</template>
```

3\ Declare the values for the `dataSource` property in the `script` section.

#### ~/APP.VUE

```
<script setup>
const data = [
{
OrderID: 10248, CustomerID: 'VINET', EmployeeID: 5, ShipCountry: 'France',
Freight: 32.38
},
{
OrderID: 10249, CustomerID: 'TOMSP', EmployeeID: 6, ShipCountry: 'Germany',
Freight: 11.61
},
{
OrderID: 10250, CustomerID: 'HANAR', EmployeeID: 4, ShipCountry: 'Brazil',
Freight: 65.83
}
];
</script>
```

Here is the summarized code for above steps in the `app.vue` file:

~/APP.VUE

```

<template>
<ejs-grid :dataSource='data'>
<e-columns>
<e-column field='OrderID' width='100' textAlign="Right"></e-column>
<e-column field='CustomerID' width='100'></e-column>
<e-column field='EmployeeID' width='100' textAlign="Right"></e-column>
<e-column field='Freight' width='100' format="C2" textAlign="Right"></e-
column>
<e-column field='ShipCountry' width='100'></e-column>
</e-columns>
</ejs-grid>
</template>
<script setup>
import { GridComponent as EjsGrid, ColumnsDirective as EColumns,
ColumnDirective as EColumn } from '@syncfusion/ej2-vue-grids';
const data = [
{
OrderID: 10248, CustomerID: 'VINET', EmployeeID: 5, ShipCountry: 'France',
Freight: 32.38
},
{
OrderID: 10249, CustomerID: 'TOMSP', EmployeeID: 6, ShipCountry: 'Germany',
Freight: 11.61
},
{
OrderID: 10250, CustomerID: 'HANAR', EmployeeID: 4, ShipCountry: 'Brazil',
Freight: 65.83
}
];
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-calendars/styles/material.css";
@import "../node_modules/@syncfusion/ej2-dropdowns/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
@import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
@import "../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-grids/styles/material.css";
</style>

```

## Run the project

To run the project, use the following command:

```
`bash
```

```
npm run dev
```

```
`
```

The output will appear as follows:

Order ID	Customer ID	Ship Country
10248	VINET	France
10249	TOMSP	Germany

## Getting Started with Vue UI Components with Vite and PNPM

This article provides a step-by-step guide for setting up a [Vite](#) project with a JavaScript environment and integrating the Syncfusion Vue components using [PNPM](#)

**PNPM** is an alternative package manager for Node.js that shares dependencies between packages and provides hard links to save disc space usage and installation times.

### Prerequisites

#### [System requirements for Syncfusion Vue UI components](#)

#### Set up the Vite project using PNPM

To initiate the creation of a new [Vite](#) project with [PNPM](#), use the below commands:

```
`bash
npm install -g pnpm
pnpm create vite@latest
`
```

Using the above command will lead you to set up additional configurations for the project as below:

1\ Define the project name: We can specify the name of the project directly. Let's specify the name of the project as **my-project** for this article.

```
`bash
? Project name: » my-project
`
```

2\ Select **Vue** as the framework. It will create a Vue 3 project.

```
`bash
? Select a framework: » - Use arrow-keys. Return to submit.
Vanilla
Vue
React
Preact
Lit
Svelte
Others
`
```

3\ Choose **JavaScript** as framework variant to build this Vite project using JavaScript and Vue.

```
`bash
```

? Select a variant: » - Use arrow-keys. Return to submit.

JavaScript

TypeScript

Customize with create-vue ↗

Nuxt ↗

`

4\ Upon completing the aforementioned steps to create **my-project**, run the following command to install its dependencies:

```
`bash
```

```
cd my-project
```

```
pnpm install
```

```
`
```

Now that **my-project** is ready to run with default settings, let's add Syncfusion components to the project.

#### Add Syncfusion Vue packages

Syncfusion Vue component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion Vue components in the project, install the corresponding npm package.

This article uses the [Vue Grid component](#) as an example. To use the Vue Grid component in the project, the **@syncfusion/ej2-vue-grids** package needs to be installed using the following command:

```
`bash
```

```
pnpm install @syncfusion/ej2-vue-grids --save
```

```
`
```

#### Import Syncfusion CSS styles

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, CRG and [Theme Studio](#). Refer to [themes topic](#) to learn more about built-in themes and different ways to refer to themes in a Vue project.

In this article, the **Material** theme is applied using CSS styles, which are available in installed packages. The necessary Material CSS styles for the Grid component and its dependents were imported into the **<style>** section of the **src/App.vue** file.

The dependency packages for Syncfusion in a PNPM vite project are situated within the **.pnpm/node\_modules** directory.

#### ~/SRC/APP.VUE

```
<style>
@import "../node_modules/.pnpm/node_modules/@syncfusion/ej2-
base/styles/material.css";
```

```
@import "../node_modules/.pnpm/node_modules/@syncfusion/ej2-
buttons/styles/material.css";
@import "../node_modules/.pnpm/node_modules/@syncfusion/ej2-
calendars/styles/material.css";
@import "../node_modules/.pnpm/node_modules/@syncfusion/ej2-
dropdowns/styles/material.css";
@import "../node_modules/.pnpm/node_modules/@syncfusion/ej2-
inputs/styles/material.css";
@import "../node_modules/.pnpm/node_modules/@syncfusion/ej2-
navigations/styles/material.css";
@import "../node_modules/.pnpm/node_modules/@syncfusion/ej2-
popups/styles/material.css";
@import "../node_modules/.pnpm/node_modules/@syncfusion/ej2-
splitbuttons/styles/material.css";
@import "../node_modules/.pnpm/node_modules/@syncfusion/ej2-
grids/styles/material.css";
</style>
```

The order of importing CSS styles should be in line with its dependency graph.

#### Add Syncfusion Vue component

Follow the below steps to add the Vue Grid component using the [Composition API](#):

1\, First, add the `setup` attribute to the `script` tag to indicate that Vue will be using the `Composition API`. And import the Grid component in the `script` section of the `src/App.vue` file.

#### ~/SRC/APP.VUE

```
<script setup>
import { GridComponent as EjsGrid, ColumnsDirective as EColumns,
ColumnDirective as EColumn } from '@syncfusion/ej2-vue-grids';
</script>
```

2\, In the `template` section, define the Grid component with the [dataSource](#) property and column definitions.

#### ~/SRC/APP.VUE

```
<template>
<ejs-grid :dataSource='data'>
<e-columns>
<e-column field='OrderID' width='100' textAlign="Right"></e-column>
<e-column field='CustomerID' width='100'></e-column>
<e-column field='EmployeeID' width='100' textAlign="Right"></e-column>
<e-column field='Freight' width='100' format="C2" textAlign="Right"></e-
column>
<e-column field='ShipCountry' width='100'></e-column>
</e-columns>
</ejs-grid>
</template>
```

3\, Declare the values for the `dataSource` property in the `script` section.

#### ~/SRC/APP.VUE

```
<script setup>
const data = [
  { OrderID: 10248, CustomerID: 'VINET', EmployeeID: 5, ShipCountry: 'France',
    Freight: 32.38 },
  { OrderID: 10249, CustomerID: 'TOMSP', EmployeeID: 6, ShipCountry:
    'Germany', Freight: 11.61 },
  { OrderID: 10250, CustomerID: 'HANAR', EmployeeID: 4, ShipCountry: 'Brazil',
    Freight: 65.83 }
];
</script>
```

Here is the summarized code for the above steps in the **src/App.vue** file:

### ~/SRC/APP.VUE

```
<template>
<ejs-grid :dataSource='data'>
<e-columns>
<e-column field='OrderID' width='100' textAlign="Right"></e-column>
<e-column field='CustomerID' width='100'></e-column>
<e-column field='EmployeeID' width='100' textAlign="Right"></e-column>
<e-column field='Freight' width='100' format="C2" textAlign="Right"></e-
column>
<e-column field='ShipCountry' width='100'></e-column>
</e-columns>
</ejs-grid>
</template>
<script setup>
// Import component and its directives
import { GridComponent as EjsGrid, ColumnsDirective as EColumns,
ColumnDirective as EColumn } from '@syncfusion/ej2-vue-grids';
const data = [
  { OrderID: 10248, CustomerID: 'VINET', EmployeeID: 5, ShipCountry: 'France',
    Freight: 32.38 },
  { OrderID: 10249, CustomerID: 'TOMSP', EmployeeID: 6, ShipCountry:
    'Germany', Freight: 11.61 },
  { OrderID: 10250, CustomerID: 'HANAR', EmployeeID: 4, ShipCountry: 'Brazil',
    Freight: 65.83 }
];
</script>
<style>
@import "../node_modules/.pnpm/node_modules/@syncfusion/ej2-
base/styles/material.css";
@import "../node_modules/.pnpm/node_modules/@syncfusion/ej2-
buttons/styles/material.css";
@import "../node_modules/.pnpm/node_modules/@syncfusion/ej2-
calendars/styles/material.css";
@import "../node_modules/.pnpm/node_modules/@syncfusion/ej2-
dropdowns/styles/material.css";
@import "../node_modules/.pnpm/node_modules/@syncfusion/ej2-
inputs/styles/material.css";
@import "../node_modules/.pnpm/node_modules/@syncfusion/ej2-
navigations/styles/material.css";
@import "../node_modules/.pnpm/node_modules/@syncfusion/ej2-
popups/styles/material.css";
```

```
@import "../node_modules/.pnpm/node_modules/@syncfusion/ej2-splitbuttons/styles/material.css";
@import "../node_modules/.pnpm/node_modules/@syncfusion/ej2-grids/styles/material.css";
</style>
```

### Run the project

To run the project, use the following command:

```
`bash
pnpm dev
`
```

The output will appear as follows:

![vue3-js-composition](../appearance/images/vue3-js-composition.png)

See also

### Getting started with testing Vue UI components in the Vitest project

This article provides a step-by-step guide for setting up a [Vitest](#) project, integrating Syncfusion Vue components, and perform comprehensive testing of the components.

**Vitest** is a blazing fast unit test framework powered by [Vite](#) that makes it easy to write and run tests for your Vue.js components. It is designed to be fast, easy to use, and compatible with Jest.

#### Prerequisites

[System requirements for Syncfusion Vue UI components](#)

#### Set up the Vitest project

To initiate the creation of a new **Vitest** project, use the following [create vue](#) command.

```
`bash
npm create vue@latest
`
```

Using the above commands will lead you to set up additional configurations for the project:

1\ Define the project name: We can specify the name of the project directly. Let's specify the name of the project as **my-project** for this article.

```
`bash
Vue.js - The Progressive JavaScript Framework
√ Project name: ... my-project
`
```

2\ To enable unit testing (Vitest) and configure the project, set the Vitest configuration to Yes.

```
`bash
```

```
√ Add TypeScript? ... No
```

```
√ Add JSX Support? ... No
```

```
√ Add Vue Router for Single Page Application development? ... No
```

```
√ Add Pinia for state management? ... No
```

```
√ Add Vitest for Unit Testing? ... Yes
```

```
√ Add an End-to-End Testing Solution? » No
```

```
√ Add ESLint for code quality? ... No
```

```
`
```

3\ Upon completing the aforementioned steps to create my-project, run the following command to install its dependencies:

```
`bash
```

```
cd my-project
```

```
npm install
```

```
`
```

4\ The default setup of Vitest utilizes JSDOM, which may not fully support all the APIs available in the window object. However, Syncfusion Vue components rely on certain APIs of the window object internally. Therefore, in order to ensure compatibility, it is necessary to configure Vitest with happy-dom. To install it, execute the following command:

```
`bash
```

```
npm i happy-dom --save-dev
```

```
`
```

5\ To add the happy-dom environment in the vitest.config.js file, replace the existing JSDOM value in the environment option with happy-dom. This will ensure that the happy-dom environment is used for your Vitest project.

#### ~/VITEST.CONFIG.JS

```
test: {  
  environment: 'happy-dom'  
}
```

Now that my-project is ready to run with default settings, let's add Syncfusion components to the project.

#### Add the Syncfusion packages

Syncfusion Vue component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion Vue components in the project, install the corresponding npm package.

This article uses the [Vue Grid component](#) as an example. To use the Vue Grid component in the project, the `@syncfusion/ej2-vue-grids` package needs to be installed using the following command:

```
`bash
```

```
npm install @syncfusion/ej2-vue-grids --save
```

```
,
```

### Add the Syncfusion Vue component

Follow the below steps to add the Vue Grid component:

1\ First, define the Grid component with the [dataSource](#) property and column definitions in the `src/components/HelloWorld.vue` file.

#### HELLOWORLD.VUE

```
<template>
<ejs-grid :dataSource="data">
<e-columns>
<e-column field='OrderID'></e-column>
<e-column field='CustomerID'></e-column>
<e-column field='EmployeeID'></e-column>
<e-column field='ShipCountry'></e-column>
<e-column field='Freight'></e-column>
</e-columns>
</ejs-grid>
</template>
<script>
import { GridComponent, ColumnsDirective, ColumnDirective } from
 '@syncfusion/ej2-vue-grids';
export default {
  components: {
    'ejs-grid': GridComponent,
    'e-columns': ColumnsDirective,
    'e-column': ColumnDirective
  },
  data() {
    return {
      data: [
        {
          OrderID: 10248, CustomerID: 'VINET', EmployeeID: 5, ShipCountry: 'France',
          Freight: 32.38
        },
        {
          OrderID: 10249, CustomerID: 'TOMSP', EmployeeID: 6, ShipCountry: 'Germany',
          Freight: 11.61
        },
        {
          OrderID: 10250, CustomerID: 'HANAR', EmployeeID: 4, ShipCountry: 'Brazil',
          Freight: 65.83
        }
      ]
    }
  }
};
</script>
```

2\ Next, add the unit testing cases for the component using the **Vitest** framework in the **src/components/tests/HelloWorld.spec.js** file.

### **HELLOWORLD.SPEC.JS**

```
import { describe, it, expect, vi } from 'vitest'
import { mount } from '@vue/test-utils'
import HelloWorld from '../HelloWorld.vue'
describe('EJSGrid', () => {
  it('Rows render correctly', async () => {
    window.crypto = vi.fn();
    window.crypto.getRandomValues = vi.fn();
    const wrapper = mount(HelloWorld);
    // Wait untill the component mount completely
    await new Promise((res) => setTimeout(res, 50))
    const rows = wrapper.findAll('.e-row');
    expect(rows.length).toBe(wrapper.vm.data.length);
    wrapper.unmount();
  });
  it('Columns render correctly', async () => {
    window.crypto = vi.fn();
    window.crypto.getRandomValues = vi.fn();
    const wrapper = mount(HelloWorld);
    // Wait untill the component mount completely
    await new Promise((res) => setTimeout(res, 50))
    const colHeader = wrapper.findAll('.e-headertext');
    for (let i = 0; i < Object.keys(wrapper.vm.data[0]).length; i++) {
      expect(colHeader[i].element.innerText).toBe(Object.keys(wrapper.vm.data[0])[i]);
    }
    wrapper.unmount();
  });
});
```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run test:unit
```

```
`
```

The output will appear as follows:

```
`bash
```

```
DEV v0.31.4 D:/Testing/vitest
```

```
✓ src/components/tests/HelloWorld.spec.js (2)
```

```
Test Files 1 passed (1)
```

```
Tests 2 passed (2)
```

```
Start at 13:06:12
```

```
Duration 3.05s (transform 126ms, setup 0ms, collect 1.80s, tests 221ms, environment 602ms, prepare 130ms)

## Getting Started with Syncfusion Vue UI Components using direct scripts in a quickstart application

Vue provides native script support, allowing users to directly include the Vue.js library in an HTML file without the need for a build process or module bundler. This feature is useful for simpler projects or prototypes, enabling quick and easy implementation of Vue.js without setting up a complex build workflow.

Similarly, Syncfusion offers direct script support for its Vue components. Developers can seamlessly include Syncfusion Vue components in their HTML files and leverage them within their Vue.js applications. This allows for straightforward integration of Syncfusion Vue components without the need for additional build processes. Now, let's delve into the process of utilizing Syncfusion Vue components through direct script inclusion.

### Prerequisites

- Any IDE, such as [Visual Studio Code](#)

### Set up the Vue project

To demonstrate the usage of the **Grid** component through direct scripting, follow these steps:

1\. Begin by creating a folder named **quickstart** for the project. 2\. Inside the **quickstart** folder, create an HTML file named **index.html**.

Include the appropriate version of the Vue.js library in the **index.html** file based on whether to use [Vue 2](#) or [Vue 3](#) in the project. Then, create a new Vue instance with the required configuration options.

The [Vue class component](#) package is required before the 2023 Volume 1 (v21.1.35) release. So, add the [Vue class component](#) script to the head section of the **index.html** file for Vue 3 direct script.

#### **VUE 2 (~/INDEX.HTML)**

```
<div id="app">
<!-- Vue components goes here -->
</div>
<script
src="https://cdn.jsdelivr.net/npm/vue@2.7.14/dist/vue.min.js"></script>
<script>
new Vue({
el: '#app',
});
</script>
```

#### **VUE 3 (~/INDEX.HTML)**

```
<div id="app">
<!-- Vue components goes here -->
</div>
```

```
<script src="https://unpkg.com/vue@3/dist/vue.global.js"></script>
<script>
Vue.createApp({
  el: '#app',
}).mount('#app');
</script>
```

### Import Syncfusion CSS styles

You can import themes for the Syncfusion Vue component in various ways, such as using CSS from CDN, [CRG] and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to themes in a Vue project.

In this article, **Material** theme is applied using CSS styles, which are available in CDN. Add the **Material** CSS styles to the head section of the **index.html** file.

#### ~/INDEX.HTML

```
<link rel="stylesheet"
href="https://cdn.syncfusion.com/ej2/21.2.3/material.css" rel="stylesheet"
type="text/css" />
```

### Import Syncfusion Vue scripts

To integrate Syncfusion components into your application, add the required Syncfusion Vue direct scripts to the head section of the **index.html** file to set up the Vue instance.

#### ~/INDEX.HTML

```
<script src="https://cdn.syncfusion.com/ej2/21.2.3/ej2-vue-es5/dist/ej2-
vue.min.js"></script>
```

### Add Syncfusion Vue component

1\ First, register the Grid component and its child directives in Vue.

#### VUE 2 (~/INDEX.HTML)

```
<script>
Vue.use(ejs.grids.GridPlugin);
</script>
```

#### VUE 3 (~/INDEX.HTML)

```
<script>
Vue.createApp({
  el: '#app',
  components: {
    'ejs-grid' : ej.grids.GridComponent,
    'e-columns' : ej.grids.ColumnsDirective,
    'e-column' : ej.grids.ColumnDirective
  }
}).mount('#app');
</script>
```

Getting started    Getting Started with Syncfusion Vue UI Components using direct scripts in a quickstart application

2\.. Add the component to the `section` of the **index.html** file. Bind the [data-source](#) property and inject the **Page** module. Follow the [Getting Started](#) documentation for further details.

While using Syncfusion Vue components in a direct script way, camel-cased property (`isPrimaryKey`) names need to be specified in the kebab-cased (`is-primary-key`) equivalents.

## VUE 2 (~/INDEX.HTML)

  </script>
</body>
</html>

```

### Run the project

Run the **index.html** file in the web browser. The output will appear as follows:

```
{% previewsample "page.domainurl/code-snippet/common/getting-started-es5-vue3-cs1" %}
```

## Installation and Upgrade

<!-- markdownlint-disable MD024 -->

### Installation

#### Install by using npm CLI

Syncfusion Vue (Essential JS 2) packages are published in [npm](#). You can install the necessary packages from npm's install command. For example, vue grid package can be installed using following command.

,

```
npm install @syncfusion/ej2-vue-grids --save
```

,

### Install by using package.json

1. Add the Syncfusion Vue (Essential JS 2) package references in the `dependencies` of `~/package.json` file.

```
,  
{  
"dependencies": {  
"@syncfusion/ej2-vue-grids": "*",  
"@syncfusion/ej2-vue-charts": "*"  
}  
}  
,
```

The `*` indicates the latest version of npm package. Refer the [documentation](#) for more details about npm versioning.

2. Now, open the command prompt and run the `npm install` command line. This will install all npm dependencies in a single command line.

Refer the [documentation](#) for more details about npm package.json

### Download JavaScript – EJ2 Installer

The Syncfusion JavaScript - EJ2 installer can be downloaded from the Syncfusion website. You can either download the licensed installer or try our trial installer depending on your license.

- Trial Installer
- Licensed Installer

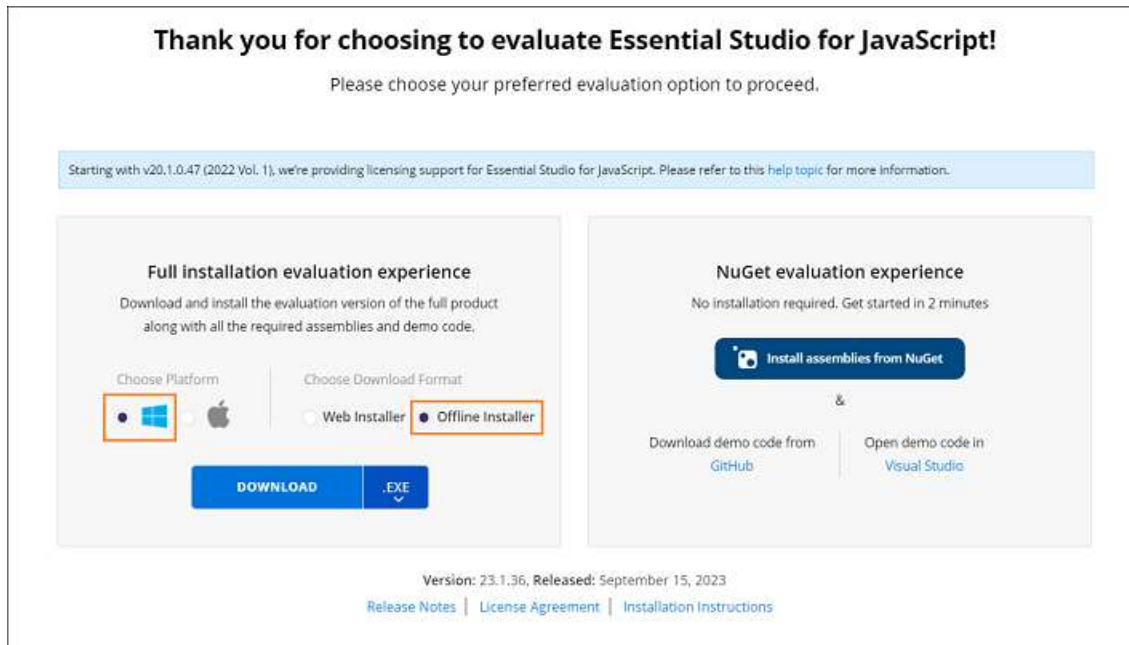

### Download the trial version

Our 30-day trial can be downloaded in two ways.

- Download free trial setup
- Start trials if using components [through npm](#)

### Download free trial setup

1. You can evaluate our 30-day free trial by visiting the [Download Free Trial](#) page and select the JavaScript platform.
2. After completing the required form or logging in with your registered Syncfusion account, you can download the JavaScript - EJ2 trial installer from the confirmation page. (See the screenshot below.)

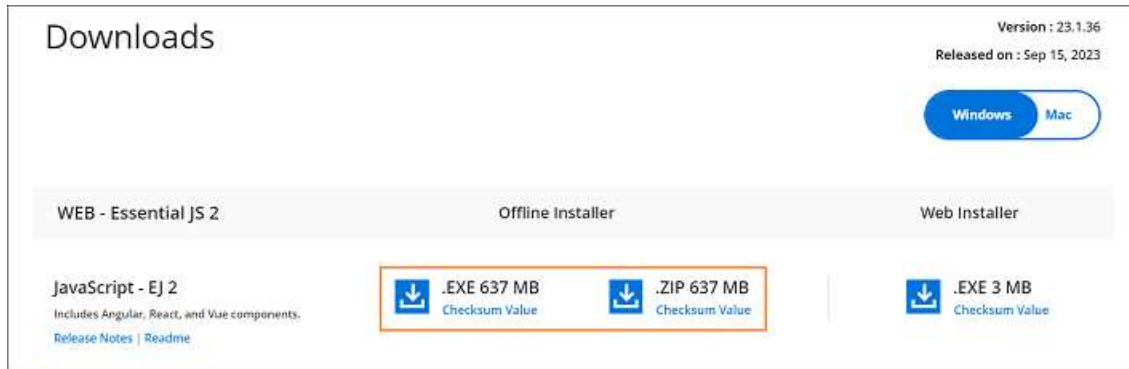

3. With a trial license, only the latest version's trial installer can be downloaded.
4. After downloading, the Syncfusion JavaScript - EJ2 trial installer can be unlocked using either the trial unlock key or the Syncfusion registered login credential. More information on generating an unlock key can be found in this article.
5. Before the trial expires, you can download the trial installer at any time from your registered account's Trials & Downloads page (See the screenshot below.)
6. Click the Download (element 1 in the screenshot below) button to get the Syncfusion Essential Studio JavaScript – EJ2 web installer.

## Trial Downloads and Unlock Keys

7. Click the More Download Options (element 2 in the above screenshot) button to get the Essential Studio JavaScript – EJ2 Offline trial installer which is available in EXE and ZIP format.

### Start trials if using components through [npm](#)

You should initiate an evaluation if you have already obtained our components through [npm](#)

1. You can start your 30-day free trial for JavaScript – EJ2 from the [Start Trial](#) page from your account.

WEB

Blazor  
Includes 80+ Blazor components for ASP.NET Core application development.  
[TRIAL IN PROGRESS](#)

JavaScript  
Includes 80+ JavaScript controls for developing modern web applications. It also includes complete support for Angular, React, and Vue frameworks.  
[START TRIAL](#)

2. To access this page, you must sign up/log in with your Syncfusion account.
3. Begin your trial by selecting the JavaScript – EJ2 product.

Note: If you've already used the trial products and they haven't expired, you won't be able to start the trial for the same product again.

4. After you've started the trial, go to the [Trials & Downloads](#) page to get the latest version trial installer. You can generate the [unlock](#) key here at any time before the trial period expires. (See the screenshot below.)

### Trial Downloads and Unlock Keys

Starting with v20.1.0.47 (2022 Vol. 1), we're providing licensing support for Essential Studio for JavaScript(Essential JS 2). Please refer to this [help topic](#) for more information.

JavaScript (Essential JS 2) - [Redacted]

Trial Version : [Redacted]

[Release Notes](#) | [Get License Key](#) ⓘ | [Get Unlock Key](#) ⓘ | [Security Management Report](#)

[Download](#) 1

[More Download Options](#) 2

5. You can find your current active trial products on the [Trials & Downloads](#) page.

#### *Download the license version*

1. Syncfusion licensed products will be available in the [License & Downloads](#) page under your registered Syncfusion account.
2. You can view all the licenses (both active and expired) associated with your account.
3. Click the Download (element 1 in the screenshot below) button to download the respective product's installer.
4. The most recent version of the installer will be downloaded from this page.
5. To download older version installers, go to [Downloads Older Versions](#) (element 2 in the screenshot below).
6. You can download other platform/add-on installers by going to More Downloads Options (element 3 in the screenshot below).
7. For Windows OS, EXE and Zip formats are available for download. They are both Offline Installers.

You can also refer to the [Online installer](#) and [Offline installer](#) links for step-by-step installation guidelines.

### Installation using Web Installer

You can refer to the [Download](#) section to learn how to get the JavaScript – EJ2 trial or licensed installer.

#### Overview

For the Essential Studio JavaScript – EJ2 product, Syncfusion offers a Web Installer. This installer alleviates the burden of downloading a larger installer. You can simply download and run the online installer, which will be smaller in size and will download and install the Essential Studio products you have chosen. You can get the most recent version of Essential Studio Web Installer [here](#).

The frameworks listed below are supported in this installer.

- JavaScript
- Angular
- React
- Vue
- JavaScript (ES5)

### Installation

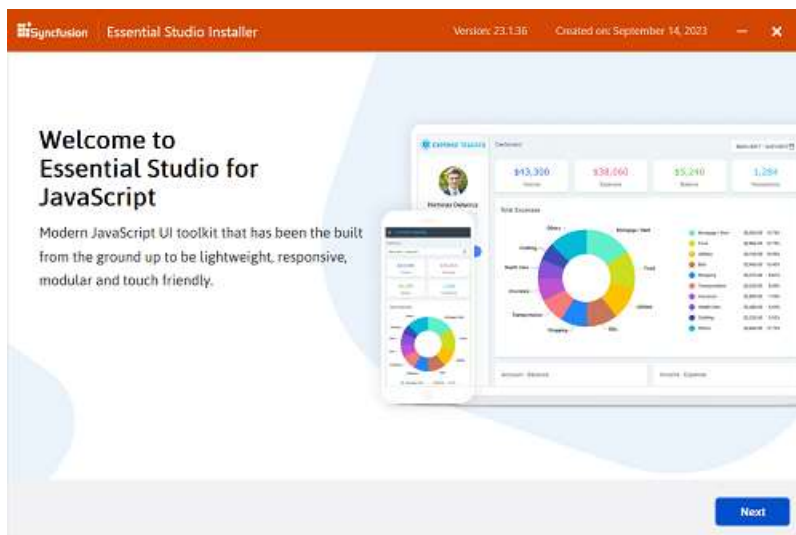

The steps below show how to install Essential Studio JavaScript – EJ2 Web Installer.

1. Open the Syncfusion Essential Studio JavaScript – EJ2 Web Installer file from downloaded location by double-clicking it. The Installer Wizard automatically opens and extracts the package.

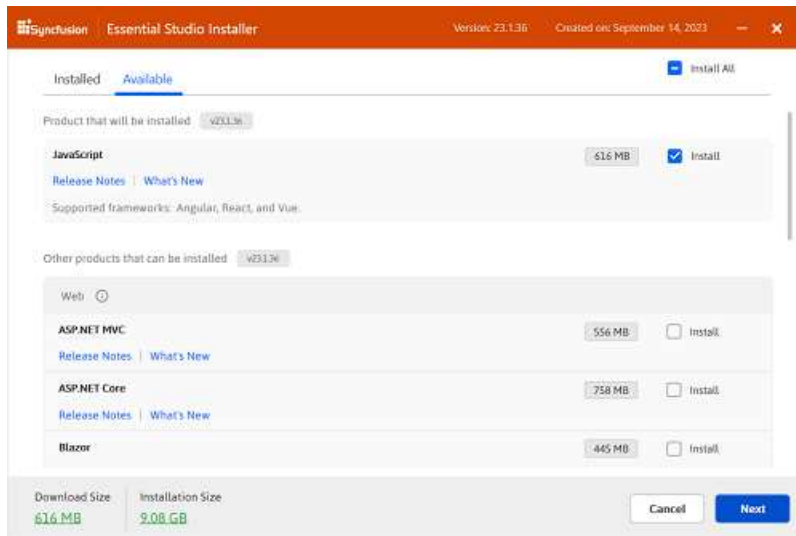

Note: The installer wizard extracts the syncfusionejs2webinstaller\_{version}.exe dialog, which displays the package's unzip operation.

2. The Syncfusion JavaScript - EJ2 Web Installer's welcome wizard will be displayed. Click the Next button.

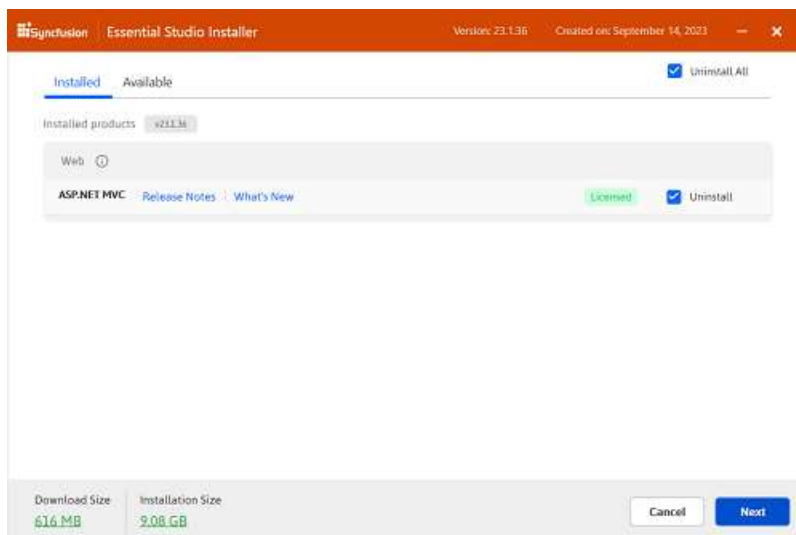

3. The Platform Selection Wizard will appear. From the **Available** tab, select the products to be installed. Select the Install All checkbox to **install all** products.

## Available

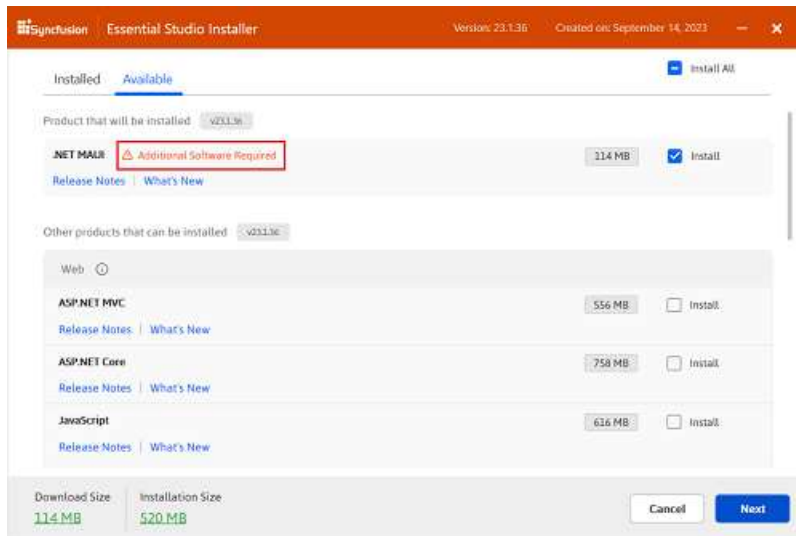

If you have multiple products installed in the same version, they will be listed under the **Installed** tab. You can also select which products to uninstall from the same version. Click the Next button.

### Installed

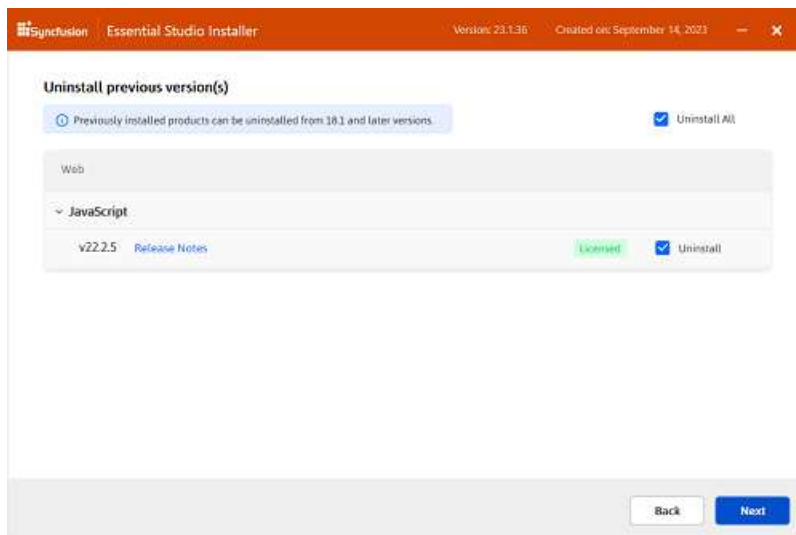

Important: If the required software for the selected product isn't already installed, the **Additional Software Required** alert will appear. You can, however, continue the installation and install the necessary software later.

### Required software

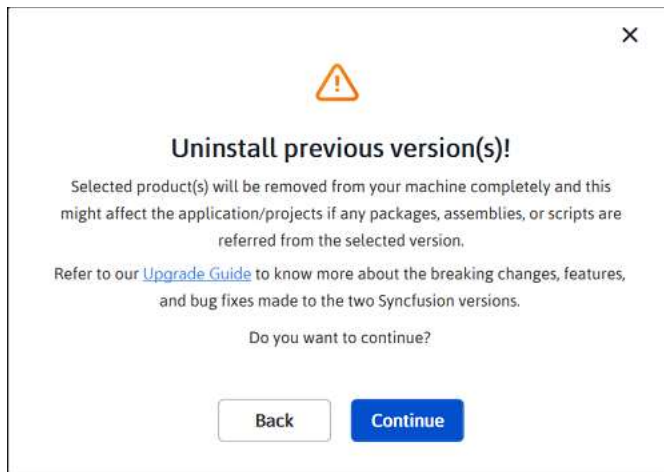

4. If previous version(s) for the selected products are installed, the Uninstall previous version wizard will be displayed. You can see the list of previously installed versions for the products you've chosen here. To remove all versions, check the **Uninstall All** checkbox. Click the Next button.

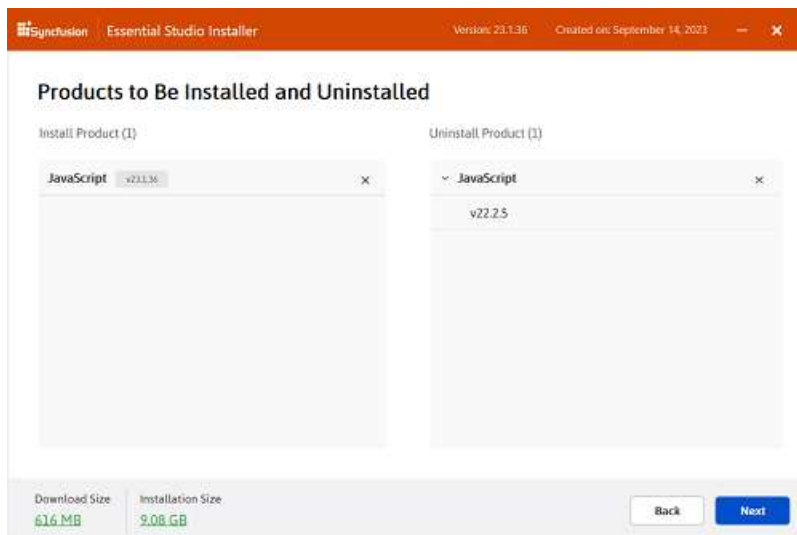

Note: From the 2021 Volume 1 release, Syncfusion has provided option to uninstall the previous versions from 18.1 while installing the new version.

5. Pop up screen will be displayed to get the confirmation to uninstall selected previous versions.

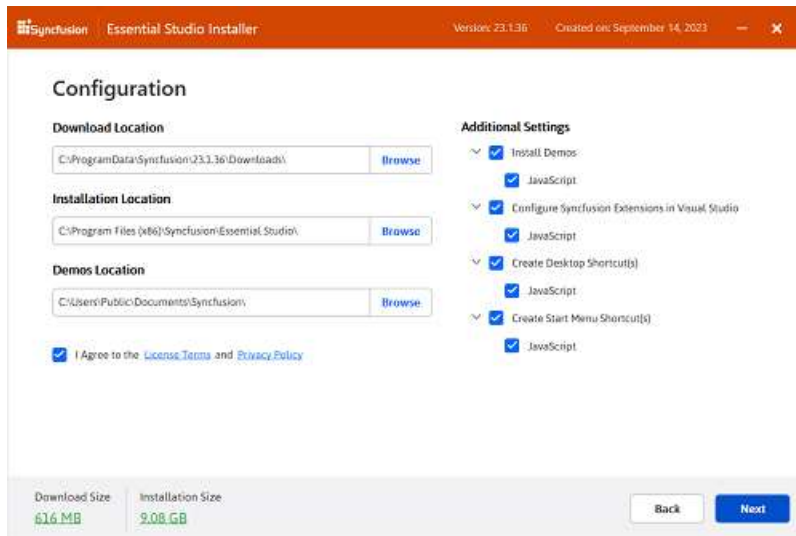

6. The Confirmation Wizard will appear with the list of products to be installed/uninstalled. You can view and modify the list of products that will be installed and uninstalled from this page.

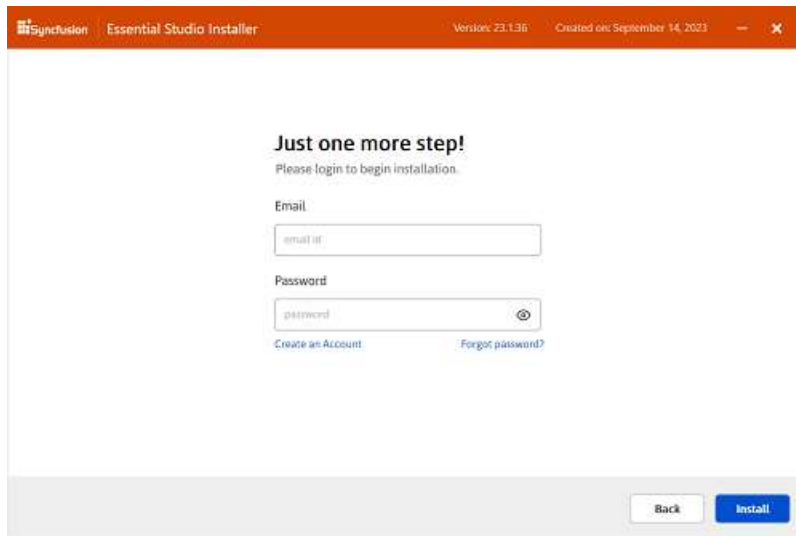

Note: By clicking the **Download Size** and **Installation Size** links, you can determine the approximate size of the download and installation

7. The Configuration Wizard will appear. You can change the Download, Install, and Demos locations from here. You can also change the Additional settings on a product-by-product basis. Click Next to install with the default settings.

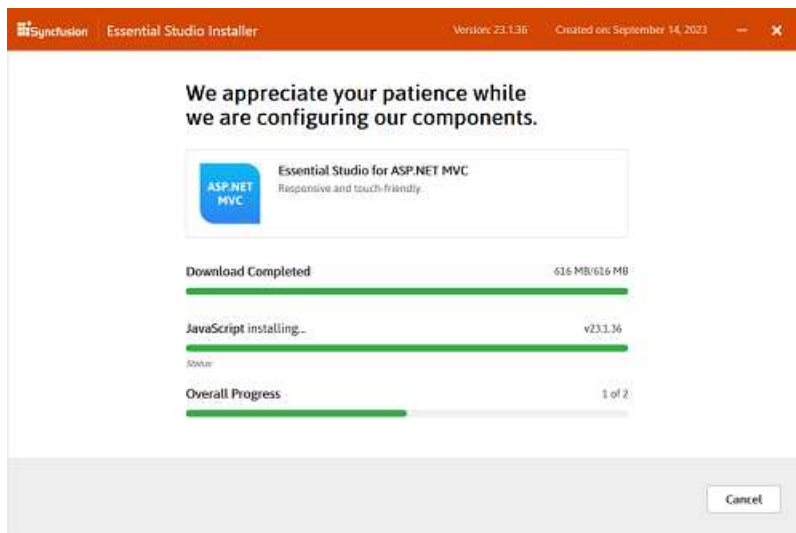

### Additional settings

- Select the **Install Demos** check box to install Syncfusion samples, or leave the check box unchecked, if you do not want to install Syncfusion samples
- Select the **Configure Syncfusion Extensions controls in Visual Studio** checkbox to configure the Syncfusion Extensions in Visual Studio or clear this check box when you do not want to configure the Syncfusion Extensions in Visual Studio.
- Check the **Create Desktop Shortcut** checkbox to add a desktop shortcut for Syncfusion Control Panel
- Check the **Create Start Menu Shortcut** checkbox to add a shortcut to the start menu for Syncfusion Control Panel
  8. After reading the License Terms and Conditions, check the **I agree to the License Terms and Privacy Policy** check box. Click the Next button.
  9. The login wizard will appear. You must enter your Syncfusion email address and password. If you do not already have a Syncfusion account, you can create one by clicking on **Create an Account**. If you have forgotten your password, click **Forgot Password** to create a new one. Click the Install button.

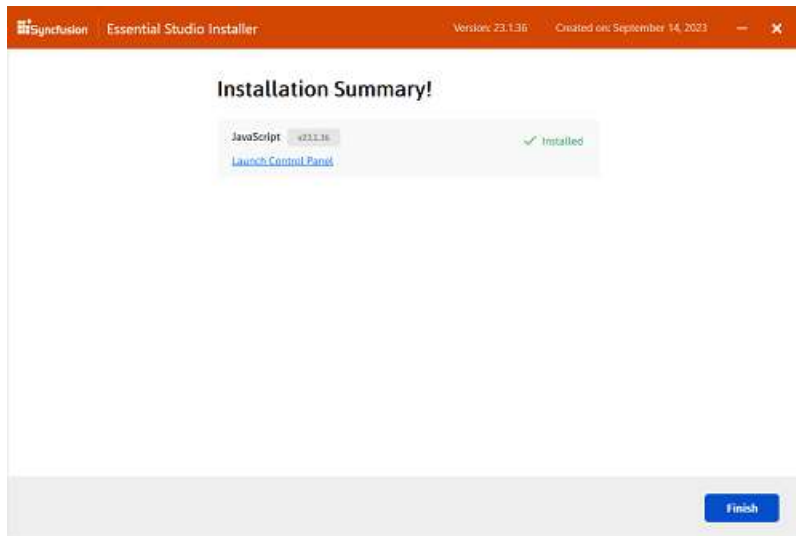

Important: The products you have chosen will be installed based on your Syncfusion License (Trial or Licensed).

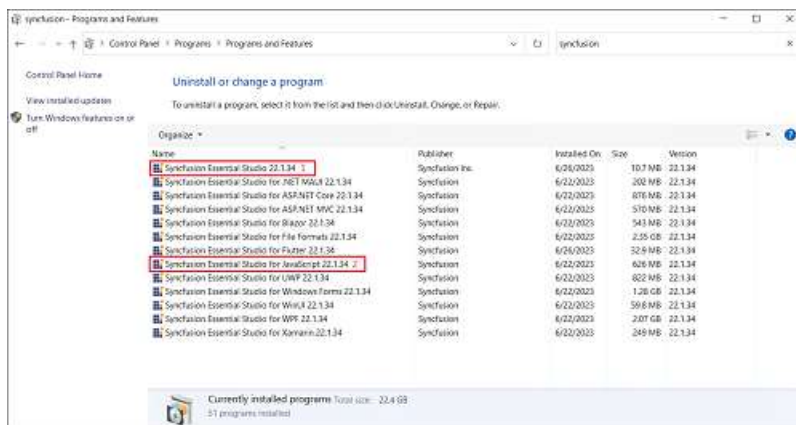

10. The download and installation/uninstallation progress will be displayed as shown below.

11. When the installation is finished, the **Summary** wizard will appear. Here you can see the list of products that have been installed successfully and those that have failed. To close the Summary wizard, click Finish.

- To open the Syncfusion Control Panel, click **Launch Control Panel**.
12. After installation, there will be two Syncfusion control panel entries, as shown below. The Essential Studio entry will manage all Syncfusion products installed in the same version, while the Product entry will only uninstall the specific product setup.

## Uninstallation

Syncfusion JavaScript – EJ2 installer can be uninstalled in two ways.

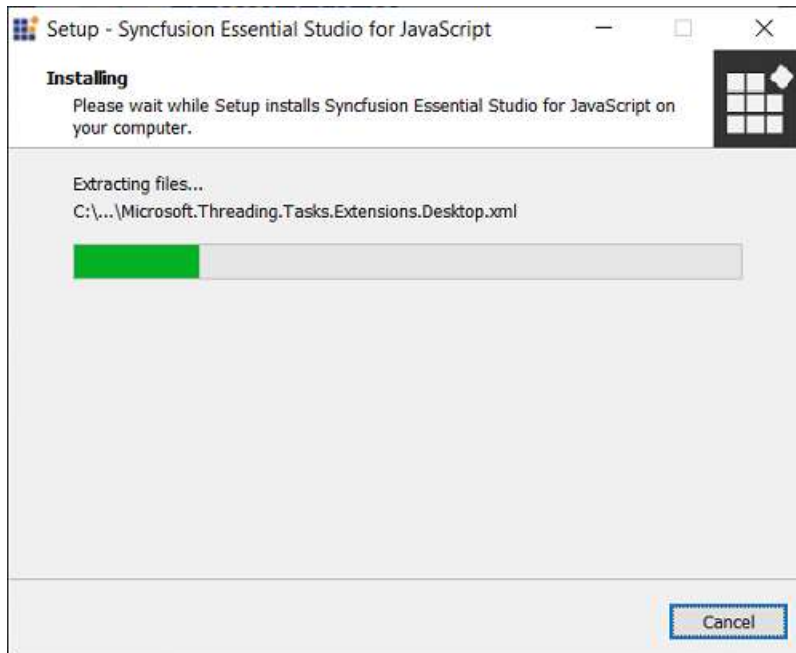

- Uninstall the JavaScript – EJ2 using the Syncfusion JavaScript – EJ2 web installer
- Uninstall the JavaScript – EJ2 from Windows Control Panel

Follow either one of the option below to uninstall Syncfusion Essential Studio JavaScript – EJ2 installer

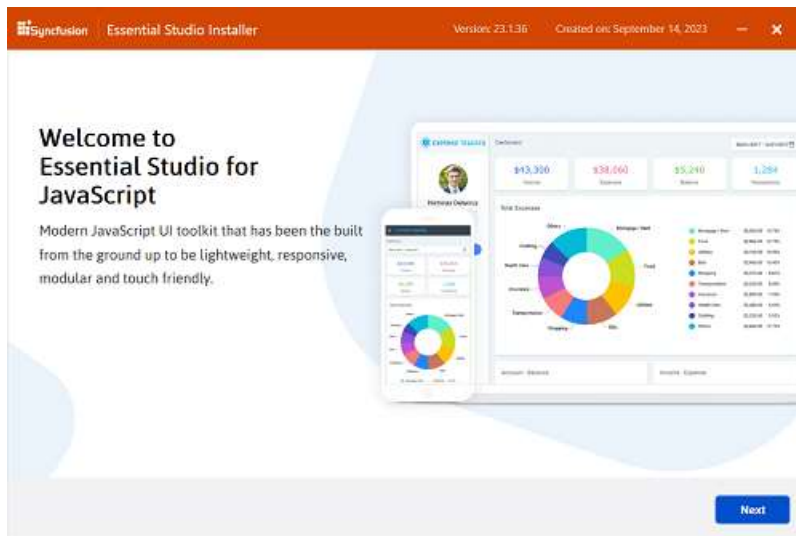

### *Option 1: Uninstall the JavaScript–EJ2 using the Syncfusion JavaScript–EJ2 web installer*

Syncfusion provides the option to uninstall products of the same version directly from the Web Installer application. Select the products to be uninstalled from the list, and Web Installer will uninstall them one by one.

Open the Syncfusion Essential Studio JavaScript – EJ2 Online Installer file from downloaded location by double-clicking it. The Installer Wizard automatically opens and extracts the package

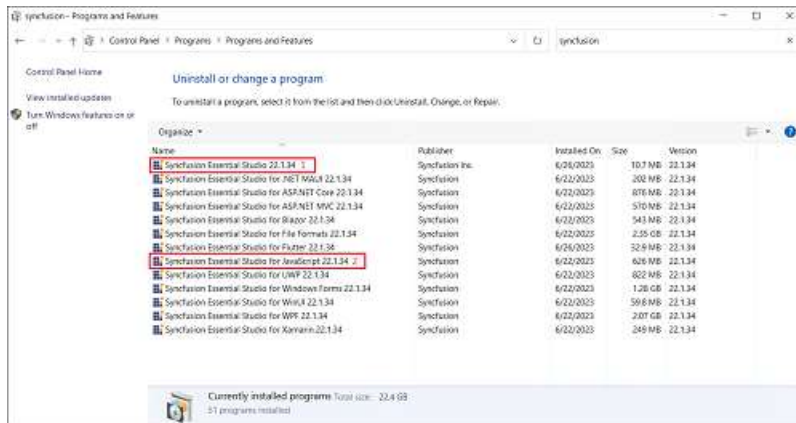

The Syncfusion JavaScript – EJ2 Web Installer’s welcome wizard will be displayed. Click the Next button

#### *Option 2: Uninstall the JavaScript–EJ2 from windows control panel*

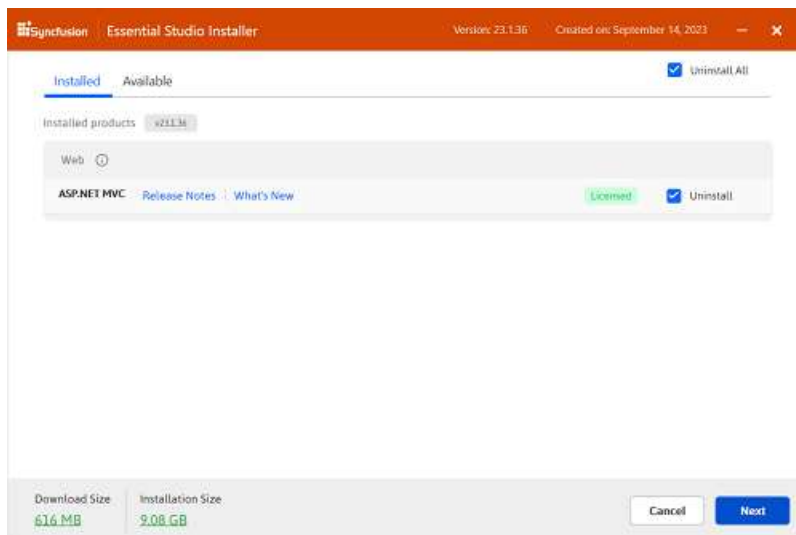

You can uninstall all the installed products by selecting the **Syncfusion Essential Studio {version}** entry (element 1 in the below screenshot) from the Windows control panel, or you can uninstall JavaScript – EJ2 alone by selecting the **Syncfusion Essential Studio for JavaScript – EJ2 {version}** entry (element 2 in the below screenshot) from the Windows control panel.

Note: If the **Syncfusion Essential Studio** for JavaScript {version} entry is selected from the Windows control panel, the Syncfusion Essential Studio JavaScript – EJ2 alone will be removed and the below default MSI uninstallation window will be displayed.

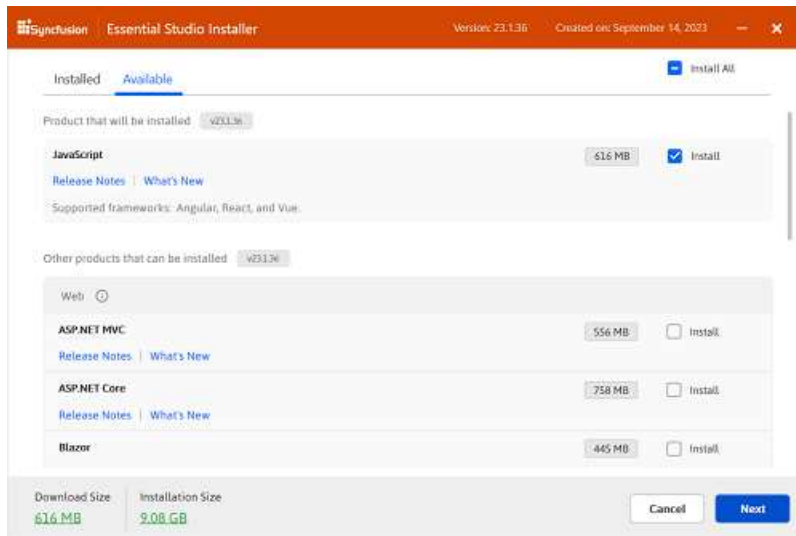

1. The Platform Selection Wizard will appear. From the **Installed** tab, select the products to be uninstalled. To select all products, check the **Uninstall All** checkbox. Click the Next button.

## Installed

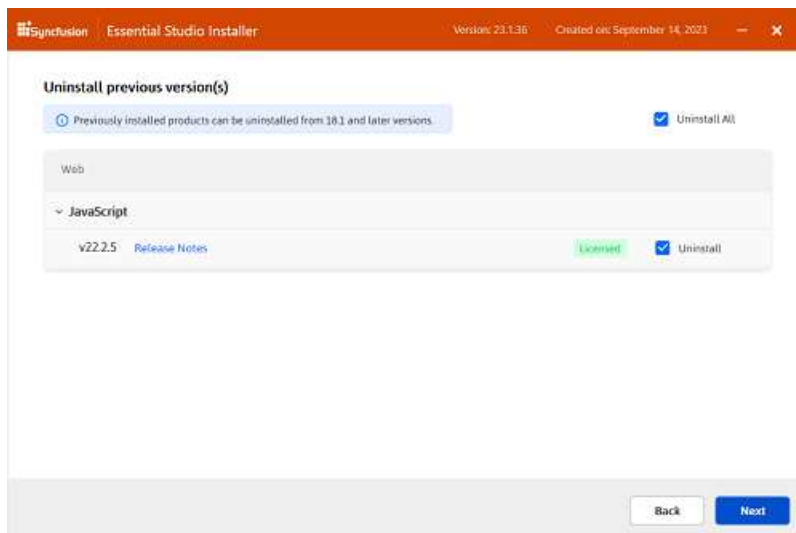

You can also select the products to be installed from the **Available** tab. Click the Next button.

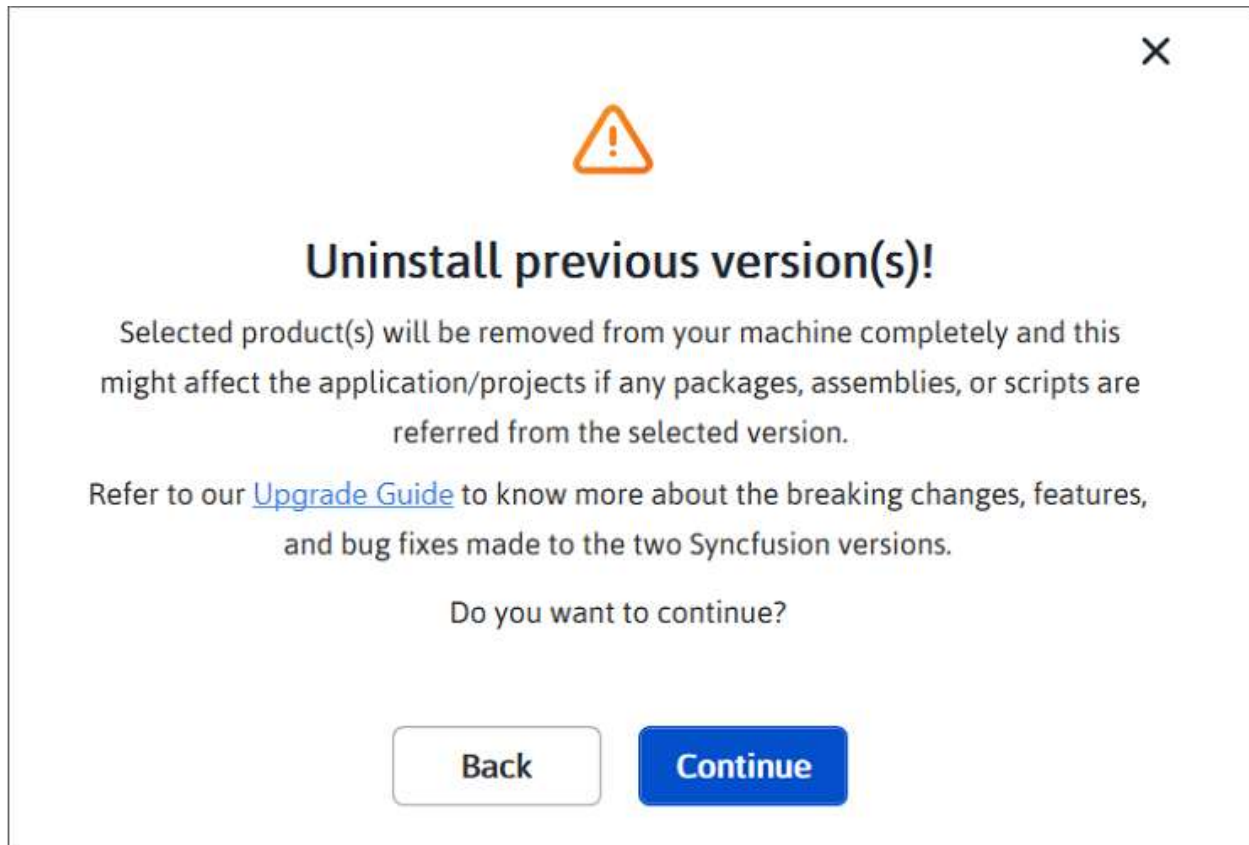

## Available

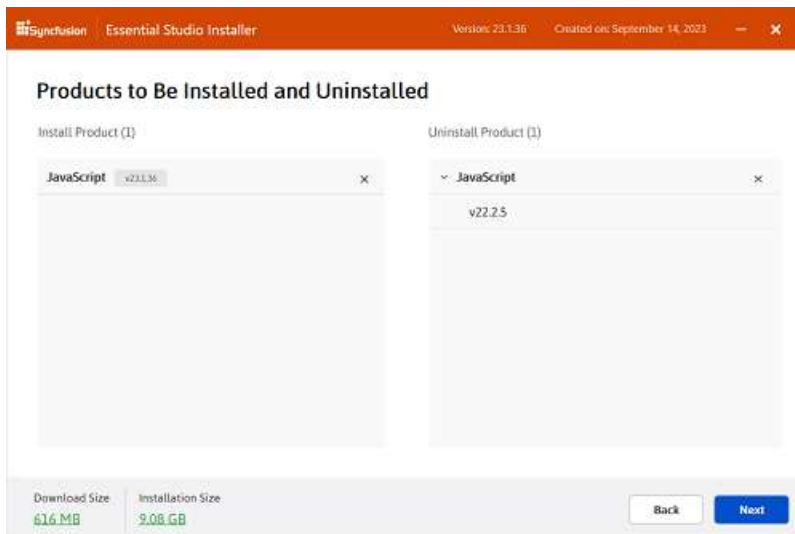

2. If any other products selected for installation, Uninstall previous version wizard will be displayed with previous version(s) installed for the selected products. Here you can view the list of installed previous versions for the selected products. Select **Uninstall All** checkbox to select all the versions. Click Next.

3. Pop up screen will be displayed to get the confirmation to uninstall selected previous versions.

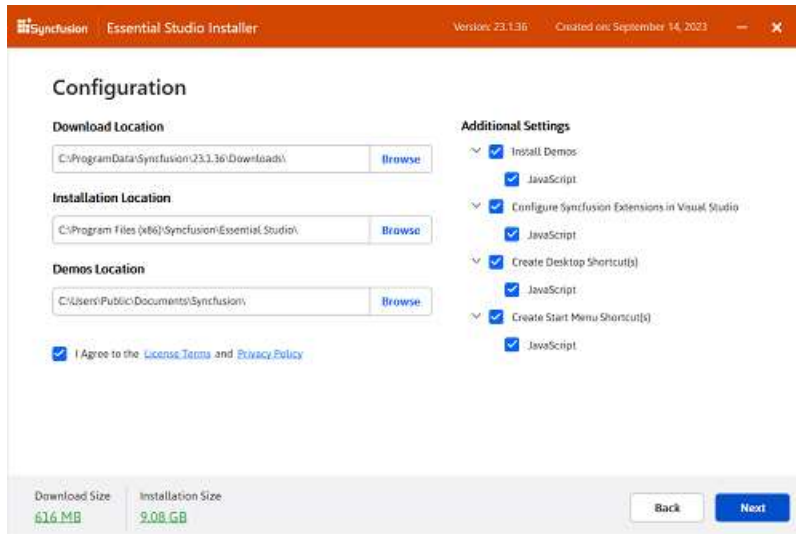

4. The Confirmation Wizard will appear with the list of products to be installed/uninstalled. Here you can view and modify the list of products that will be installed/uninstalled.

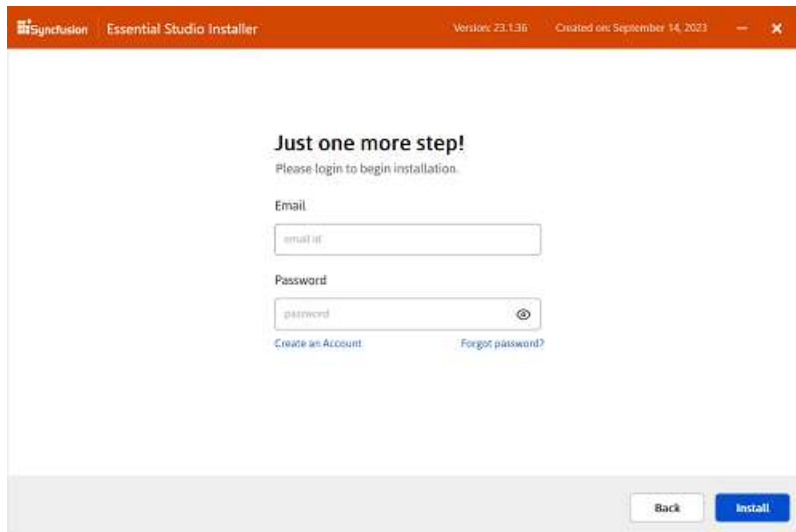

Note: By clicking the **Download Size** and **Installation Size** links, you can determine the approximate size of the download and installation

- The Configuration Wizard will appear. You can change the Download, Install, and Demos locations from here. You can also change the Additional settings on a product-by-product basis. Click Next to install with the default settings.

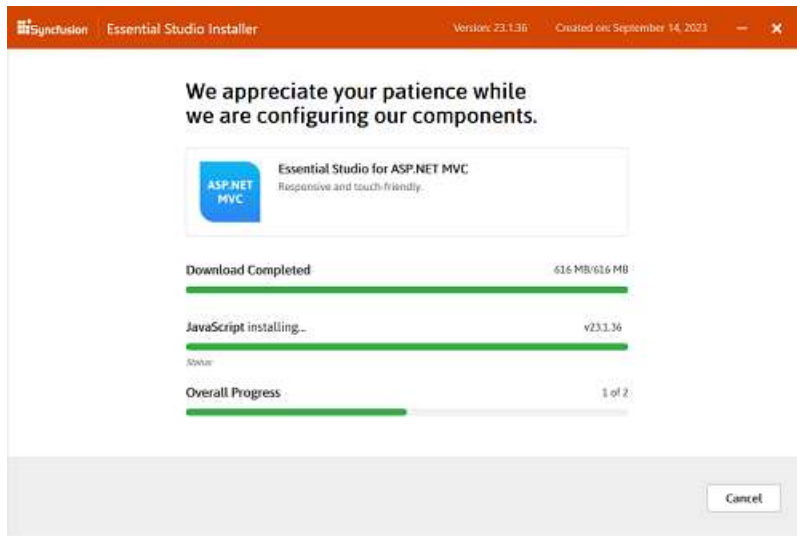

- After reading the License Terms and Conditions, check the **I agree to the License Terms and Privacy Policy** check box. Click the Next button.
- The login wizard will appear. You must enter your Syncfusion email address and password. If you do not already have a Syncfusion account, you can create one by clicking on **Create an Account**. If you have forgotten your password, click **Forgot Password** to create a new one. Click the Install button.

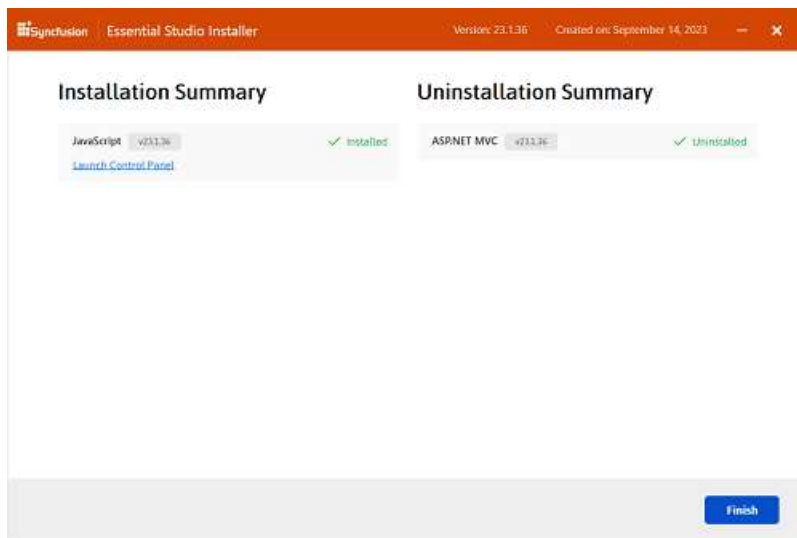

Important: The products you have chosen will be installed based on your Syncfusion License (Trial or Licensed).

- The download, installation, and uninstallation progresses will be shown.

9. When the installation is finished, the **Summary** wizard will appear. Here you can see the list of products that have been successfully and unsuccessfully installed/uninstalled. To close the Summary wizard, click Finish.

- To open the Syncfusion Control Panel, click **Launch Control Panel**

### Installation using Offline Installer

You can refer to the [Download](#) section to learn how to get the JavaScript – EJ2 trial or licensed installer.

The frameworks listed below are supported in this installer.

- JavaScript
- Angular
- React
- Vue
- JavaScript (ES5)

## Installing with UI

The steps below show how to install the Essential Studio JavaScript – EJ2 installer.

1. Open the Syncfusion JavaScript – EJ2 offline installer file from downloaded location by double-clicking it. The Installer Wizard automatically opens and extracts the package

Note: The Installer wizard extracts the syncfusionjs2 (version).exe dialog, which displays the package's unzip operation.

2. To unlock the Syncfusion offline installer, you have two options:
  - Login To Install
  - Use Unlock Key

### Login To Install

You must enter your Syncfusion email address and password. If you don't already have a Syncfusion account, you can sign up for one by clicking **"Create an account"**. If you have forgotten your password, click on **"Forgot Password"** to create a new one. Once you've entered your Syncfusion email and password, click Next.

**Syncfusion**

## Essential Studio for JavaScript

Version: 23.1.36, Date: September 14, 2023

Supported frameworks: Angular, React, and Vue.

Thank you for choosing Syncfusion Essential Studio. Please enter the required information to proceed further.

**Login To Install**    [Use Unlock Key](#)

Email \*

Password \*

[Forgot Password?](#)

Don't have an account? [Create an account](#)

☐ I agree to the [License Terms](#) and [Privacy Policy](#)

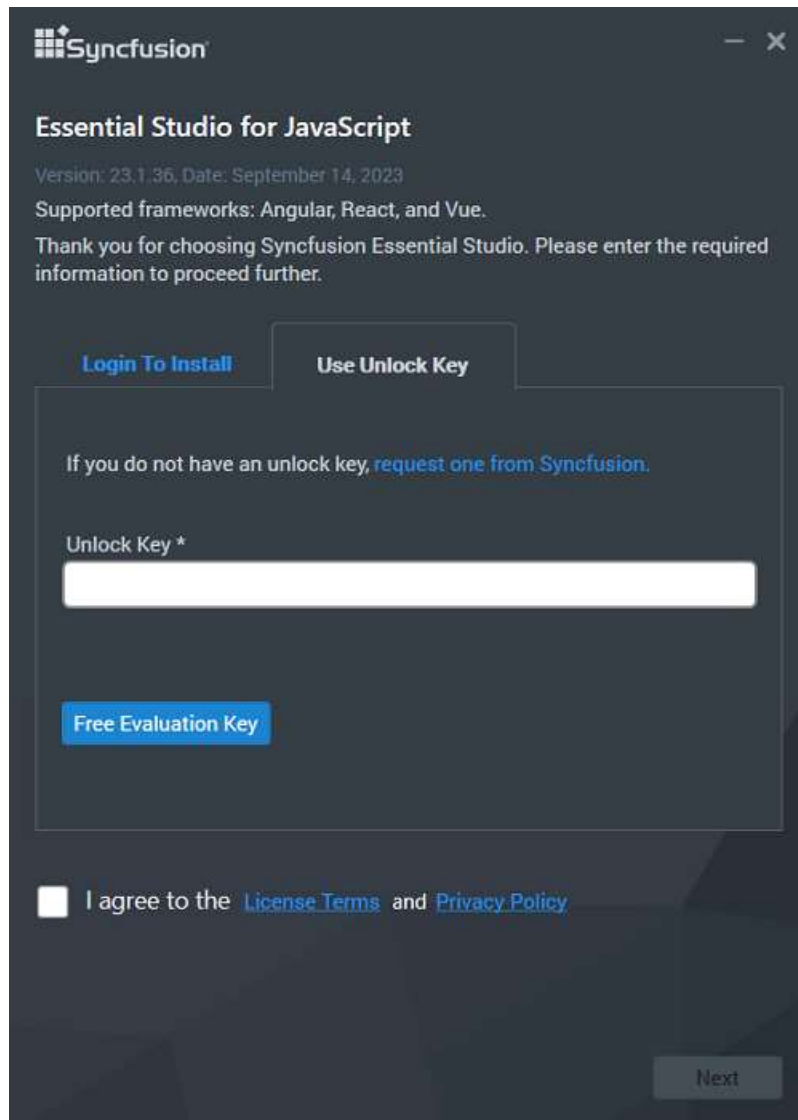

Next

### Use Unlock Key

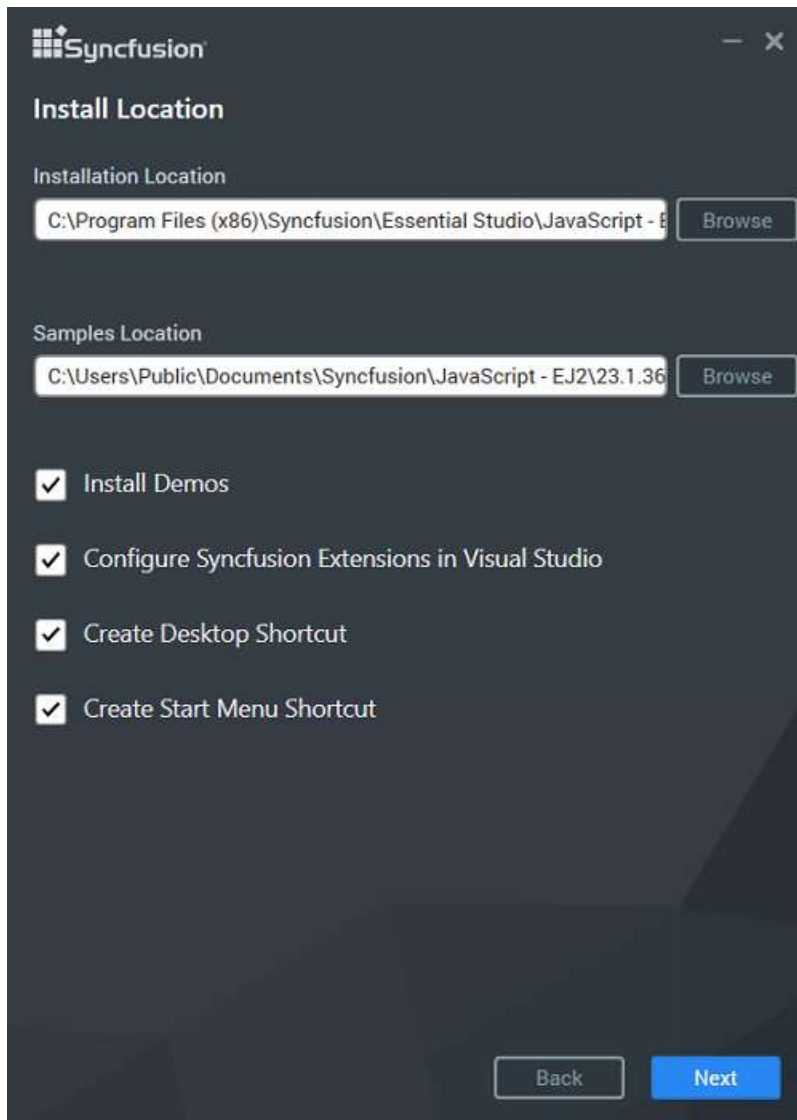

Unlock keys are used to unlock the Syncfusion offline installer, and they are platform and version specific. You should use either Syncfusion licensed or trial Unlock key to unlock Syncfusion JavaScript – EJ2 installer.

The trial unlock key is only valid for 30 days, and the installer will not accept an expired trial key.

To learn how to generate an unlock key for both trial and licensed products, see [this](#) Knowledge Base article.

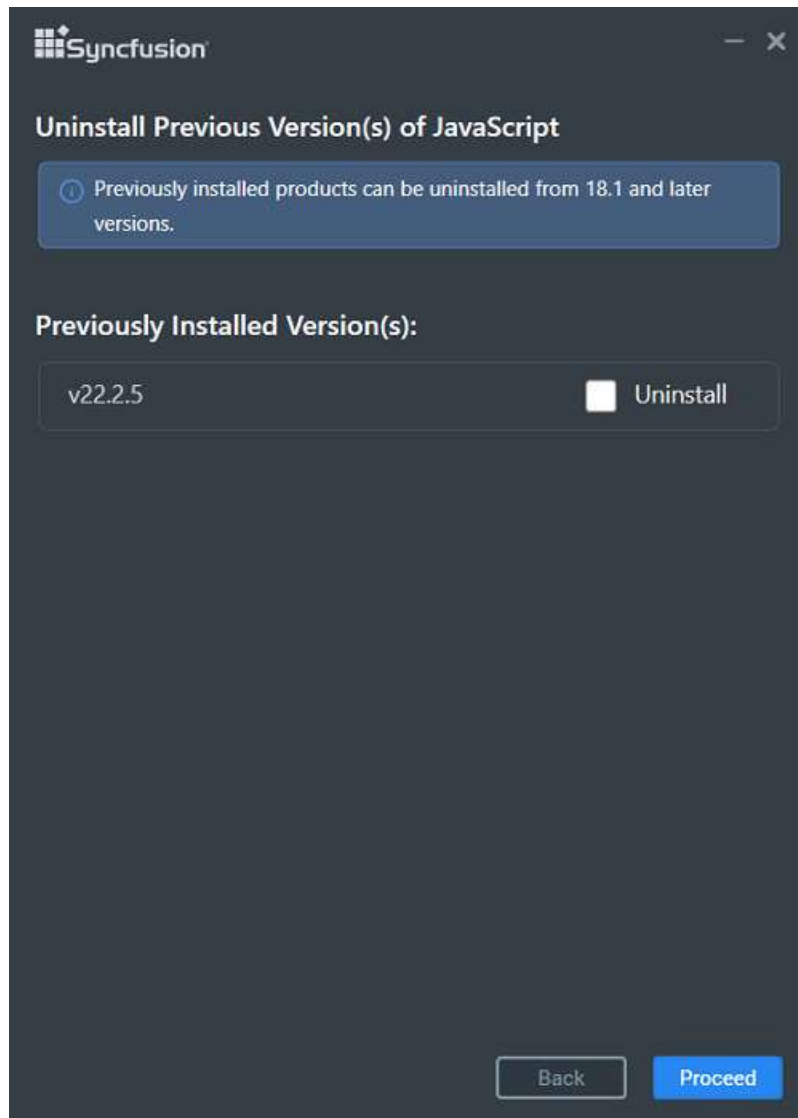

3. After reading the License Terms and Privacy Policy, check the **"I agree to the License Terms and Privacy Policy"** check box. Click the Next button.
4. Change the install and sample locations here. You can also change the Additional settings. Click Next/Install to install with the default settings.

### Additional settings

- Select the **Install Demos** check box to install Syncfusion samples, or leave the check box unchecked, if you do not want to install Syncfusion samples
  - Select the **Configure Syncfusion Extensions in Visual Studio** checkbox to configure the Syncfusion Extensions in Visual Studio or clear this check box when you do not want to configure the Syncfusion Extensions in Visual Studio.
  - Check the **Create Desktop Shortcut** checkbox to add a desktop shortcut for Syncfusion Control Panel
  - Check the **Create Start Menu Shortcut** checkbox to add a shortcut to the start menu for Syncfusion Control Panel
5. If any previous versions of the current product is installed, the **Uninstall Previous Version(s)** wizard will be opened. Select Uninstall checkbox to uninstall the previous versions and then click the Proceed button.

Note: From the 2021 Volume 1 release, Syncfusion has added the option to uninstall previous versions from 18.1 while installing the new version.

Note: If any version is selected to uninstall, a confirmation screen will appear; if continue is selected, the Progress screen will display the uninstall and install progress, respectively. If none of the versions are chosen to be uninstalled, only the installation progress will be displayed.

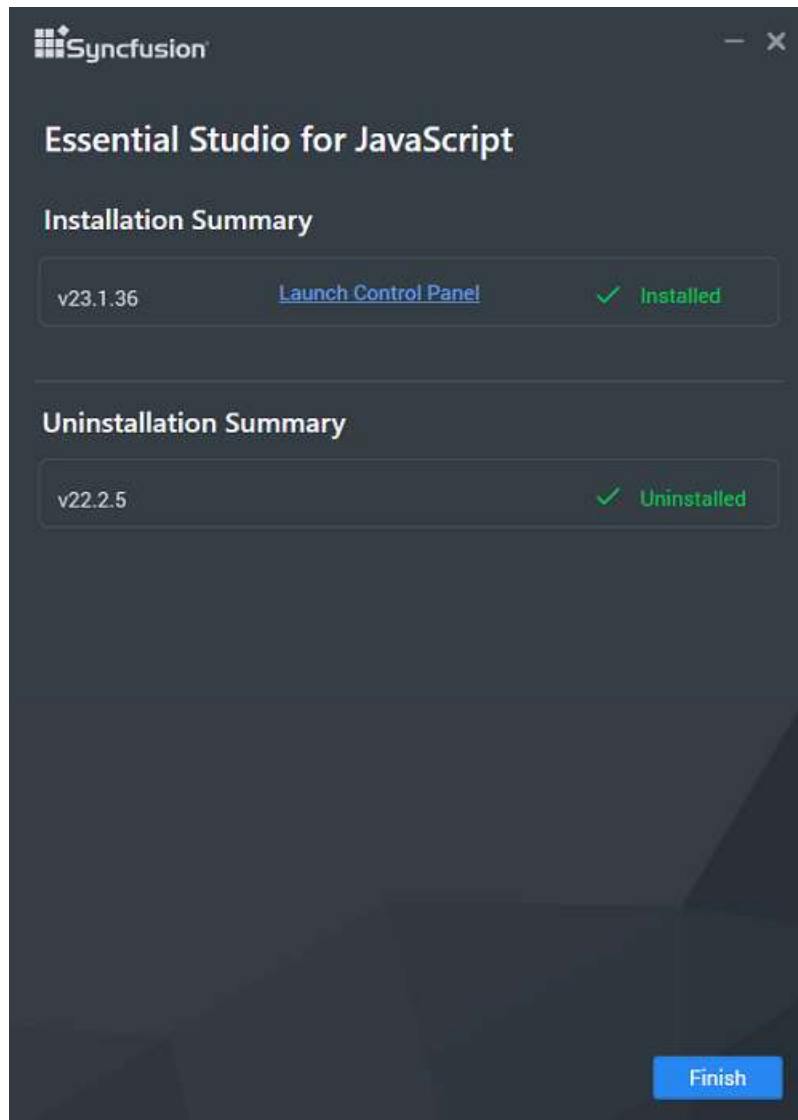

#### Confirmation alert

**Uninstall progress:**

**Install progress**

Note: The Completed screen is displayed once the JavaScript – EJ2 product is installed. If any version is selected to uninstall, The completed screen will display both install and uninstall status.

6. After installing, click the Launch Control Panel link to open the Syncfusion Control Panel.
7. Click the Finish button. Your system has been installed with the Syncfusion Essential Studio JavaScript – EJ2 product.

### Installing in silent mode

The Syncfusion Essential Studio JavaScript – EJ2 Installer supports installation and uninstallation via the command line.

#### Command line installation

To install through the Command Line in Silent mode, follow the steps below.

1. Run the Syncfusion JavaScript – EJ2 installer by double-clicking it. The Installer Wizard automatically opens and extracts the package.
2. The file `syncfusionejs2_(version).exe` file will be extracted into the Temp directory.
3. Run `%temp%`. The Temp folder will be opened. The `syncfusionejs2_(version).exe` file will be located in one of the folders.

4. Copy the extracted syncfusionejs2\_(version).exe file in local drive.
5. Exit the Wizard.
6. Run Command Prompt in administrator mode and enter the following arguments.

Arguments: "installer file path/SyncfusionEssentialStudio(product)\_(version).exe" /Install silent /UNLOCKKEY:"(product unlock key)" [/log "{Log file path}"] [/InstallPath:{Location to install}] [/InstallSamples:{true/false}] [/InstallAssemblies:{true/false}] [/UninstallExistAssemblies:{true/false}] [/InstallToolbox:{true/false}]

Note: [...] – Arguments inside the square brackets are optional.

**Example:** "D:/Temp/syncfusionejs2x.x.x.x.exe" /Install silent /UNLOCKKEY:"product unlock key" /log "C:/Temp/EssentialStudioPlatform.log" /InstallPath:C:/Syncfusion/x.x.x.x /InstallSamples:true /InstallAssemblies:true /UninstallExistAssemblies:true /InstallToolbox:true

7. Essential Studio for JavaScript (Essential JS2) is installed.

Note: x.x.x.x should be replaced with the Essential Studio version and the Product Unlock Key needs to be replaced with the Unlock Key for that version.

#### *Command line uninstallation*

Syncfusion Essential JavaScript – EJ2 can be uninstalled silently using the Command Line.

1. Run the Syncfusion JavaScript – EJ2 installer by double-clicking it. The Installer Wizard automatically opens and extracts the package.
2. The syncfusionejs2\_(version).exe file will be extracted into the Temp directory.
3. Run %temp%. The Temp folder will be opened. The syncfusionejs2\_(version).exe file will be located in one of the folders.
4. Copy the extracted syncfusionejs2\_(version).exe file in local drive.
5. Exit the Wizard.
6. Run Command Prompt in administrator mode and enter the following arguments.

Arguments: "Copied installer file path/ syncfusionejs2\_(version).exe" /uninstall silent

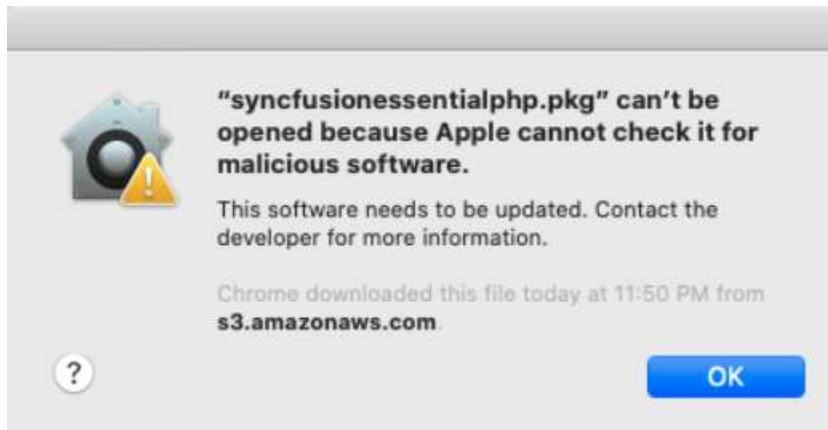

Example: "D:/Temp/syncfusionejs2\_x.x.x.x.exe" /uninstall silent

7. Essential Studio for JavaScript (Essential JS2) is uninstalled.

#### *Installing Syncfusion JavaScript – EJ2 Mac Installer*

*Steps to resolve the warning message in Catalina OS or later*

While running Essential Studio JavaScript - EJ2 Mac Installer on Catalina MacOS or later, the below alert will be displayed.

If you receive this alert, follow the below steps for the easiest solution.

1. Right-click the downloaded pkg file.
2. Select the "Open With" option and choose "Installer (Default)". The following pop-up appears.

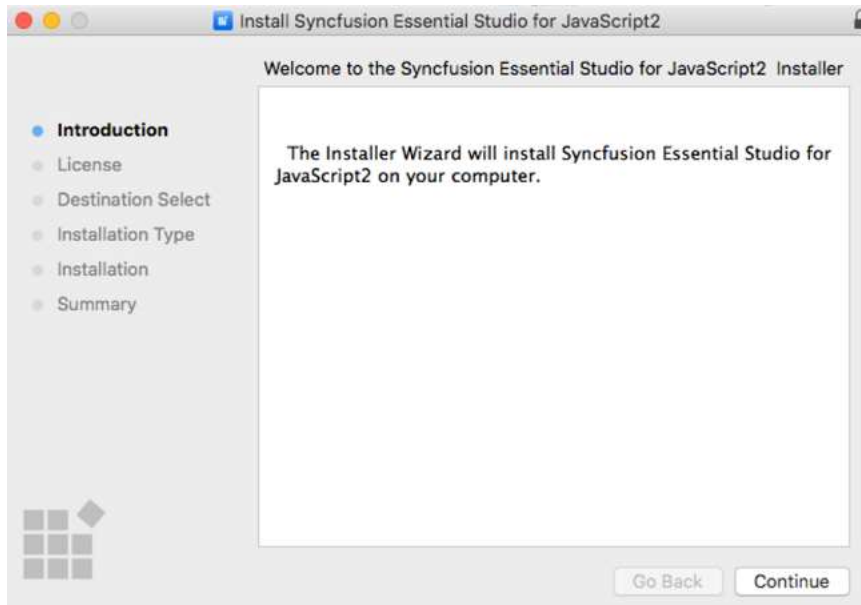

3. When you click "Open" the installer window will be opened.

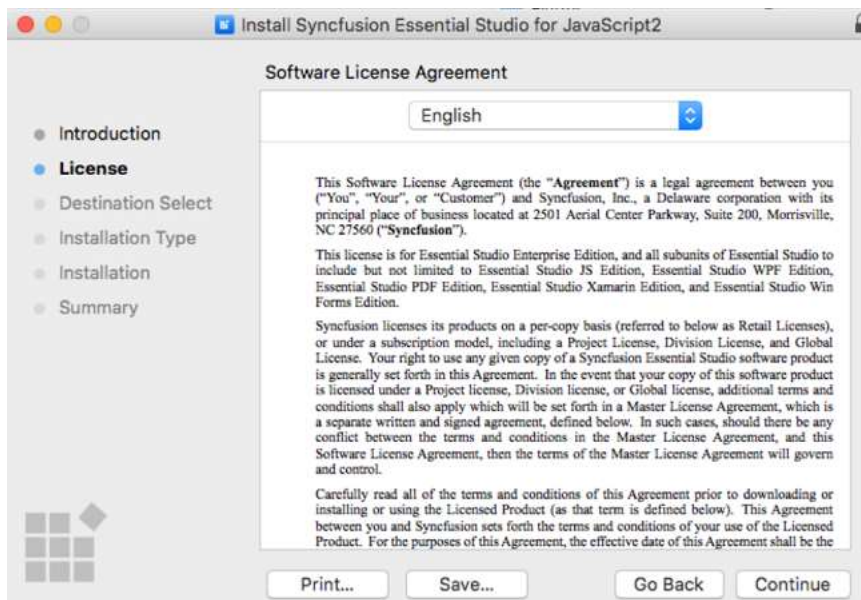

### Step-by-Step Installation

The steps below show how to install the Essential Studio JavaScript - EJ2 Mac installer.

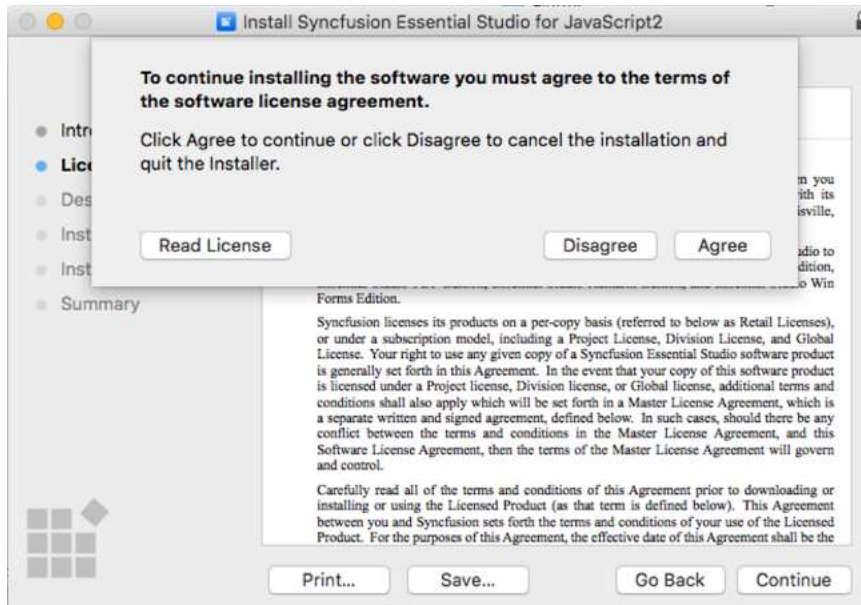

1. Double-click the Syncfusion Essential Studio JavaScript - EJ2 Mac installer(.pkg) file. The installer Wizard opens. Click Continue.

2. The Software License Agreement wizard will appear. Click the Continue button.

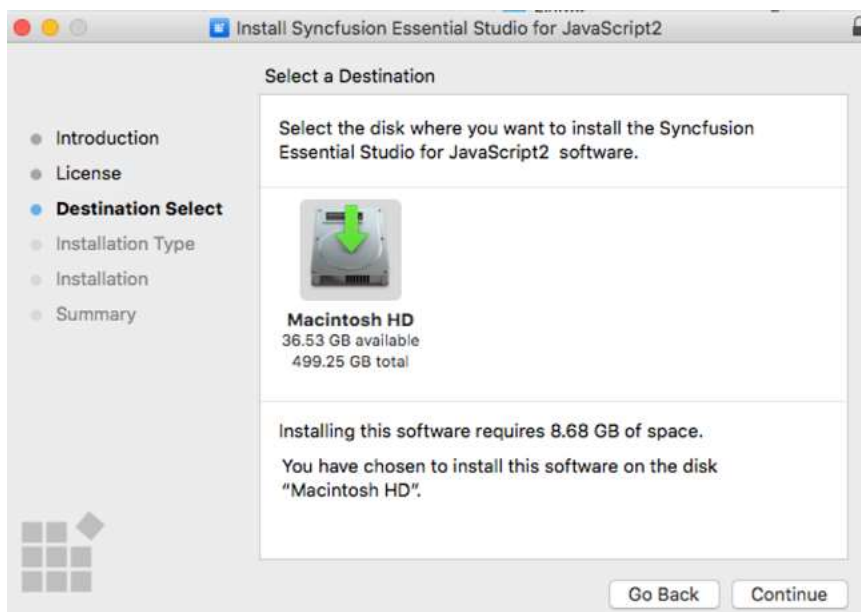

3. The License Agreement's Confirmation window will appear. If you have read the Software License Agreement, click **Agree**.

**Note:** The Unlock key is not required to install the Mac installer. The Syncfusion Essential Studio JavaScript - EJ2 Mac installer can be used for development purposes without registering the Unlock key.

4. The Destination select wizard will appear. You can choose which disc to install the Syncfusion Essential Studio for JavaScript - EJ2 Mac installer on here.

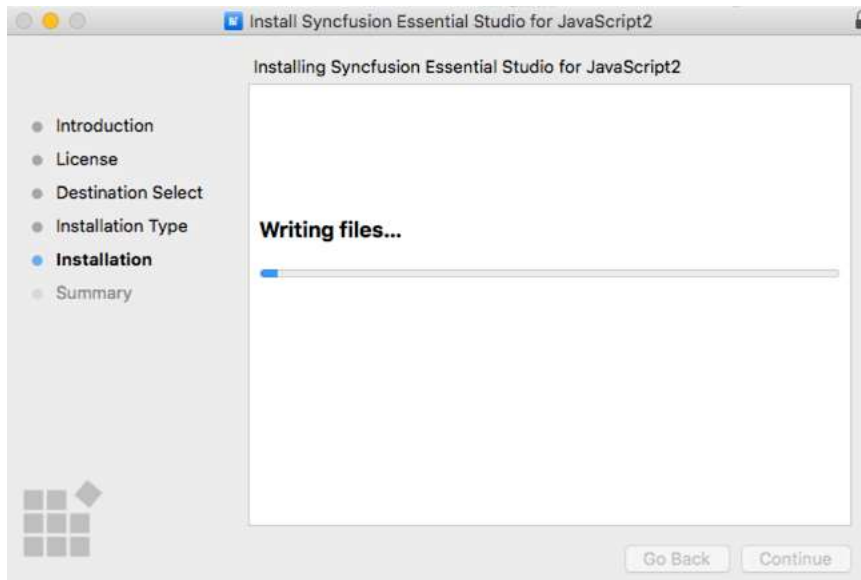

5. The Installation Type wizard will appear. Click Install to begin the standard installation of the Syncfusion Essential Studio JavaScript - EJ2 Mac installer.

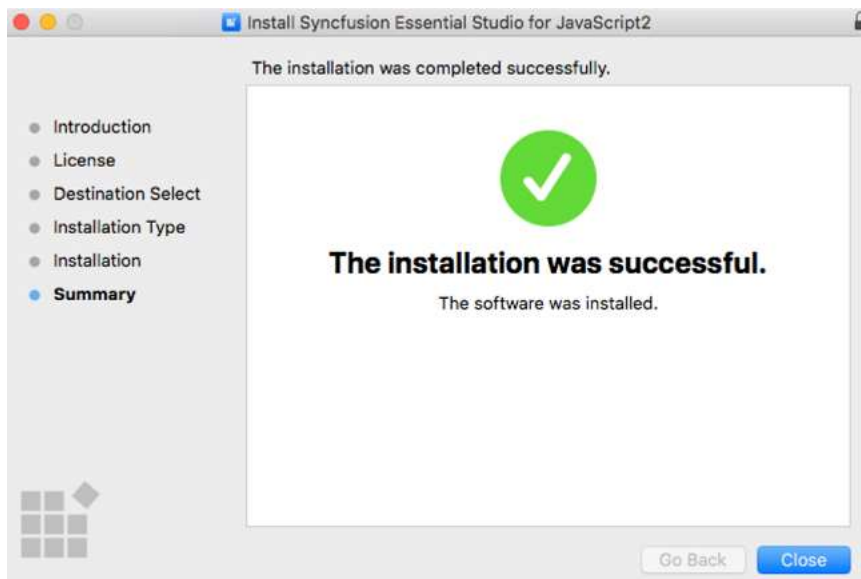

6. The Authentication window will appear. To begin the installation, enter the Mac machine's password and click **Install Software**.

7. The installation process will begin on your machine.

8. Once the installation is complete, the completed screen will be displayed. To exit the installation wizard, click Close.

By default, Mac installer will install the files in following location.

**Location:** {Documents}\Syncfusion\ {version}\ {platform}

### License key registration in samples

After the installation, the license key is required to register the demo source that is included in the Mac installer. To learn about the steps for license registration for the JavaScript - EJ2 Mac installer, please refer to this.

- [Register Syncfusion License key in the project](#)
- [Register Syncfusion license key in the Nuxt project](#)
- [Register the license key using the npx command](#)

### Linux Installer

#### Download Syncfusion JavaScript Linux Installer

The Syncfusion installer can be downloaded from the [Syncfusion](#) website. You can either download the licensed installer or try our trial installer depending on your license.

- Trial Installer - Licensed Installer

You can download the Syncfusion installer from [Syncfusion.com](#) website

#### *Download the Trial Version*

Our 30-day trial can be downloaded in two ways.

- Download Free Trial Setup
- Start Trials if using components through [NuGet.org](#)

#### Download Free Trial Setup

1. You can evaluate our 30-day free trial by visiting the [Download Free Trial](#) page and select the product
2. After completing the required form or logging in with your registered Syncfusion account, you can download the trial installer from the confirmation page. (as shown in below screenshot.)

## Thank you for choosing to evaluate Essential Studio for JavaScript!

Please choose your preferred evaluation experience to proceed.

Starting with v20.1.0.47 (2022 Vol. 1), we're providing licensing support for Essential Studio for JavaScript. Please refer to this [help topic](#) for more information.

### Full installation evaluation

Download and install the evaluation version of the full product along with all the required assemblies and demo code.

Choose Platform

Choose Download Format

[What's New](#) | [Generate License File](#) | [Get Unlock Key](#)

[Download](#) **1**

[More Download Options](#) **2**

6. Click the More Download Options (element 2 in the above screenshot) button to get the JavaScript Product Offline trial installer which is available in ZIP format.

Start Trials if using components through [NuGet.org](https://www.nuget.org/packages?q=syncfusion)

You should initiate an evaluation if you have already obtained our components through [NuGet.org](https://www.nuget.org/packages?q=syncfusion)

1. You can start your 30-day free trial from the [Start Trial](#) page from your account.

**Note:** You can generate the license key for your active trial products from [Trials & Downloads](#) page. This license key will be mandatory to use our trial products in your application. To know more about License key, refer this [help topic](#).

2. To access this page, you must sign up\log in with your Syncfusion account.
3. Begin your trial by selecting the Syncfusion product.

**Note:** If you've already used the trial products and they haven't expired, you won't be able to start the trial for the same product again.

4. After you've started the trial, go to the [Trials & Downloads](#) page to get the latest version trial installer. You can generate the [unlock key](#) and [license key](#) here at any time before the trial period expires. (as shown in below screenshot.)

5. You can find your current active trial products on the [Trials & Downloads](#) page.

#### *Download the License Version*

1. Syncfusion licensed products will be available in the [License & Downloads](#) page under your registered Syncfusion account.
2. You can view all the licenses (both active and expired) associated with your account.
3. You can download JavaScript Linux licensed installer by going to More Downloads Options (element 3 in the screenshot below).

4. Unlock key is not required to install the Syncfusion JavaScript Linux trial installer.
5. For Linux OS, ZIP formats is available for download.

### Installing Syncfusion JavaScript Linux installer

#### *Step-by-Step Installation*

The steps below show how to install JavaScript Linux installer.

1. Extract the Syncfusion JavaScript Linux installer(.zip) file. The files are extracted in your machine.

2. The Linux zip file contains the following folders.

**Note:** The Unlock key is not required to install the Linux installer.

4. You can launch the demo source and use the NuGet packages included in the Linux installer.

### [License key registration in samples](#)

After the installation, the license key is required to register the demo source that is included in the Linux installer. To learn about the steps for license registration for the JavaScript - EJ2 Linux installer, please refer to this.

- [Register Syncfusion License key in the project](#)
- [Register Syncfusion license key in the Nuxt project](#)
- [Register the license key using the npx command](#)

### Common Installation Errors

This article describes the most common installation errors, as well as the causes and solutions to those errors.

- Unlocking the license installer using the trial key
- License has expired
- Unable to find a valid license or trial
- Unable to install because of another installation
- Unable to install due to controlled folder access

#### Unlocking the license installer using the trial key

**Error message:** Sorry, the provided unlock key is a trial unlock key and cannot be used to unlock the licensed version of our Essential Studio for JavaScript installer.

**Reason** <br /> You are attempting to use a Trial unlock key to unlock the licensed installer.

**Suggested solution** <br /> Only a licensed unlock key can unlock a licensed installer. So, to unlock the Licensed installer, use the Licensed unlock key. To generate the licensed unlock key, refer to [this](#) article.

#### License has expired

**Error message:** Your license for Syncfusion Essential Studio for JavaScript – EJ2 has been expired since {date}. Please renew your subscription and try again.

#### Online installer

**Reason** <br /> This error message will appear if your license has expired.

**Suggested solution** <br /> You can choose from the options below.

1. You can renew your subscription [here](#).
2. You can get a new license [here](#).
3. You can reach out to our sales team by emailing [sales@syncfusion.com](mailto:sales@syncfusion.com).
4. You can also extend the 30-day trial period after your trial license has expired.

Unable to find a valid license or trial

**Error message:** Sorry, we are unable to find a valid license or trial for Essential Studio for JavaScript – EJ2 under your account.

**Offline installer**

**Online installer**

**Reason** <br /> The following are possible causes of this error:

The following are possible causes of this error:

- When your trial period expired
- When you don't have a license or an active trial
- You are not the license holder of your license
- Your account administrator has not yet assigned you a license.

**Suggested solution** <br />

1. You can get a new license [here](#).
2. Contact your account administrator.
3. Send an email to [clientrelations@syncfusion.com](mailto:clientrelations@syncfusion.com) to request a license.
4. You can reach out to our sales team by emailing [sales@syncfusion.com](mailto:sales@syncfusion.com).

Unable to install because of another installation

**Error message:** Another installation is in progress. You cannot start this installation without completing all other currently active installations. Click cancel to end this installer or retry to attempt after currently active installation completed to install again.

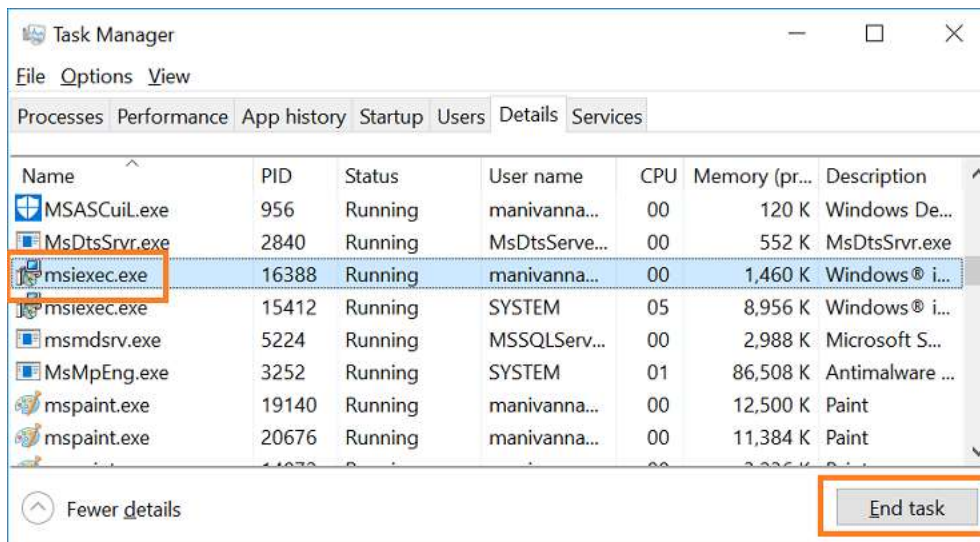

**Reason** <br /> You are trying to install when another installation is already running in your machine.

**Suggested solution** <br /> Open and kill the msixec process in the task manager and then continue to install Syncfusion. If the problem is still present, restart the computer and try Syncfusion installer.

1. Open the Windows Task Manager.
2. Browse the Details tab.
3. Select the msixec.exe and click **End task**.

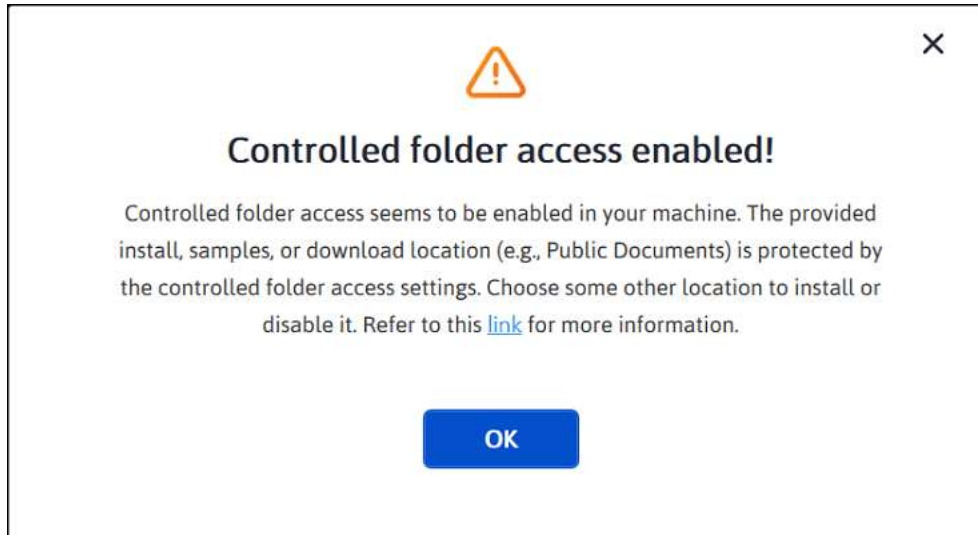

Unable to install due to controlled folder access

### Offline

**Error message:** Controlled folder access seems to be enabled in your machine. The provided install or samples location (e.g., Public Documents) is protected by the controlled folder access settings.

**Online**

**Error message:** Controlled folder access seems to be enabled in your machine. The provided install, samples, or download location (e.g., Public Documents) is protected by the controlled folder access settings.

**Reason** <br /> You have enabled controlled folder access settings on your computer.

**Suggested solution****Suggestion 1:** <br />

1. We will ship our demos in the public documents folder by default.
2. You have controlled folder access enabled on your machine, so our demos cannot be installed in the documents folder. If you need to install our demos in the Documents folder, follow the steps in this [link](#) and disable the controlled folder access.
3. You can enable this option after the installing our Syncfusion setup.

**Suggestion 2:** <br />

1. If you do not want to disable controlled folder access, you can install our demos in another directory.

## Upgrade

### Syncfusion Vue supported versions

#### Vue version compatibility

The following table represents the supported Vue versions by different Syncfusion Vue UI components releases.

Version	Syncfusion Vue components version
-----	-----
<a href="#">Vue v2.7</a>	20.3.47 and above
<a href="#">Vue v3.0</a>	19.2.44 and above

#### Syncfusion version information

Syncfusion follows a quarterly release schedule, introducing new volumes every three months. To track these releases and their associated changes, Syncfusion Vue components utilize a sequence-based identifier system, employing the format **Major.Minor.Revision**. This system enables developers to easily monitor modifications made in each release.

For example, if the release package version is **22.1.34**, the version number can be interpreted as follows:

- **22** represents the **major release** version. This number changes every three months and encompasses significant updates, new features, as well as bug fixes and breaking changes.
- **1** corresponds to the **minor release** version. This number signifies releases primarily focused on new features and addressing bugs, without introducing breaking changes.
- **34** denotes the **revision number**, also referred to as the **patch number**. This number increases for weekly patch releases, which predominantly consist of bug fixes and do not introduce new features or breaking changes.

See also

- [Syncfusion product release lifecycle](#)
- [Upgrade guide](#)

### Upgrading Syncfusion JavaScript (Essential JS2)

Syncfusion releases new volumes once every three months, with exciting new features. There will be one Service Pack release for these volume releases. Service Pack releases are provided to address major bug fixes in the volume releases.

You can upgrade to our latest version from any installed Syncfusion version.

See our "[Upgrade Guide](#)" for JavaScript – EJ2 to learn more about the “**Breaking Changes, Bug Fixes, Features and Known Issues**” between your current version and the latest version you are trying to upgrade.

#### Upgrading to the latest version

The most recent version of Syncfusion JavaScript – EJ2 can be downloaded and installed by clicking on the “Latest Version: {Version}” link at the top of the Syncfusion JavaScript – EJ2 Control Panel.

You can also upgrade to the latest version just by downloading and installing the products you require from [this](#) link. The existing installed versions are not required to be uninstalled.

It is not required to install the Volume release before installing the Service Pack release. As releases for Volume and Service Packs work independently, you can install the latest version with major bug fixes directly.

#### Upgrade from trial version to license version

Uninstall the trial version and install the fully licensed installer from the [License and Downloads](#) section of our website to upgrade from the trial version.

Note: License key registration is not required for JavaScript, if you are using scripts (.js) and css files.

## Licensing

### Syncfusion Licensing Overview

We have introduced license key validation for Essential JS2 platforms from the 2022 Volume 1 release. This licensing key validation will enforce the developer to register the valid licensing key in an application while referring to any of the latest JavaScript packages, either from npm or CDN or build.

License key can be obtained from the [My Account >> License and downloads](#) section of the Syncfusion website. To obtain a license key, you will need to have an active trial or license or community license.

Before using any JavaScript controls, you must register the obtained license key in the application code. Otherwise you will get license validation error message in application as shown in below

This application was built using a trial version of Syncfusion Essential Studio. Please include a valid license to permanently remove this license validation message. You can also obtain a free 30 day evaluation license to temporarily remove this message during the evaluation period. Please refer to this [help topic](#) for more information.

#### Difference between unlock key and license key

Please note that this license key is different from the installer unlock key that you might have used in the past and needs to be separately generated from Syncfusion website.

- **Unlock Key** - Syncfusion Unlock Key is used to unlock the Syncfusion installers alone.
- **License Key** - Syncfusion License Key is a string that needs to be registered in your script to avoid licensing warning.

Refer to [this](#) KB article to know more about difference between the Syncfusion Unlock Key and the Syncfusion License Key.

#### Registering Syncfusion license keys in Build server

| Source of Syncfusion assemblies | Details | License Key needs to be registered? | Where to get license key from |

| ----- | ----- | ----- | ----- |

| **NuGet package** | If the Syncfusion assemblies used in Build Server were from the Syncfusion NuGet packages, then no need to install any Syncfusion installer. We can directly use the required Syncfusion NuGet packages at [nuget.org](https://nuget.org). <br><br>But, if using NuGet packages from the [nuget.org](https://nuget.org), then we should register the Syncfusion license key in the application. | Yes | Use any developer license to [generate](#) keys for Build Environments as well. |

| **Trial installer** | If the Syncfusion assemblies used in Build Server were from Trial Installer, we should register the license key in the application for the corresponding version and platforms, to avoid trial license warning. | Yes | Use any developer trial license to [generate](#) keys for Build Environments as well. |

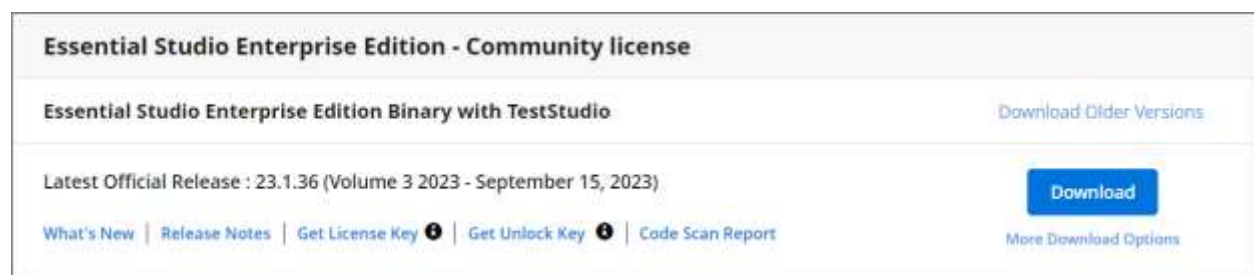

| **Licensed installer** | If the Syncfusion assemblies used in Build Server were from Licensed Installer, then there is no need to register the license keys.<br><br>You can [download](#) and [install](#) the licensed version of our installer. | No | Not applicable |

- [Licensing FAQ](#)

#### Generate Syncfusion Vue License key

License keys can be generated from the [License & Downloads](#) or [Trial & Downloads](#) section of the Syncfusion website.

\* Syncfusion license keys are **version and platform specific**. Refer to the [KB](#) to generate the license key for the required version and platform.

\* Refer to this [KB](#) to know which version of the Syncfusion license key should be used in the application.

#### Claim license key

Syncfusion License keys can also be generated from the “**Claim License Key**” page based on the trial or valid license associated with your Syncfusion account.

You can get the license key, based on license availability in your Syncfusion account.

### Active license

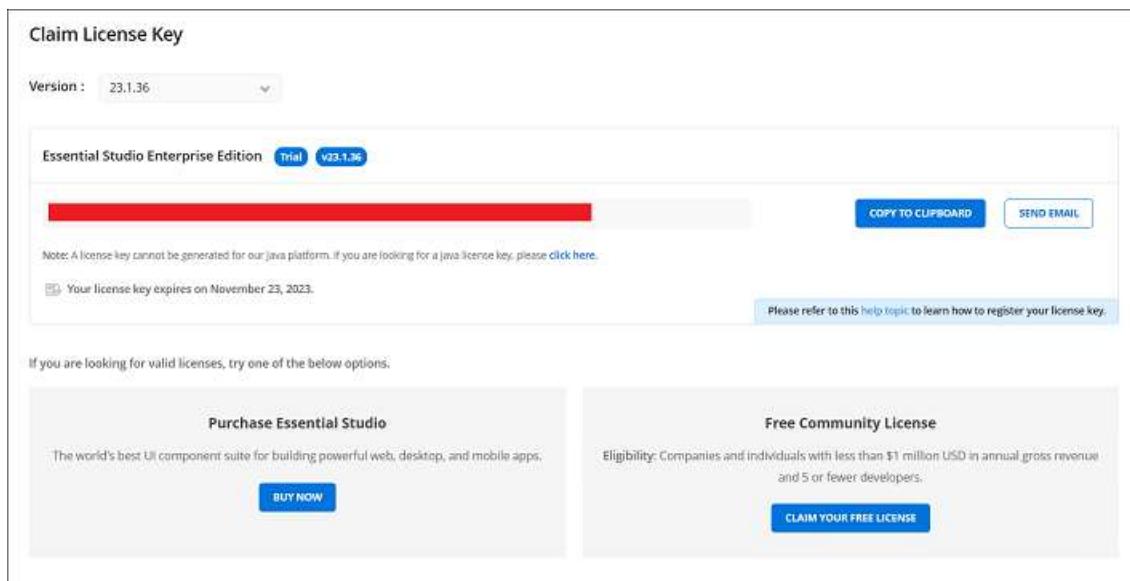

If you have a Syncfusion account associated with valid license, license key will be generated from claim license key page.

The screenshot shows the 'Claim License Key' interface. At the top, there's a 'Version' dropdown set to '23.1.36'. Below it, the product is identified as 'Essential Studio Enterprise Edition' with a 'v23.1.36' badge. A large red rectangular area represents the generated license key. To the right of this area are two buttons: 'COPY TO CLIPBOARD' and 'SEND EMAIL'. Below the key area, there is a note: 'For more details about this generated key, [click here](#).' and another note: 'Note: A license key cannot be generated for our Java platform. If you are looking for a Java license key, please [click here](#).' At the bottom right, a small blue box contains the text: 'Please refer to this [help topic](#) to learn how to register your license key.'

### Active trial

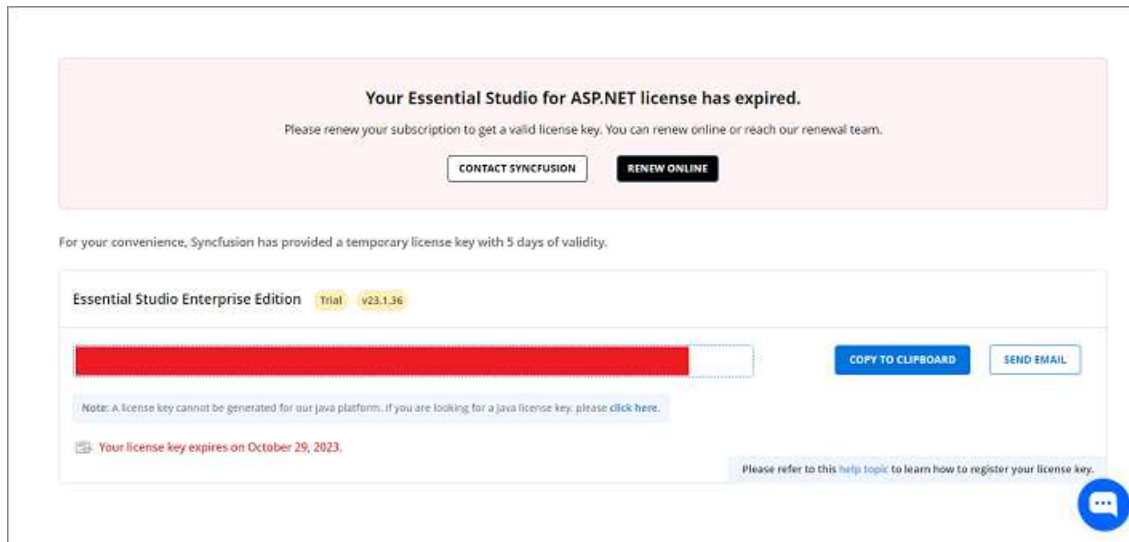

If you have a Syncfusion account associated with valid trial license, license key will be generated from claim license key page with expiry date.

This screenshot shows the 'Claim License Key' page for a trial license. The layout is similar to the active license page, but the product is 'Essential Studio Enterprise Edition' with a 'Trial' badge and 'v23.1.36' version. The license key area is represented by a red rectangle. The 'COPY TO CLIPBOARD' and 'SEND EMAIL' buttons are present. A note below the key states: 'Note: A license key cannot be generated for our Java platform. If you are looking for a Java license key, please [click here](#).' Below this, a message indicates: 'Your license key expires on November 23, 2023.' The same bottom-right note about the Java platform and help topic is present. At the bottom, there are two promotional boxes: 'Purchase Essential Studio' with a 'BUY NOW' button, and 'Free Community License' with a 'CLAIM YOUR FREE LICENSE' button. The 'Free Community License' box includes eligibility criteria: 'Eligibility: Companies and individuals with less than \$1 million USD in annual gross revenue and 5 or fewer developers.'

### Expired license

If you have a Syncfusion account with an expired license, your license subscription must be renewed in order to obtain a valid license key for the latest Essential Studio version. Meanwhile, a temporary license key with a five day validity period will be generated.

**Your Essential Studio for ASP.NET license has expired.**

Please renew your subscription to get a valid license key. You can renew online or reach our renewal team.

[CONTACT SYNCFUSION](#) [RENEW ONLINE](#)

For your convenience, Syncfusion has provided a temporary license key with 5 days of validity.

Essential Studio Enterprise Edition **Trial** v23.1.36

[Redacted License Key]

[COPY TO CLIPBOARD](#) [SEND EMAIL](#)

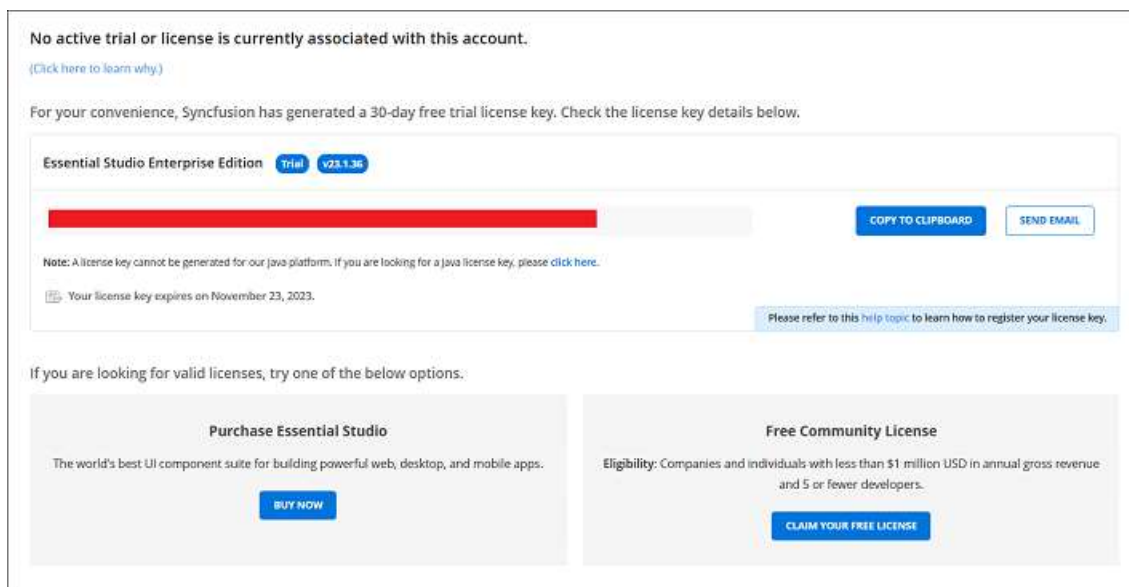

Note: A license key cannot be generated for our Java platform. If you are looking for a Java license key, please [click here](#).

Your license key expires on October 29, 2023.

Please refer to this [help topic](#) to learn how to register your license key.

### *No trial or no license or expired trial*

If the Syncfusion account is not associated with a trial, license, or expired trial, you can try to claim either a trial or a valid license from claim license page.

No active trial or license is currently associated with this account.

[\(Click here to learn why\)](#)

For your convenience, Syncfusion has generated a 30-day free trial license key. Check the license key details below.

Essential Studio Enterprise Edition **Trial** v23.1.36

[Redacted License Key]

[COPY TO CLIPBOARD](#) [SEND EMAIL](#)

Note: A license key cannot be generated for our Java platform. If you are looking for a Java license key, please [click here](#).

Your license key expires on November 23, 2023.

Please refer to this [help topic](#) to learn how to register your license key.

If you are looking for valid licenses, try one of the below options:

**Purchase Essential Studio**

The world's best UI component suite for building powerful web, desktop, and mobile apps.

[BUY NOW](#)

**Free Community License**

Eligibility: Companies and individuals with less than \$1 million USD in annual gross revenue and 5 or fewer developers.

[CLAIM YOUR FREE LICENSE](#)

- [How to register Syncfusion license key in the application?](#)
- [Licensing FAQ](#)

### Register Syncfusion License key in Vue application

Syncfusion license key should be registered, if your project using Syncfusion Vue packages reference. The generated license key is a string that needs to be registered after any [Syncfusion Vue reference](#).

Note: Syncfusion license validation is done offline during application execution and does not require internet access. Apps registered with a Syncfusion license key can be deployed on any system that does not have an internet connection.

Generate the [Syncfusion license key](#) and register it in one of the following ways,

- [Register the license key in the project](#)
- [Register the license key in the Nuxt project](#)
- [Register the license key using the npx command](#)

#### Register Syncfusion license key in the project

Register the license key in the `main.js` file of the Vue project.

```
`ts
import { createApp } from 'vue'
import App from './App.vue'
import { registerLicense } from '@syncfusion/ej2-base';
// Registering Syncfusion license key
registerLicense('Replace your generated license key here');
createApp(App).mount('#app')
`
```

Only from 2022 Vol 1 v20.1.0.47, license key registration required for Essential JavaScript 2 products.

#### Register Syncfusion license key in the Nuxt project

Register the license key in the `index.js` file of the Nuxt project.

```
`ts
import Vue from 'vue'
import { registerLicense } from '@syncfusion/ej2-base';
// Registering Syncfusion license key.
registerLicense('Replace your generated license key here');
// Component: <ClientOnly>
Vue.component(ClientOnly.name, ClientOnly)
`
```

#### Register Syncfusion license key using the npx command

Register the Syncfusion license key through npx command in one of the following ways,

- [Register the license key with the license file](#)
- [Register the license key with the environment variable](#)

If both the license text file and the environment variable are used for license registration, priority is set to `syncfusion-license.txt` file. If you want to use the environment variable for license registration, then remove the license text file from the application.

#### *Register the license key with the license file*

The following steps show how to register the Syncfusion license key with the license text file.

- Create the `syncfusion-license.txt` file in the application root directory and paste the license key.
- Open the command prompt in the application root directory and activate the license key by using the below command,

```
npx syncfusion-license activate
```

- Once the Syncfusion license key is activated, the following console message will appear.

**License message:** `<br />` (INFO) Syncfusion License imported successfully.

- Remove the `.cache` folder from node modules in the application.
- Now run the application. If you are facing a license validation error, refer to this [link](#) to resolve it. Also, find the most frequent license registration questions from this [link](#).

If you don't want to use the license text file in the application, refer to this [link](#) to use an environment variable and register the Syncfusion license key.

*Register the license key with the environment variable*

You can set the environment variable as `SYNCFUSION_LICENSE` in the system and paste the license key as a value. It can be used in all applications on your machine.

The following steps show how to set environment variable in different operating systems and register the Syncfusion license key.

- Set the environment variable in different operating systems like below,

#### Windows

- Open the command prompt and use `setx` command to add the new environment variable.

```
setx SYNCFUSION_LICENSE "license key"
```

#### Mac

- Open the terminal and use the `env` command to view the variables list.
- You can set the environment variable by using below command,

```
echo 'export SYNCFUSIONLICENSE="license key"' >> ~/.bashprofile
```

- If you want to modify the environment variable in the bash profile. Use the below command,

```
nano .bash_profile
```

- Once modified the variable. Press `ctrl+x` to exit then `Y` and `Enter` button to save the changes.
- Close the terminal and open it again to see the environment variables changes using `env` command.

## Linux

- Open the terminal and use the `env` command to view the variables list.
- You can set or modify the [environment variable](#) by using below command,

```
export SYNCFUSION_LICENSE='license key'
```

- Once set the `SYNCFUSION_LICENSE` environment variable, restart the IDE or application terminal before using the license activation command.
- Open the command prompt in the application root directory and activate the license key by using the below command,

```
npx syncfusion-license activate
```

- Once the Syncfusion license key is activated, the following console message will appear.

**License message:** `<br />` (INFO) Syncfusion License imported successfully.

- Remove the `.cache` folder from node modules in the application.
- Now run the application. If you are facing a license validation error, refer to this [link](#) to resolve it. Also, find the most frequent license registration questions from this [link](#).

## Register Syncfusion license key in CI services

The following sections show how to use an environment variable in CI services.

### GitHub actions

- Create a [new Repository Secret](#) or an [Organization Secret](#). Set the name of the secret to `SYNCFUSION_LICENSE` and use the license key as a value.
- Add the Syncfusion license activation command after running npm install or yarn like below,

```
`bash
```

```
steps:
```

- name: Install node modules

```
run: npm install
```

- name: Activate Syncfusion License

```
run: npx syncfusion-license activate
```

```
env:
```

```
SYNCFUSIONLICENSE: ${{ secrets.SYNCFUSIONLICENSE }}
```

```
,
```

#### Azure Pipelines (YAML)

- Create a new [User-defined Variable](#) named `SYNCFUSION_LICENSE`. Use the license key as a value.
- Add the Syncfusion license activation command after running npm install or yarn like below,

The following example shows the syntax for Windows build agents.

```
`bash
```

```
pool:
```

```
vmImage: 'windows-latest'
```

```
steps:
```

- script: call npm install

```
displayName: 'Install node modules'
```

- script: call npx syncfusion-license activate

```
displayName: 'Activate Syncfusion License'
```

```
env:
```

```
SYNCFUSIONLICENSE: $(SYNCFUSIONLICENSE)
```

```
,
```

The following example shows the syntax for Linux build agents.

```
`bash
```

```
pool:
```

```
vmImage: 'ubuntu-latest'
```

```
steps:
```

- script: npm install

displayName: 'Install node modules'

- script: npx syncfusion-license activate

displayName: 'Activate Syncfusion License'

env:

SYNCFUSIONLICENSE: \$(SYNCFUSIONLICENSE)

,

#### Azure Pipelines (Classic)

- Create a new [User-defined Variable](#) named `SYNCFUSION_LICENSE`. Use the license key as a value.
- Add the Syncfusion license activation command after running npm install or yarn using bash task like below,

`bash

#### Activate the license

npx syncfusion-license activate

,

← Bash ⓘ

Type ⓘ

☐ File Path

☒ Inline

Script \*

```
# Activate the license  
npx syncfusion-license activate
```

Advanced ▼

### Syncfusion Licensing Errors

Licensing error popup is displayed with various messages under different circumstances. Here are some ways to resolve different issues.

#### Licensing errors

##### *License key not registered\trial expired*

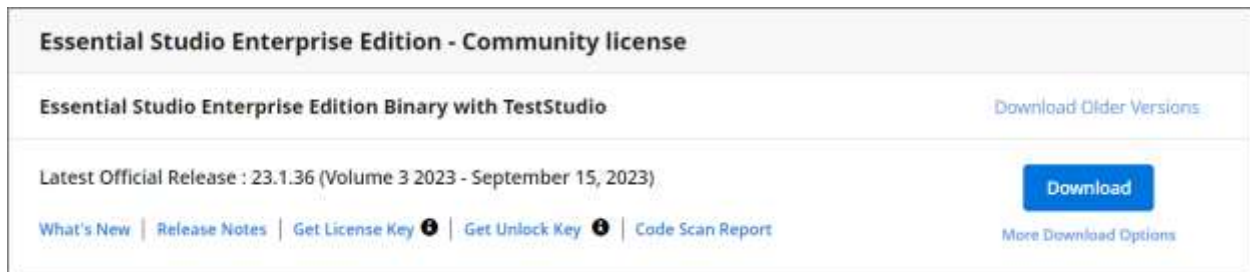

The following error message will be shown if a Syncfusion license key has not been registered in your application or if the trial key has expired after 30 days.

**Error message :** <br /> This application was built using a trial version of Syncfusion Essential Studio. You should include the valid license key to remove the license validation message permanently.

### Solution:

- If you use Vue components through syncfusion installer, you can choose from the options listed below
  1. If you **have a valid Syncfusion license**, you can **generate a license key for a specific version and product** from [this page](#).

2. If you **have a Syncfusion account and an active trial**, you can **generate the trial license key for a specific version and platform** from [this page](#).
3. If you **have a Syncfusion account but no active trials**, [purchase a license](#) or [start your 30-day free trial](#). Then you can generate the trial license key for **a specific version and platform** from [this page](#).
4. If you **do not already have a Syncfusion account**, you can create one [here](#) and [purchase a license](#) or start your 30-day free trial. Then you can **generate the trial license key for a specific version and platform** from [this page](#).
5. Also, you can generate the license key from claim license key page by clicking the **“Claim your FREE account”** click from the licensing warning message. Refer to this [help topic](#) for more details.
  - In your application, register the generated license key. Please refer to this [help topic](#) for information on registering the license key.

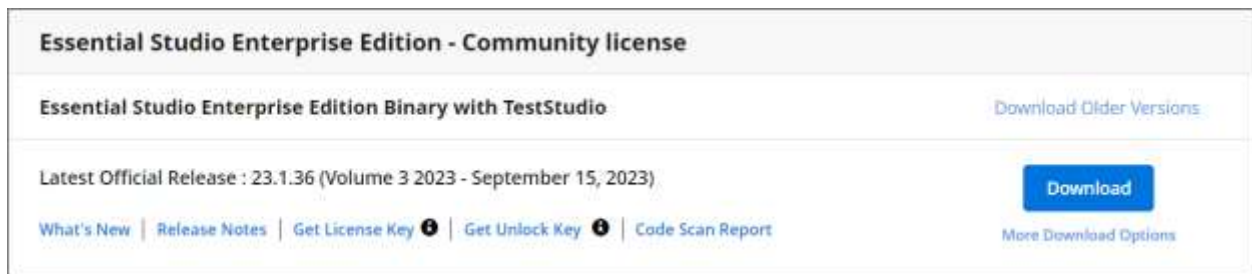

*Invalid key*

If the application is registered with an invalid key, another version of license key, or another platform's license key, the following error message will pop up when launching the application.

**Error Message:** The included Syncfusion license key is invalid.

**Solution:**

- If you use Vue components through syncfusion installer, you can choose from the options listed below
  1. If you have a valid Syncfusion license, you can **generate a license key for a specific version and product** from [this page](#).

2. If you have a Syncfusion account and an active trial, you can **generate the trial license key for a specific version and product** from [this page](#).
3. If you **have a Syncfusion account but no active trials**, [purchase a license](#) or [start your 30-day free trial](#). Then you can **generate the trial license key for a specific version and product** from [this page](#).
4. If you **do not already have a Syncfusion account**, you can create one here and [purchase a license](#) or [start your 30-day free trial](#). Then you can **generate the trial license key for a specific version and product** from [this page](#).
5. Also, you can generate the license key from claim license key page by clicking the **“Claim your FREE account”** click from the licensing warning message. Refer to this [help topic](#) for more details.

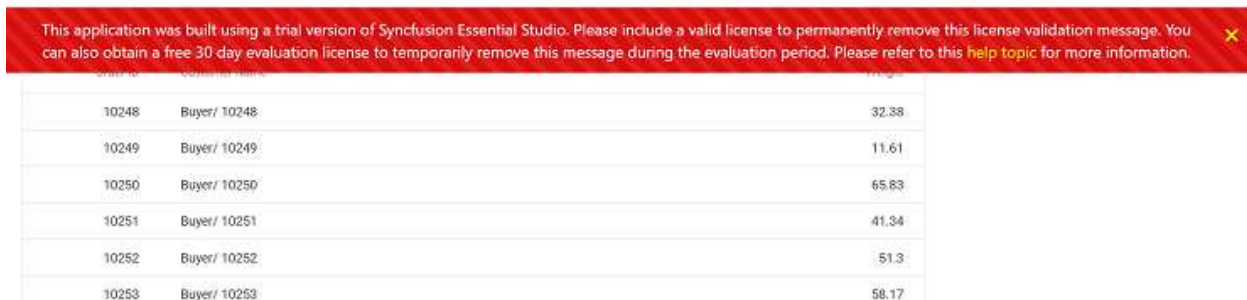

- In your application, register the generated license key. Please refer to this [help topic](#) for information on registering the license key.

Licensing errors from version 16.2.0\* to 20.3.0\*

#### *License key not registered*

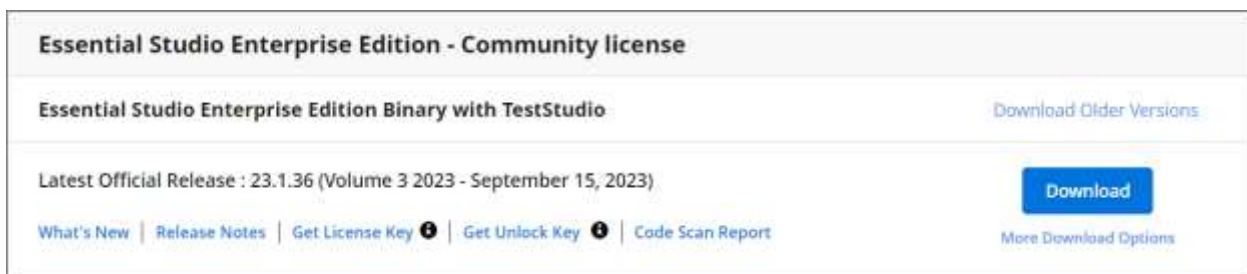

The following error message will be shown if a Syncfusion license key has not been registered in your application.

**Error message:** <br /> This application was built using a trial version of Syncfusion Essential Studio. Please include a valid license to permanently remove this license validation message. You can also obtain a free 30 day evaluation license to temporarily remove this message during the evaluation period. Please refer to this [help topic](#) for more information.

#### **Solution:**

- If you use Vue components through syncfusion installer, you can choose from the options listed below
  1. If you **have a valid Syncfusion license**, you can **generate a license key for a specific version and product** from [this page](#).

2. If you **have a Syncfusion account and an active trial**, you can **generate the trial license key for a specific version and platform** from [this page](#).
3. If you **have a Syncfusion account but no active trials**, [purchase a license](#) or [start your 30-day free trial](#). Then you can generate the trial license key for **a specific version and platform** from [this page](#).
4. If you **do not already have a Syncfusion account**, you can create one [here](#) and [purchase a license](#) or start your 30-day free trial. Then you can **generate the trial license key for a specific version and platform** from [this page](#).
  - In your application, register the generated license key. Please refer to this [help topic](#) for information on registering the license key.

*Invalid key*

If the application is registered with an invalid key, another version of license key, or another platform's license key, the following error message will pop up when launching the application.

**Error message:**   
The included Syncfusion license is invalid. Please refer to this [help topic](#) for more information.

The included Syncfusion license is invalid. Please refer to this <a href="#">help topic</a> for more information.

  - In your application, register the generated license key using the npx command. Please refer to this [help topic](#) for information on registering the license key.

## Licensing FAQ

### Is an internet connection required for license validation

No, Internet connection is not required for the Syncfusion Essential Studio license validation. The Syncfusion license validation is done offline during application execution. Apps registered with a Syncfusion license key can be deployed on any system that does not have an internet connection.

### Upgrade from the trial version after purchasing a license

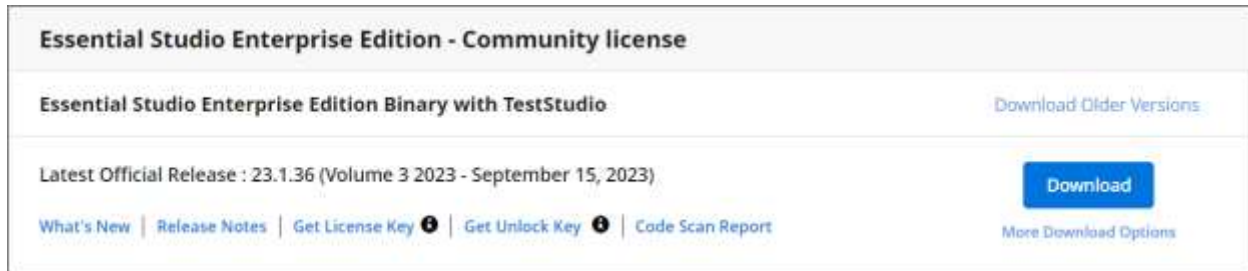

To upgrade from the trial version, there are two possible solutions:

- Uninstall the trial version and install the fully licensed build from the [License & Downloads](#) section of the Syncfusion website.
- If you are using Syncfusion controls from the [npm](#), replace the currently used trial license key with a paid license key that can be generated from the [License & Downloads](#) section of Syncfusion website. Refer to [this](#) topic for more information regarding registering the license in the application.

The license registration is not required if you reference Syncfusion scripts from the Licensed installer. These licensing changes apply to all evaluators who refer to the Syncfusion scripts from the evaluation installer and those who use the Syncfusion NuGet packages from [nuget.org](#).

### Where can I get a license key

License keys can be generated from the [License & Downloads](#) or the [Trial & Downloads](#) section of the Syncfusion website.

The Syncfusion license keys are the **version and platform-specific**, refer to the [KB](#) to generate the license key for the required version and platform. Also, refer to this [KB](#) to know which version of the Syncfusion license key should be used in the application.

While using the ASP.NET Core controls with the Javascript(ES5) components, you need to register the license key in both the Javascript(ES5) and the [ASP.NET core](#). Since the license is validated at the client side for Javascript(ES5) components and server-side for the ASP.NET core components.

#### [Will the registered license key expire](#)

No, the Syncfusion license keys won't expire for a particular version and you can continue to use it. So, you won't face any problems on the live site. If you have used the trial key, it will expire in 30 days and we don't recommend using it in production.

If you upgrade to newer versions of the Syncfusion packages, you have to generate new license keys and use them.

#### [When to generate new license key while upgrading](#)

You don't have to generate and change license keys for minor version upgrades. If you upgrade from one major version and another major version, you have to generate new license keys and register in the application.

For example,

- If you upgrade to weekly releases or the SP release in the same major version, you don't have to change license such as if you upgrade from the 20.1.47 version to 20.1.\* you don't have to change the license keys.
- If you upgrade from one major version to another major version, you have to generate new license keys for the latest version and change in the application, such as if you upgrade from the 20.1. version to 20.2., you have to generate new license keys for the latest version and change in the application.

#### [License registration for multiple developers on your project](#)

Syncfusion license key is a version based and it's not based on the developer. You don't have to register different keys for each developer. Just register one valid license key when developing and publishing the software.

#### [Can I use the same key for all the web apps under the project](#)

Yes, you can use the same license key for all the web apps.

#### [Does the license registration access any resources or data](#)

No, the license registration doesn't access any data or resources.

License & Downloads shows the "Essential Studio Enterprise Edition Binary with Test Studio" and the "Project License". Which license to use

Use any licenses shown on the [accounts & downloads](#) page. It shows two licenses because if you are part of your company's enterprise portal Global license and an individual license is also assigned to your account, on your account & downloads page, the individual license and your enterprise portal Global license are shown.

The image displays two screenshots of the Syncfusion licensing interface. Both screenshots show the 'Essential Studio Enterprise Edition Binary with TestStudio' section. The top screenshot includes a 'Download' button and a license expiration notice: 'Your license expires on June 30, 2023.' The bottom screenshot shows the 'Project License' section with the same 'Download' button and license expiration notice. Both screenshots also include links for 'What's New', 'Release Notes', 'Get License Key', 'Get Unlock Key', and 'Code Scan Report'.

Refer to the [KB](#) article which explains the Licenses offered by Syncfusion.

If I registered the license key in both the application and the license text file  
The application registered license key is set priority and used for license validation.

Potential causes of licensing errors in applications.

Below are the possible reasons that could lead to a license error within the application:

- The application may have a license issue due to duplicate Syncfusion packages.
- An invalid license issue may occur because of Syncfusion packages being referred with multiple versions.
- Registering the license key of a different version than the referred Syncfusion package version in the application can also cause licensing errors.

#### *License issue due to duplicate Syncfusion packages in the application*

One of the possible cases on experiencing license issues in your application is due to duplicate packages exists after upgrading packages to next or latest version. To remove the duplicate packages follow the below steps.

- Delete the `@Syncfusion` folder from `node_modules` and `package-lock.json` file from app root folder.
- Clear the npm `.cache` by running the command `npm cache clean --force` or you can directly delete the file present in the application.

- It is recommended to update all Syncfusion components in the package.json file to the **same major version**. This ensures consistency and compatibility across the project. For instance, if the updated version being utilized is **v20.4.XX**, it is advised to upgrade all components to the **same version**.
- Run **npm install** Command.

#### *Invalid license issue because of Syncfusion packages referred with multiple version*

It is essential to ensure that all the components used in a project are compatible and work seamlessly together. One common issue that arises in such scenarios is **version mismatch**. Version mismatch occurs when different components have different major versions, leading to compatibility issues and difficulties in license registration.

For example, consider a situation where one component in the project has a version of **v20.1.XX**, while another component has a version of **v20.2.XX**. When such components are used together, a **version mismatch** occurs, leading to license errors. To avoid version mismatch and ensure smooth functioning of the project, it is crucial to use the **same major version** for all the Syncfusion components. This will ensure compatibility and prevent any licensing issues that may arise due to version incompatibility.

#### *Registering the license key of a different version than the referred Syncfusion package version in the application*

When developing an application with Syncfusion packages, it is important to register the appropriate license key that matches the version of the package installed. Failure to do so may result in license errors within the application.

For instance, if you are using a component version labeled as **(v20.4.XX)**, it is essential to register the license key generated **specifically** for that version. By doing so, it ensures the smooth functioning of the controls and provides access to all features and functionality without encountering any license validation errors.

## Appearance

### Theme in Vue Appearance component

The Syncfusion Vue library has provided the below list of in-built themes,

Theme	Style Sheet Name
-----	-----
Material 3	material3.css
Material 3 Dark	material3-dark.css
Bootstrap 5	bootstrap5.css
Bootstrap 5 Dark	bootstrap5-dark.css
Fluent	fluent.css
Fluent Dark	fluent-dark.css
Google's Material	material.css
Google's Material-Dark	material-dark.css
Tailwind CSS	tailwind.css

|TailwindDark CSS | tailwind-dark.css |

|Microsoft Office Fabric | fabric.css |

|Microsoft Office Fabric Dark | fabric-dark.css |

|High Contrast | highcontrast.css |

The Syncfusion Bootstrap theme is designed based on **Bootstrap v3**, however, it can be compatible with **Bootstrap v4** applications. In addition to these four built-in themes, [ThemeStudio](#) provides support for the Fusion Theme that can only be downloaded from [ThemeStudio](#).

Themes are shipped as individual and combined CSS files. Combined CSS file can be referred from the npm package `@syncfusion/ej2` and individual CSS files are available within same component repository's `style` folder. In ej2 npm packages, we have shipped both CSS and SCSS files for all components.

Referring All components CSS

`

```
@import "../nodemodules/@syncfusion/ej2/<themenam>.css";
```

`

Referring All components SCSS

```
`scss
```

```
@import "ej2/<theme_name>.scss";
```

`

[Referring individual control theme](#)

We can get the individual theme from the individual npm package or from an overall ej2 npm package.

Referring individual control from individual package

```
`scss
```

```
@import "<dependent-package>/<dependent-control>/<theme_name>.scss";
```

```
@import "ej2-buttons/styles/button/<theme_name>.scss";
```

`

**Example:**

```
`scss
```

```
@import "ej2-base/styles/material.scss";
```

```
@import "ej2-buttons/styles/button/material.scss";
```

`

`ej2-base` is common dependent package for all Syncfusion JavaScript control styles. So, it needs first to be added in the import statement.

Referring individual control from ej2 package

```
`scss
```

```
@import "ej2/<dependent-control>/<theme_name>.scss";
@import "ej2/button/<theme_name>.scss";
`
```

**Example:**

```
`scss
@import "ej2/base/material.scss";
@import "ej2/button/material.scss";
`
```

The individual control theme will not include its dependent control styles. I.e. The dependent controls theme should be added before adding the individual control themes.

*Advantages of using the individual components theme*

- Reducing the page load time of the application.
- Reducing the bundle size of the application.
- Avoids using the unused components CSS.

*Common variables*

The below list of common variables used in the Syncfusion Vue library themes for all components. You can change these variables to customize the corresponding theme.

*Syncfusion Material 3 theme*

Name	Value (Default Theme)	Value (Dark Theme)
--color-sf-black	rgb(0,0,0)	rgb(0,0,0)

### Size modes in Vue Appearance component

An application that is designed to be accessed through a web browser on various devices, including desktop computers and mobile devices, may have a distinct layout or user interface on a mobile device compared to a desktop computer to better suit the smaller screen size.

Syncfusion Vue components support both touch (bigger) and normal size modes. Touch mode creates a responsive design for mobile devices by adding the `e-bigger` class, which enhances interactions, visibility, and the overall experience.

#### Size mode for application

The user can enable touch mode (bigger) for the entire application by adding the `e-bigger` class to the `body` element in the `index.html` file as follows:

```
`  
<body className="e-bigger">  
...  
</body>  
`
```

### Size mode for a component

The user can enable touch mode (bigger) for a component by adding the `e-bigger` class to the `div` element that contains the component. Another way of enabling touch mode is by adding the `e-bigger` class using the available `cssClass` property of the component.

#### APP.VUE

```
<template>
  <div id='container' class="e-bigger">
    <ejs-button>Button</ejs-button>
  </div>
</template>
<script>
import Vue from "vue";
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
Vue.use(ButtonPlugin);
export default {
}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
</style>
```

{% previewsample "page.domainurl/code-snippet/common/size-modes-cs1" %}

### Change size mode for application at runtime

The user can change the size mode of the application between touch and normal (mouse) mode at runtime by adding and removing the `e-bigger` class. The following steps explain how to change the size mode of an application at runtime:

#### APP.VUE

```
<template>
  <div id='container'>
    <div>
      <ejs-button content="Touch Mode" v-
on:click.native='touchClick'>Button</ejs-button>
      <ejs-button content="Mouse Mode" v-
on:click.native='mouseClick'>Button</ejs-button>
    </div>
    <div class="control">
      <ejs-calendar ></ejs-calendar>
    </div>
  </div>
</template>
<script>
import Vue from "vue";
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
import { CalendarPlugin } from '@syncfusion/ej2-vue-calendars';
Vue.use(ButtonPlugin);
Vue.use(CalendarPlugin);
export default {
  methods : {
    touchClick: function(event) {
```

```

        document.body.classList.add('e-bigger');
    },
    mouseClick: function(event) {
        document.body.classList.remove('e-bigger');
    }
}
}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
@import "../node_modules/@syncfusion/ej2-vue-calendars/styles/material.css";
</style>

```

{% previewsample "page.domainurl/code-snippet/common/size-modes-cs2" %}

### Change size mode for a component at runtime

The user can change the size mode of a component between touch and normal (mouse) mode at runtime by setting the `e-bigger` CSS class.

#### APP.VUE

```

<template>
  <div id='container'>
    <div>
      <ejs-button content="Touch Mode" v-
on:click.native='touchClick'>Button</ejs-button>
      <ejs-button content="Mouse Mode" v-
on:click.native='mouseClick'>Button</ejs-button>
    </div>
    <div class="control">
      <ejs-calendar ></ejs-calendar>
    </div>
  </div>
</template>
<script>
import Vue from "vue";
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
import { CalendarPlugin } from '@syncfusion/ej2-vue-calendars';
Vue.use(ButtonPlugin);
Vue.use(CalendarPlugin);
export default {
  methods : {
    touchClick: function(event) {
      var controls = document.querySelectorAll('.control');
      for (var index = 0; index < controls.length; index++) {
        controls[index].classList.add('e-bigger');
      }
    },
    mouseClick: function(event) {
      var controls = document.querySelectorAll('.control');
      for (var index = 0; index < controls.length; index++) {
        controls[index].classList.remove('e-bigger');
      }
    }
  }
}

```

```

    }
  }
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
@import "../node_modules/@syncfusion/ej2-vue-calendars/styles/material.css";
</style>

```

{% previewsample "page.domainurl/code-snippet/common/size-modes-cs3" %}

## Icons in Vue Appearance component

Syncfusion's icon library is a collection of pre-designed icons that can be used to enhance the user interface of an application. This pre-designed icons are set of `base64` formatted font icons. Utilizing this icon library can make it simpler to create a cohesive, visually pleasing design for an application.

### Referring icons in the Vue application

Using the below approaches, the icons can be referenced in the Vue application.

- [npm package](#) - Use the npm package to access icons.
- [CDN reference](#) - Use the static web asset to access icons.

#### The npm package

All Syncfusion theme icons are shipped in the [ej2-icons](#) package, which is published on the [npmjs.com](#) public registry. This package contains both CSS and SCSS theme files for all themes.

Icons can be used from the npm package `ej2-icons`. To use the icons, install the npm package using the following command:

```
`bash
```

```
npm install @syncfusion/ej2-icons
```

```
,
```

Refer to the following syntax to use icons in a Vue application:

```
,
```

```
@import "../nodemodules/@syncfusion/ej2-icons/<themename>.css";
```

```
,
```

#### Example:

```
@import "../node_modules/@syncfusion/ej2-icons/material.css";
```

### CDN reference

All Syncfusion theme icons are available on the CDN. Instead of using a local resource on the server, use a cloud CDN to refer to the icons.

Make sure that the version of the icons in the URL matches the version of the Syncfusion Vue package. This will prevent compatibility issues and ensure that the correct version of the icons is loaded.

To use the icons from the CDN, refer to the icons by URLs in the application. This can be done by linking the icons in the HTML file by adding a link tag to the head section.

```
// Bootstrap5
<head>
<link href="https://cdn.syncfusion.com/ej2/ej2-icons/styles/bootstrap5.css" rel="stylesheet"/>
</head>

//Material
<head>
<link href="https://cdn.syncfusion.com/ej2/ej2-icons/styles/material.css" rel="stylesheet"/>
</head>
```

### Steps to use icons library

Let's create a Vue application using the following command:

For an introduction and configuration of the common specifications, see [getting started with the Syncfusion Vue application](#).

### Using icons directly in HTML element

The built-in Syncfusion icons can be rendered directly in the HTML element by defining the `e-icons` class, which contains the font-family and common properties of font icons, and defining the available icon's class with the `e-` prefix.

The following steps explain the direct rendering of the Syncfusion icon in the HTML element.

1. Add the class name `e-icons` to the HTML element that needs to render the icon.
2. Add the icon class with corresponding icon content from the [available icons](#). For example, the below code snippet represents the paste icon class.

```
.e-paste:before {
content:'\e355';
```

```
}
,
```

3. Add `e-icons` and `e-paste` classes to the HTML element.

```
,
<span class="e-icons e-paste"></span>
,
```

4. Add the CDN link reference of icons library in the `~index.html` file.

```
,
<link href="https://cdn.syncfusion.com/ej2/ej2-icons/styles/bootstrap5.css" rel="stylesheet" />
,
```

The below code snippet represents a complete example of icon usage.

#### **APP.VUE**

```
<template>
  <div class="icon-bar">
    <span class="e-icons e-cut"></span>
    <span class="e-icons e-copy"></span>
    <span class="e-icons e-paste"></span>
  </div>
</template>
<script>
  import Vue from "vue";
  export default {
  }
</script>
<style>

.icon-bar {
  width: 20%;
  background-color: lightgrey;
  overflow: auto;
  margin-top: 20px;
  margin-left: 240px;
}
.icon-bar span {
  float: left;
  width: 33%;
  text-align: center;
  padding: 12px 0;
  transition: all 0.3s ease;
}
.icon-bar span:hover {
  background-color: #e2e2e2;
}
</style>
```

```
{% previewsample "page.domainurl/code-snippet/common/animation-multiple-cs1" %}
```

### Icon size

The `ej2-icons` package offers options to display icons in different size modes. A user can use different icon sizes in their application based on touch or mouse mode. If the user is using touch mode, add `e-large` class to the element to make the icon easily interactable, or add the `e-small` or `e-medium` class in mouse mode.

The pre-defined icon size is present in the available classes listed below.

- `e-small` - Sets the icon size as 8px.
- `e-medium` - Sets the icon size to 16px.
- `e-large` - Sets the icon size to 24px.

### Example:

,

```
<span class="e-icons e-small e-search"></span>
```

```
<span class="e-icons e-medium e-search"></span>
```

```
<span class="e-icons e-large e-search"></span>
```

,

### APP.VUE

```
<template>
  <div>
    <p><b>Smaller Icons</b></p>
    <div class="small-icon-bar">
      <span class="e-icons e-small e-cut"></span>
      <span class="e-icons e-small e-copy"></span>
      <span class="e-icons e-small e-paste"></span>
    </div>
    <p><b>Medium Icons</b></p>
    <div class="medium-icon-bar">
      <span class="e-icons e-medium e-cut"></span>
      <span class="e-icons e-medium e-copy"></span>
      <span class="e-icons e-medium e-paste"></span>
    </div>
    <p><b>Larger Icons</b></p>
    <div class="large-icon-bar">
      <span class="e-icons e-large e-cut"></span>
      <span class="e-icons e-large e-copy"></span>
      <span class="e-icons e-large e-paste"></span>
    </div>
  </div>
</template>
<script>
  import Vue from "vue";
  export default {
  }
</script>
<style>
```

```

.small-icon-bar {
  width: 20%;
  background-color: lightgrey;
  overflow: auto;
}
.small-icon-bar span:hover {
  background-color: #e2e2e2;
}
.small-icon-bar span {
  float: left;
  width: 33%;
  text-align: center;
  padding: 12px 0;
  transition: all 0.3s ease;
  font-size: 36px;
}
.medium-icon-bar {
  width: 20%;
  background-color: lightgrey;
  overflow: auto;
}
.medium-icon-bar span:hover {
  background-color: #e2e2e2;
}
.medium-icon-bar span {
  float: left;
  width: 33%;
  text-align: center;
  padding: 12px 0;
  transition: all 0.3s ease;
  font-size: 36px;
}
.large-icon-bar {
  width: 20%;
  background-color: lightgrey;
  overflow: auto;
}
.large-icon-bar span:hover {
  background-color: #e2e2e2;
}
.large-icon-bar span {
  float: left;
  width: 33%;
  text-align: center;
  padding: 12px 0;
  transition: all 0.3s ease;
  font-size: 36px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/common/animation-multiple-cs2" %}

#### *Icon appearance customization*

The Syncfusion Vue icons can be customized with custom color and size by overriding the `e-icons` class. Customizing the icons in the library can be useful for making the icons more visually appealing and

fitting to the design of the application. For example, a user can change the color of an icon to match the color scheme of their application, or increase the size of an icon to make it more visible on smaller screens. It may also be useful for creating a consistent look and feel across different parts of the application. Overall, customizing the icons in the library can improve the overall user experience of the application.

### APP.VUE

```
<template>
  <div class="icon-bar">
    <span class="e-icons e-cut"></span>
    <span class="e-icons e-copy"></span>
    <span class="e-icons e-paste"></span>
  </div>
</template>
<script>
  import Vue from "vue";
  export default {
  }
</script>
<style>

.e-icons {
  color: #ffffff;
}
.icon-bar {
  width: 20%;
  background-color: #555;
  overflow: auto;
  margin-top: 20px;
  margin-left: 240px;
}
.icon-bar span {
  float: left;
  width: 33%;
  text-align: center;
  padding: 12px 0;
  transition: all 0.3s ease;
}
.icon-bar span:hover {
  background-color: #000;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/common/animation-multiple-cs3" %}

### Available icons

The complete package of Essential JS 2 icons is listed below. The corresponding icon content can be referred in the content section.

<!-- markdownlint-disable MD033 -->

style="height:1000px;width:100%;"></iframe>
```

## Theme studio in Vue Appearance component

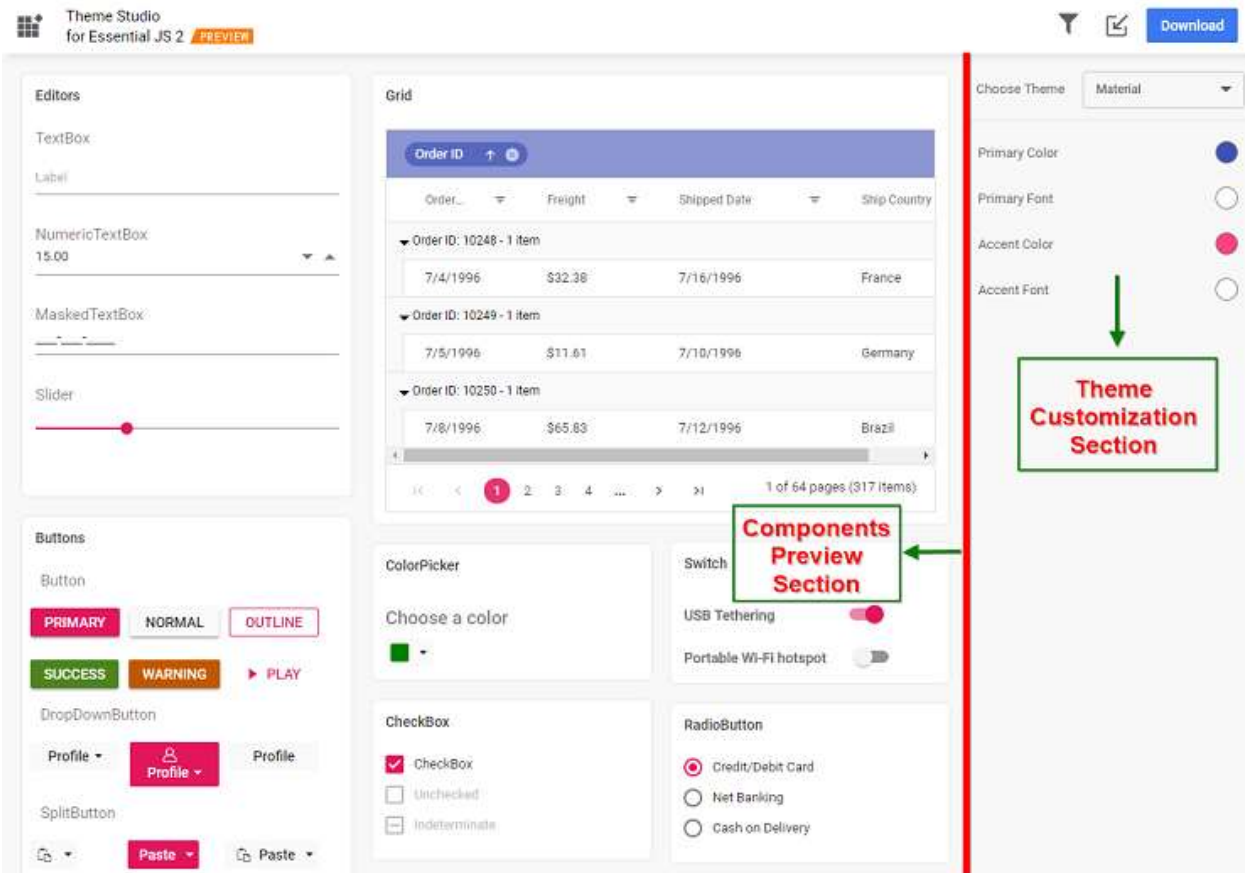

Theme Studio for Essential JS 2 can be used to customize a new theme from an existing theme. It doesn't support with Data visualization components like Chart, Diagram, Gauge, Range Navigator, Maps.

### Customizing theme color from theme studio

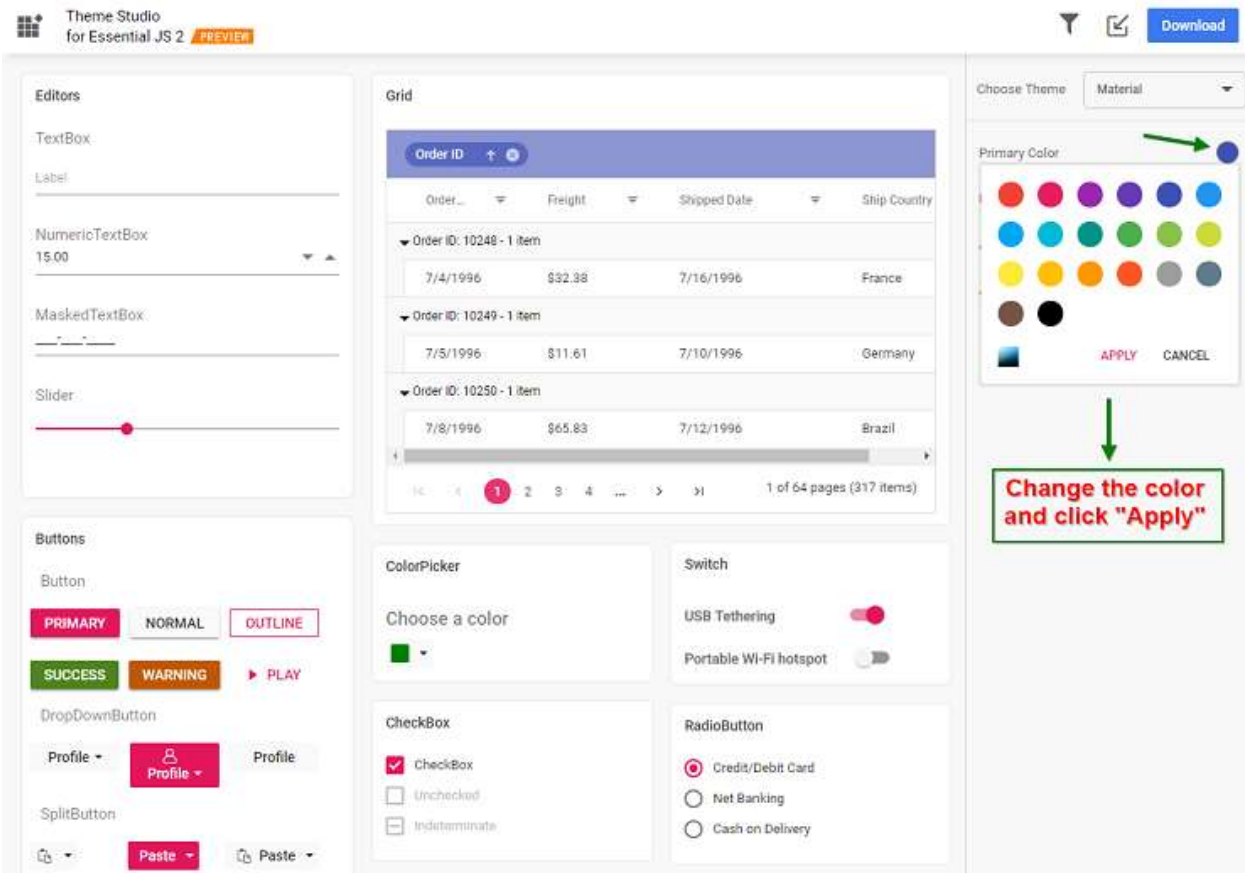

The Syncfusion Vue (Essential JS 2) themes are developed under the SCSS environment. Each theme has a unique common variable list. When you change the common variable color code value, it will reflect in all Syncfusion Vue UI components. All Syncfusion Vue component styles are derived from these [theme-based common variables](#). This common variable list is handled inside the theme studio application for customizing theme-based colors.

**Step 1:** Navigate to the theme studio application at <https://ej2.syncfusion.com/themestudio/>.

**Step 2:** The theme studio application page can be divided into two sections: the components preview section on the left, and the theme customization section on the right.

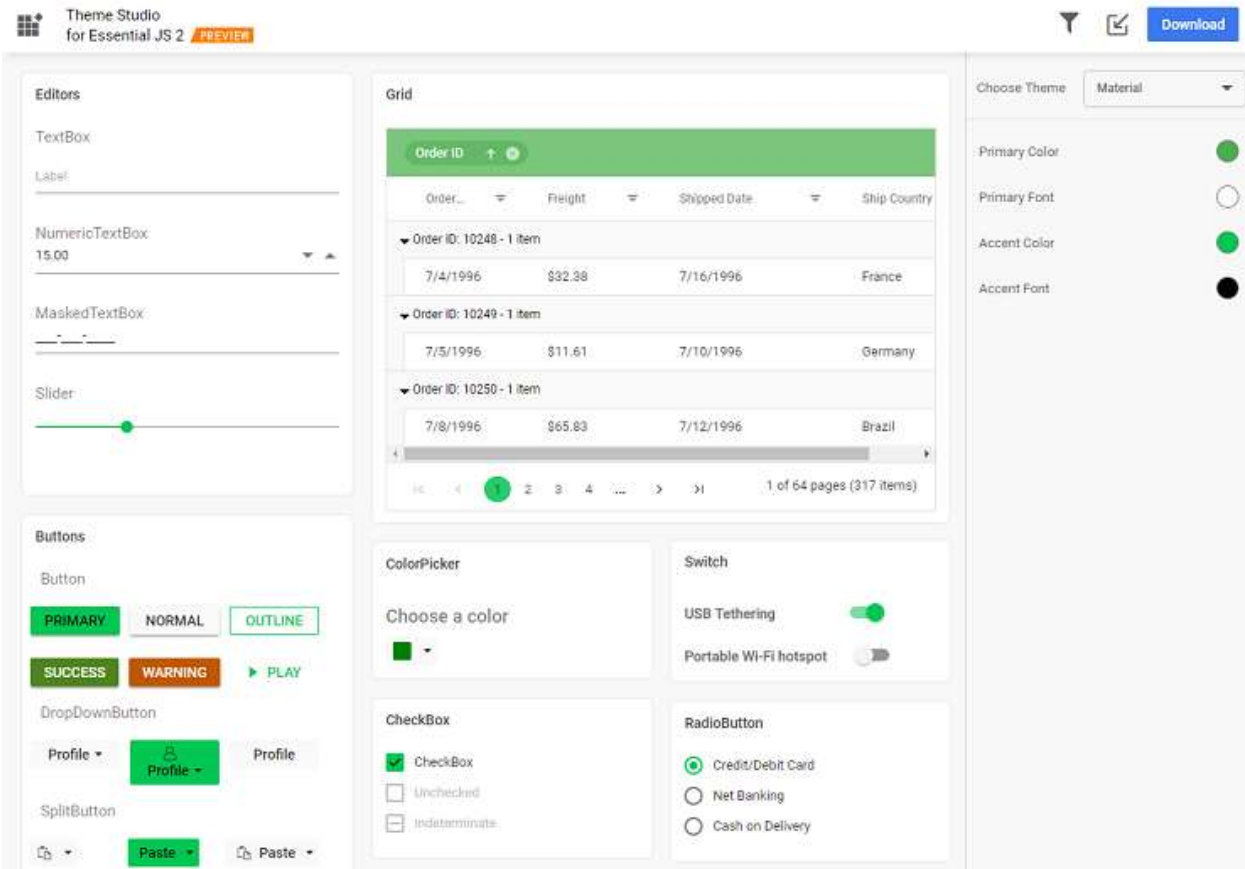

**Step 3:** Click the color pickers in the theme customization section to select your desired color.

**Step 4:** After selecting colors with the color pickers, the Syncfusion Vue components will have the newly selected colors applied to them in the components preview section.

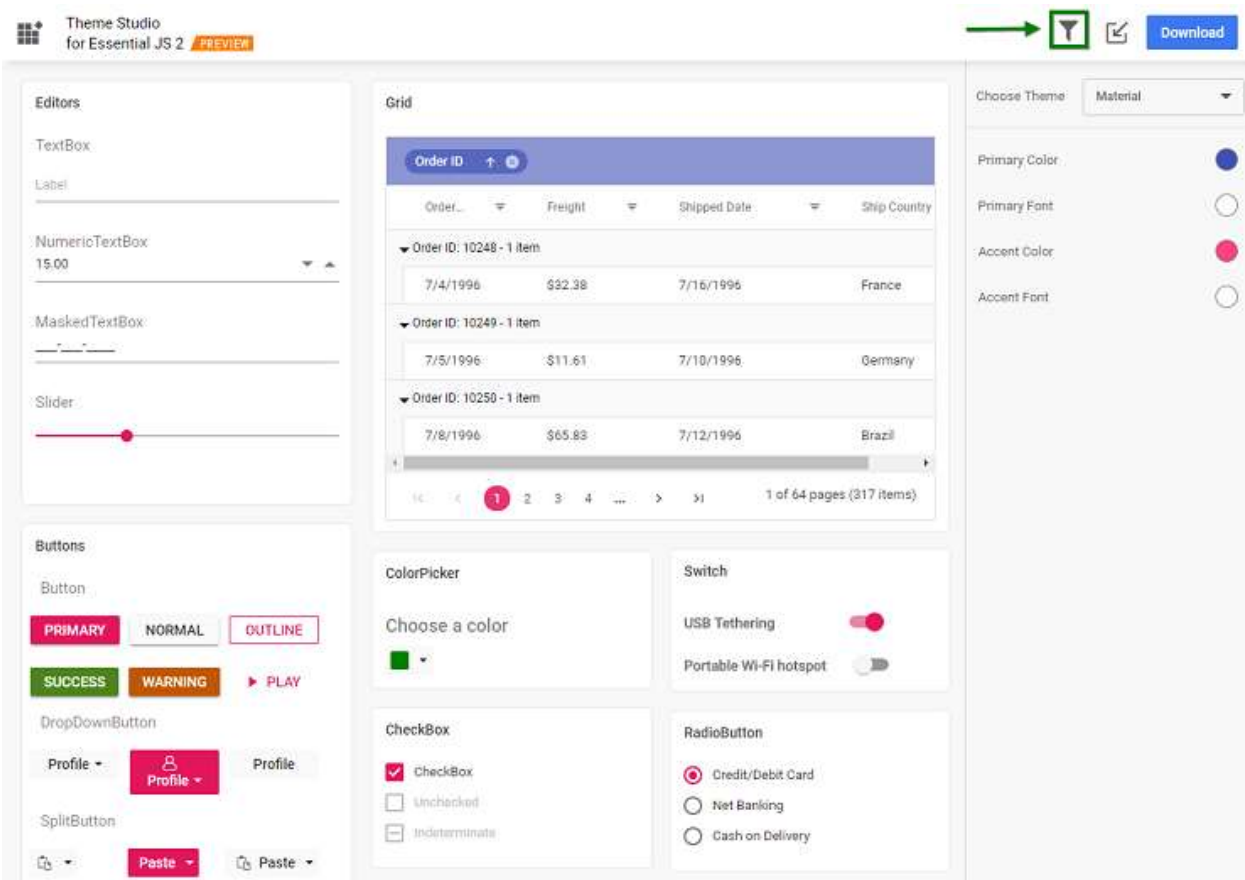

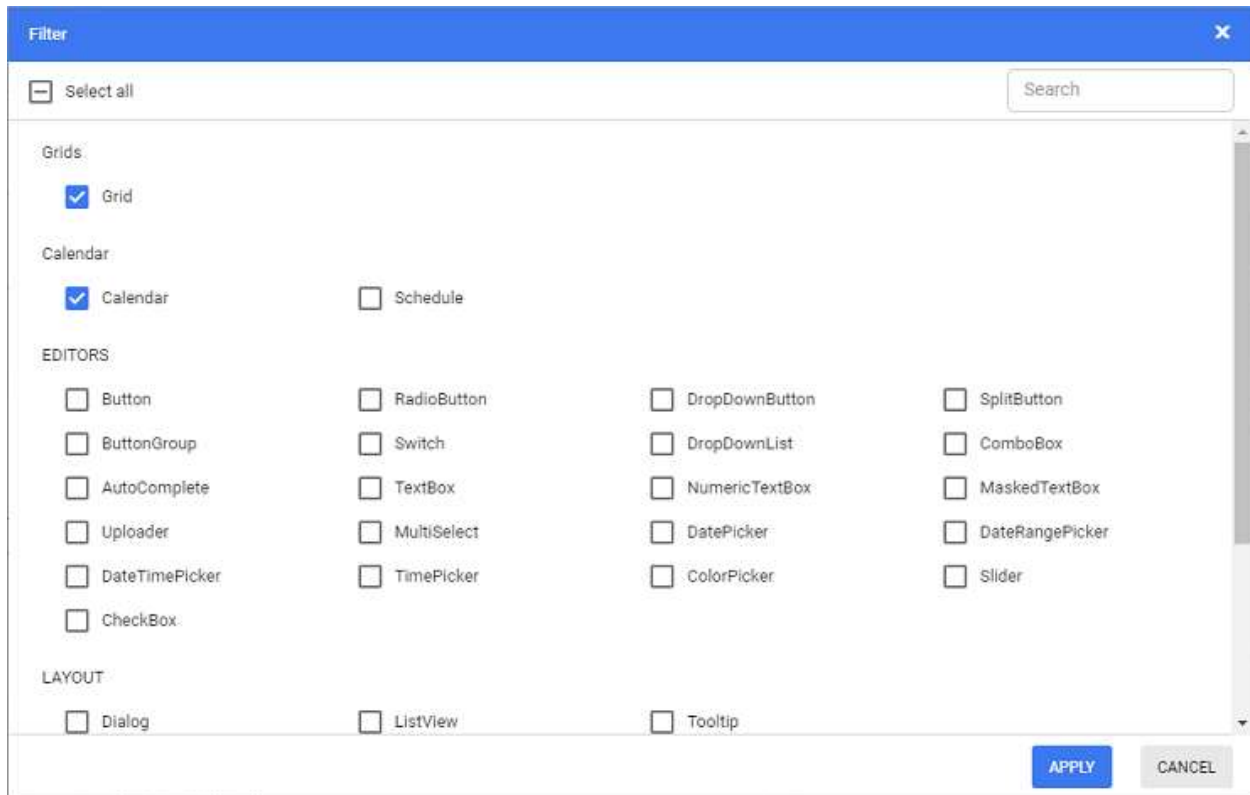

### *Filtering a specific list of components*

Using the theme studio, you can apply custom themes to a list of specific components. This option is useful when you have integrated a selective list of Syncfusion Vue components in your application. The theme studio will filter the selected components and customize the final output for those component's styles alone, reducing the final output file size.

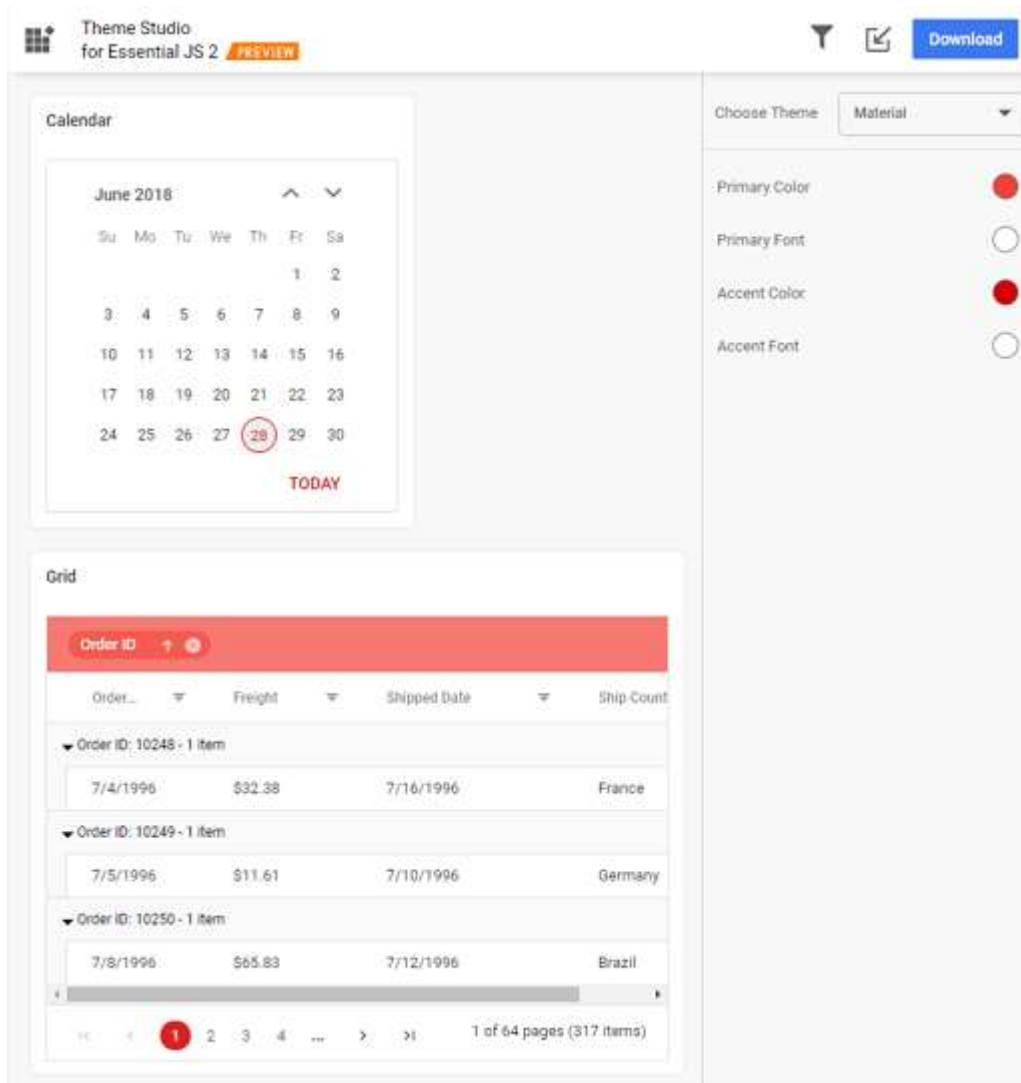

**Step 1:** Click the Filter icon in the top right corner and select the components whose theme you want to customize.

**Step 2:** Click the Apply button in the Filter dialog. Now, only the selected components will be rendered in the components preview section.

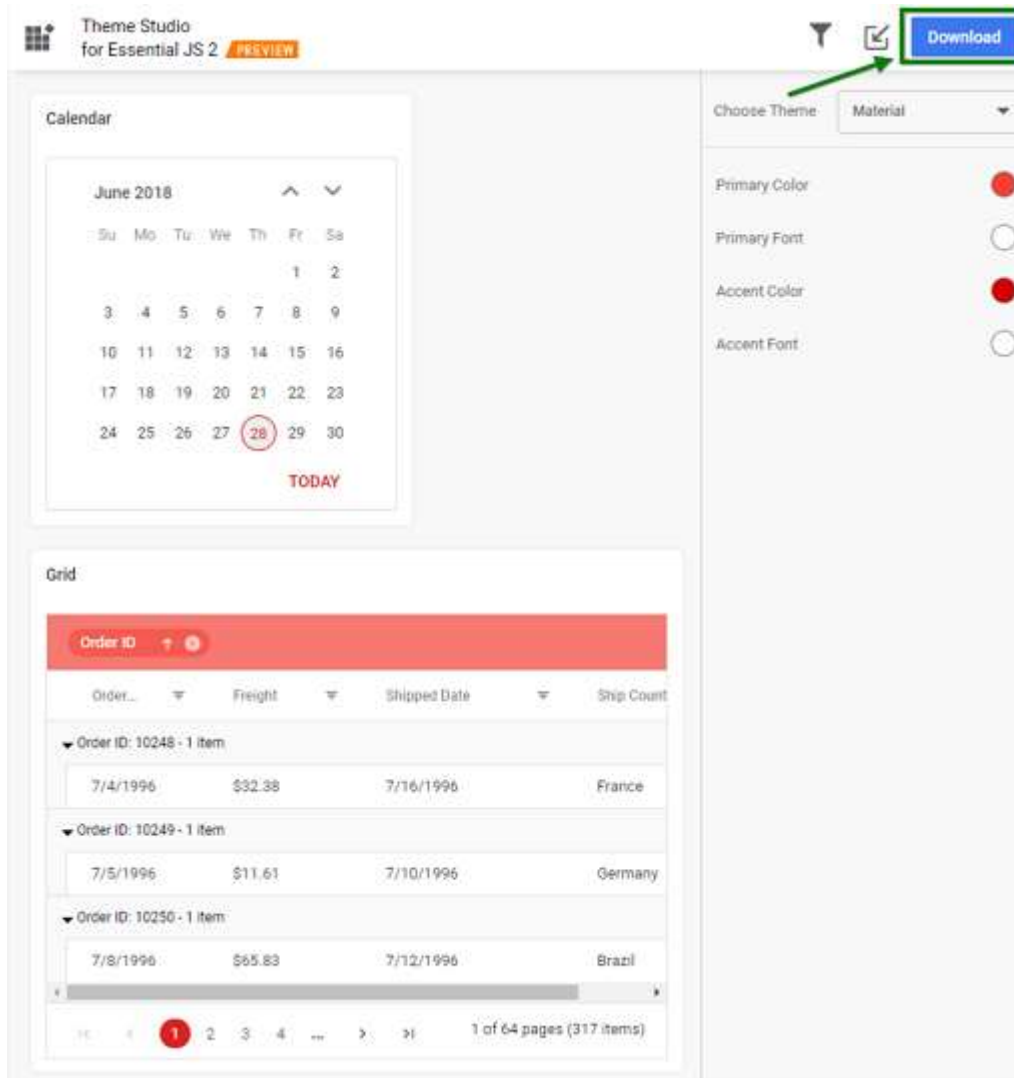

**Step 3:** Now you can customize the colors in the theme customization section for the components you selected.

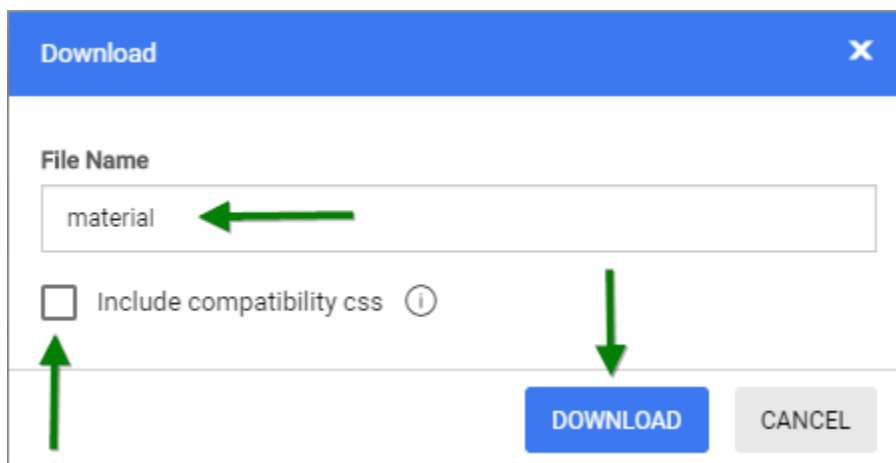

### [Download the customized theme](#)

You can download the custom styles after customizing the theme colors.

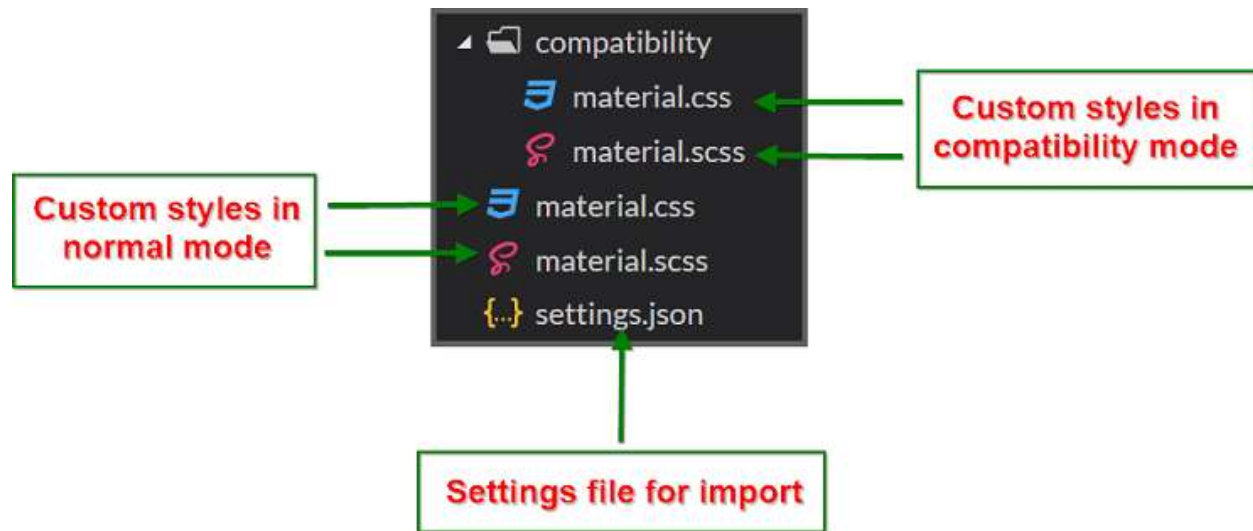

**Step 1:** Click the Download button in the top right corner. The Download dialog will open.

**Step 2:** Assign a theme name in the File Name field and click the Download button.

**Step 3:** The download styles will come as a zip file that contains SCSS and CSS files for the selected Syncfusion Vue components. The current settings are stored in the `settings.json` file.

#### Using a customized theme in a web application

You can directly use the customized CSS file in the web application.

**Step 1:** Copy/paste the customized CSS file from the download folder into your application at any folder.  
Example: `styles/{file-name}.css`.

**Step 2:** Refer the customized CSS file reference in the `index.html` or `shared/_layout.cshtml` main page head section.

,

```
<head>
```

```
<link href="styles/{file-name}.css" rel="stylesheet"/>
```

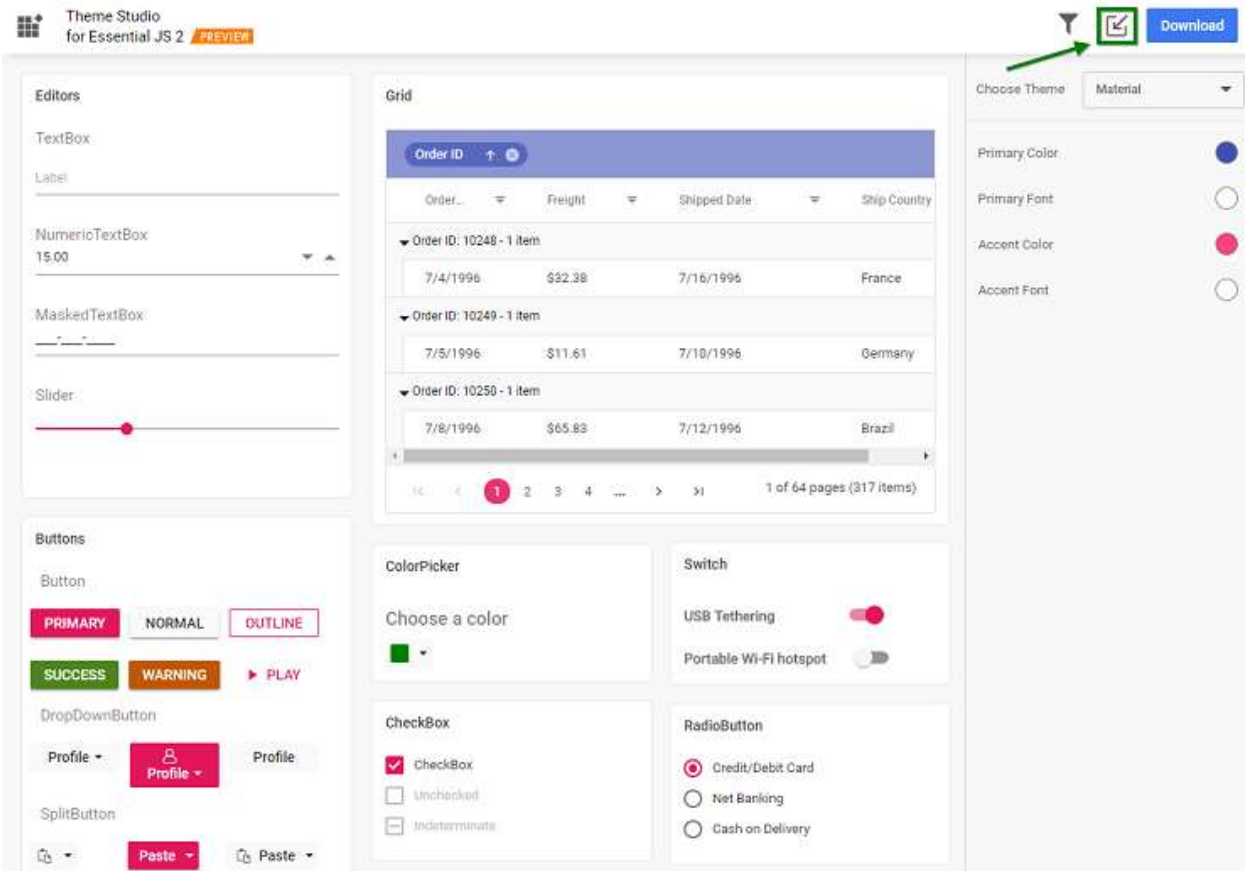

```
</head>
```

,

#### Import previously changed settings into the theme studio

When you want to change your application theme and UI design in the future, you won't need to customize the Syncfusion Vue components from scratch in the theme studio. Just import the old `settings.json` file to review and update your stored settings in the theme studio application.

**Step 1:** Click the Import icon in the top right corner.

**Step 2:** The Import Theme dialog will open. Click the Browse button and select a `settings.json` file you exported previously.

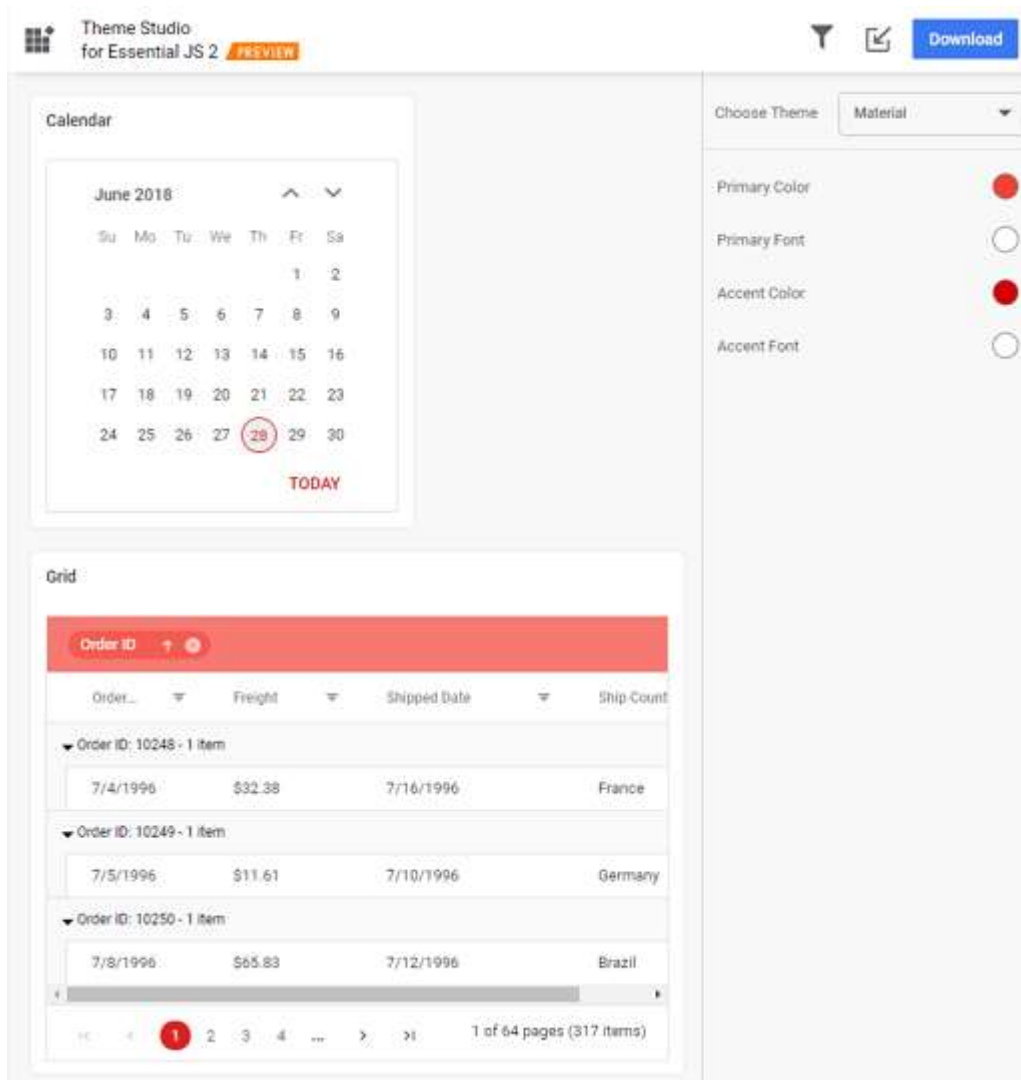

**Step 3:** Click the Import button.

**Step 4:** The stored data will be reflected in the theme studio application. Now you can change the theme colors based on your latest design and export the theme again.

**Step 5:** The exported file will contain your latest changes. You can just replace the older custom style with the newer one to refresh your application.

### Material 3 Theme

Material 3 is an updated theme that encompasses enhanced theming, components, and personalization features, including dynamic color capabilities. It has been specifically designed to align seamlessly with the new visual style and system UI introduced in Android 12 and above. For more detailed information, please refer to the following link: [Link to Material 3 Information](#).

### Syncfusion Material 3 Theme

Syncfusion has introduced the Material theme across all EJ2 Controls. The theme includes light and dark variants and utilizes CSS variables for easy customization of control colors in CSS format. This implementation enables seamless switching between light and dark color schemes, offering users a flexible solution to suit their preferences and application needs.

**Note:** Please be aware that in the Material 3 theme, we utilize CSS variables with `rgb()` values for our color variables. Using hex values in this context may lead to improper functionality. For example, in previous versions of our Material theme or other themes, the primary color variable was defined as

follows: `$primary: #6200ee;`. In the Material 3 theme, the primary color variable is defined as follows: `--color-sf-primary: 98, 0, 238;`.

### What are CSS Variables?

CSS variables, also known as custom properties, are a powerful feature in CSS that allows you to define reusable values and apply them throughout your stylesheets. Prefixed with "--", CSS variables can be utilized in any property value within a CSS rule. To retrieve the value of a CSS variable, the `var()` function is used. CSS variables can access the Document Object Model (DOM), enabling the creation of variables with either local or global scope. For further details, please consult the following link: [Link to CSS Variables Information](#).

### How does Syncfusion Theming utilize CSS Variables?

The Material 3 theme in our system incorporates CSS variable support, utilizing CSS variables with `rgb()` values for color customization.

```
`CSS
:root {
--color-sf-black: 0, 0, 0;
--color-sf-white: 255, 255, 255;
--color-sf-primary: 103, 80, 164;
--color-sf-primary-container: 234, 221, 255;
--color-sf-secondary: 98, 91, 113;
--color-sf-secondary-container: 232, 222, 248;
--color-sf-tertiary: 125, 82, 96;
--color-sf-tertiary-container: 255, 216, 228;
--color-sf-surface: 255, 255, 255;
--color-sf-surface-variant: 231, 224, 236;
--color-sf-background: var(--color-sf-surface);
--color-sf-on-primary: 255, 255, 255;
--color-sf-on-primary-container: 33, 0, 94;
--color-sf-on-secondary: 255, 255, 255;
--color-sf-on-secondary-container: 30, 25, 43;
--color-sf-on-tertiary: 255, 255, 255;
}
```

### Exploring Color Customization

Through the utilization of these CSS variables, customization of the color variables becomes remarkably straightforward. For example, to customize the primary color variable in this theme, simply modify its value in the root values.

### Default primary value

```

--color-sf-black: 0, 0, 0;
--color-sf-white: 255, 255, 255;
--color-sf-primary: 103, 80, 164;
--color-sf-primary-container: 234, 221, 255;
--color-sf-secondary: 98, 91, 113;
--color-sf-secondary-container: 232, 222, 248;
--color-sf-tertiary: 125, 82, 96;
--color-sf-tertiary-container: 255, 216, 228;
--color-sf-surface: 255, 255, 255;
--color-sf-surface-variant: 231, 224, 236;

```

### Customized primary value

```

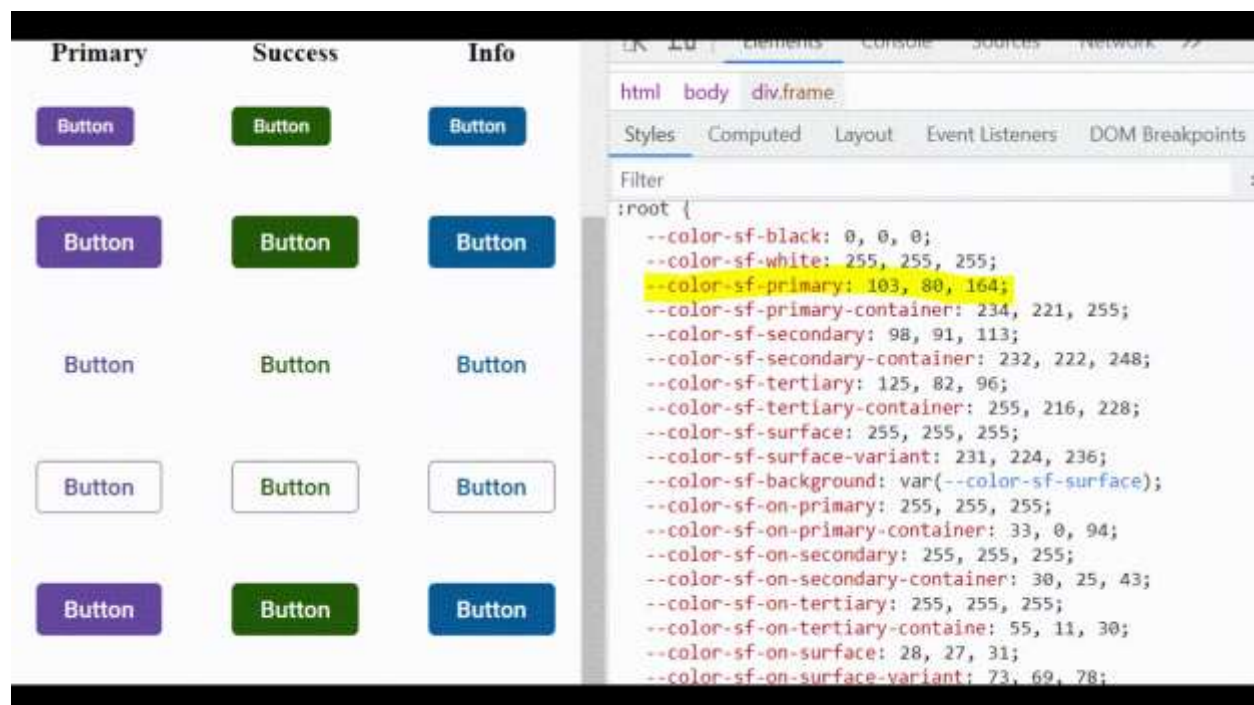

--color-sf-black: 0, 0, 0;
--color-sf-white: 255, 255, 255;
--color-sf-primary: 236, 80, 164;
--color-sf-primary-container: 234, 221, 255;
--color-sf-secondary: 98, 91, 113;
--color-sf-secondary-container: 232, 222, 248;
--color-sf-tertiary: 125, 82, 96;
--color-sf-tertiary-container: 255, 216, 228;
--color-sf-surface: 255, 255, 255;
--color-sf-surface-variant: 231, 224, 236;

```

With this CSS variable support, you can effortlessly customize the color variable values for our EJ2 controls.

### Dark mode support

The controls in our system now seamlessly transition between light and dark modes without any noticeable delay. This achievement was made by consolidating the configurations of the light theme and dark theme into [material 3 light theme](#) file.

### APP.VUE

```

<template>
<div>
  <ejs-checkbox label='Default'></ejs-checkbox>
  <ejs-button cssClass='e-primary'>Button</ejs-button>
  <ejs-button cssClass='e-success'>Button</ejs-button>
  <ejs-button cssClass='e-info'>Button</ejs-button>
  <ejs-button cssClass='e-warning'>Button</ejs-button>
  <ejs-button cssClass='e-danger'>Button</ejs-button>
</div>
</template>
<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
Vue.use(CheckBoxPlugin);
Vue.use(ButtonPlugin);
export default {}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material3.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material3.css';
.e-checkbox-wrapper {
  margin-top: 18px;
}
button {
  margin: 25px 5px 20px 20px;
}
.dark
{
  background-color:black;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/common/material3-cs1" %}

The above example demonstrates the appearance of an application in dark mode. By using CSS variable support, the transition between light and dark mode is smooth and visually pleasing.

`CSS

```

.e-dark-mode {
--color-sf-black: 0, 0, 0;
--color-sf-white: 255, 255, 255;
--color-sf-primary: 208, 188, 255;
--color-sf-primary-container: 79, 55, 139;
--color-sf-secondary: 204, 194, 220;
--color-sf-secondary-container: 74, 68, 88;
--color-sf-tertiary: 239, 184, 200;
--color-sf-tertiary-container: 99, 59, 72;

```

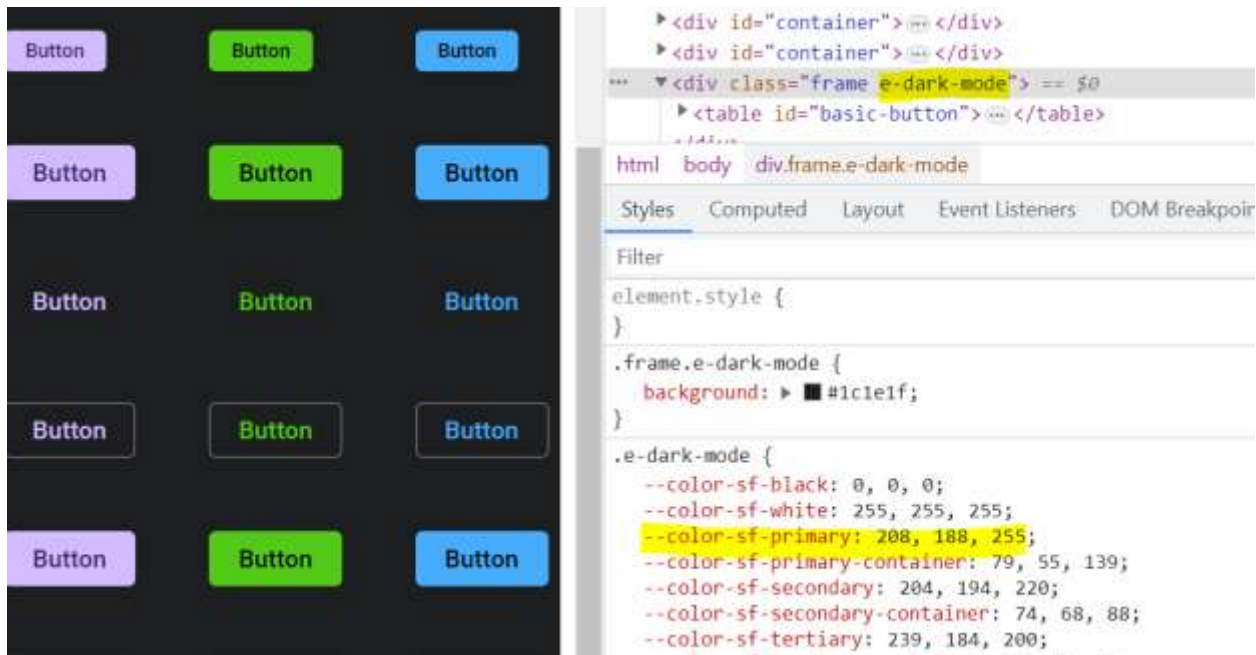

```

--color-sf-surface: 28, 27, 31;
--color-sf-surface-variant: 28, 27, 31;
--color-sf-background: var(--color-sf-surface);
--color-sf-on-primary: 55, 30, 115;
--color-sf-on-primary-container: 234, 221, 255;
--color-sf-on-secondary: 51, 45, 65;
--color-sf-on-secondary-container: 232, 222, 248;
--color-sf-on-tertiary: 73, 37, 50;
}

```

#### [How to switch to dark mode](#)

With this CSS variable support, transitioning between light and dark theme modes has become effortless. To switch to dark mode, simply add the `e-dark-mode` class to the body section of your application. Upon adding this class, the theme will seamlessly switch to dark mode. Please refer to the example image below for guidance.

#### [ThemeStudio application](#)

The ThemeStudio application now includes seamless integration with the Material 3 theme, offering a comprehensive solution for customization requirements. This enhancement enables users to effortlessly customize and personalize their themes.

Access the Syncfusion ThemeStudio application, featuring the Material 3 theme, via the following link:  
[Link to Syncfusion ThemeStudio with Material 3 Theme](#)

## Common

### Accessibility in Syncfusion Vue Components

#### Accessibility overview

Accessibility in components refers to the practice of designing and building user interface elements in a way that makes them accessible to users with disabilities. This can include a variety of things, such as making sure that text is high-contrast and easy to read, providing alternative text for images, and designing controls and interactions that can be used with a keyboard or assistive technology.

#### Accessibility standards

The component is said to be accessible when it is constructed in accordance with certain standards that are required to make it accessible.

The accessibility of the components consists of the following standards and aspects:

- [ADA](#) - A law to ensure that people with disabilities have the same opportunities and access as people without disabilities.
- [WCAG 2.2](#) - The Web Content Accessibility Guidelines (WCAG) provide guidelines developed by the World Wide Web Consortium (W3C) to ensure web content is accessible to people with disabilities. [WCAG 2.2](#) establishes a framework of accessibility principles and their associated success criteria. The level of accessibility conformance achieved by a web application is determined by the extent to which it meets these success criteria, categorized into three levels: A, AA, and AAA.
- [Section 508](#) - It is a set of guidelines for making electronic and information technology (EIT) accessible to people with disabilities. These standards apply to federal agencies in the United States, and they are based on the Web Content Accessibility Guidelines (WCAG).
- [WAI-ARIA](#) - WAI-ARIA stands for "Web Accessibility Initiative - Accessible Rich Internet Applications." It is a set of technical specifications and guidelines developed by the World Wide Web Consortium (W3C) as part of the Web Accessibility Initiative (WAI). WAI-ARIA is designed to enhance the accessibility of dynamic web content, particularly web applications and rich internet applications (RIAs), for people with disabilities. WAI-ARIA provides a set of roles, states, and properties that can be added to HTML elements to provide additional context and information about the purpose and behavior of those elements. This can help assistive technologies better understand and interpret web content and interact with web applications.
- [Keyboard navigation](#) - It refers to the ability to use a keyboard to interact with and navigate through a user interface. It is an important aspect of web accessibility, as it allows people who cannot use a mouse or other pointing device to access and use web content and applications.

Syncfusion Vue components adhere to these established standards.

#### Accessibility compliance

The accessibility support provided by Syncfusion Vue components is based on a collection of methodologies for adhering to and applying [recognized standards and technical specifications](#) to ensure an intuitive experience for people with disabilities.

There are several methodologies of accessibility validation that can be performed on the Syncfusion Vue components, such as:

- The [WAI-ARIA patterns](#) are followed by the Syncfusion Vue components to enable appreciable accessibility.

- Each Vue component is subjected to manual testing with a screen reader and also automated test cases to ensure the component's required attributes.
- Attributes are allocated and updated correctly during interaction as well. Each component has been assigned a distinct **Role** attribute and its own set of ARIA attributes defined by the [WCAG 2.2](#) specification.

In addition to the methodologies mentioned above, Syncfusion Vue components are constructed to support the following accessibility aspects.

#### *Screen reader support*

A screen reader allows people who are blind or visually impaired to use a computer by reading aloud the text that is displayed on the screen. Syncfusion Vue components followed the [WAI-ARIA](#) standards to work properly in the screen readers such as [Narrator](#) for Windows and [Embedded VoiceOver](#) for MAC.

#### *Right-To-Left support*

Right-to-Left (RTL) support allows applications to effectively communicate with users who use languages that are written from right to left, such as Arabic, Hebrew, etc. Syncfusion Vue components support the Right-to-Left feature. Refer to the [Right-to-Left documentation](#) to learn more about this support.

#### *Color contrast*

Syncfusion Vue components come equipped with [predefined themes](#) that guarantee the presence of satisfactory color contrast, benefiting individuals with visual impairments.

#### *Mobile device support*

Syncfusion Vue components are more user-friendly and accessible to individuals using mobile devices, including those with disabilities. These are designed to be responsive, adaptable to various screen sizes and orientations, and touch-friendly.

#### *Keyboard navigation support*

Syncfusion Vue components support keyboard navigation, allowing users who rely on alternate methods to effortlessly navigate and interact with the component.

#### *Ensuring accessibility*

Ensuring the accessibility of Syncfusion Vue components is crucial for making the product inclusive and user-friendly for individuals with disabilities. This process involves various types of accessibility testing, including:

- **Automated testing:** The Syncfusion Vue component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools.
- **Manual testing:** This type of testing involves manually evaluating the Syncfusion Vue components. During manual accessibility testing, testers will ensure accessibility using the screen readers such as [Narrator](#) for Windows and [Embedded VoiceOver](#) for MAC.

Syncfusion Vue components will keep improving when there is anything required. It also involves client feedback to make the component more accessible.

#### *Accessibility support for specific components*

Consult the component-specific documents below for detailed information about how Syncfusion Vue components ensure compliance with accessibility standards, encompassing Section 508, WAI-ARIA, WCAG 2.2, keyboard navigation, and more.

## Right-To-Left support in Syncfusion Vue Components

Right-to-Left (RTL) support allows applications to effectively communicate with users who use languages that are written from right to left, such as Arabic, Hebrew, etc.

Syncfusion Vue UI components support for right-to-left (RTL) by setting the `enableRtl` property to `true`. This adds the class name `e-rtl` to the component element and renders all Syncfusion Vue components in a right-to-left direction.

### Enable RTL for all components

To enable Right-To-Left (RTL) support for all components, users can set the `enableRtl` property directly in their application. Here is an example code snippet using the Grid component:

#### **APP.VUE**

```

<template>
  <div id="app">
    <ejs-grid :dataSource='data' locale='ar-AE' :allowPaging='true'
:pageSettings='pageOptions'>
      <e-columns>
        <e-column field='OrderID' headerText='Order ID'
textAlign='Right' width=120></e-column>
        <e-column field='CustomerID' headerText='Customer ID'
width=150></e-column>
        <e-column field='ShipCity' headerText='Ship City'
width=150></e-column>
        <e-column field='ShipName' headerText='Ship Name'
width=150></e-column>
      </e-columns>
    </ejs-grid>
  </div>
</template>
<script>
import Vue from "vue";
import { L10n, setCulture, enableRtl } from '@syncfusion/ej2-base';
import { GridPlugin, Page } from "@syncfusion/ej2-vue-grids";
import { data } from './datasource.js';
// Enables Right to left alignment for all components
enableRtl(true);
setCulture('ar-AE');
L10n.load({
  'ar-AE': {
    'grid': {
      'EmptyRecord': 'لا سجلات لعرضها',
      'EmptyDataSourceError': 'يجب أن يكون مصدر البيانات فارغة في  
التحميل الأولي منذ يتم إنشاء الأعمدة من مصدر البيانات في أوتوجينيراتد عمود  
الشبكة'
    },
    'pager': {
      'currentPageInfo': '{0} صفحة 1 {من}',
      'totalItemsInfo': '({0} العناصر)',
      'firstPageTooltip': 'انتقل إلى الصفحة الأولى',
      'lastPageTooltip': 'انتقل إلى الصفحة الأخيرة',
      'nextPageTooltip': 'انتقل إلى الصفحة التالية',
      'previousPageTooltip': 'انتقل إلى الصفحة السابقة',
      'nextPagerTooltip': 'الذهاب إلى بيجر المقبل',
      'previousPagerTooltip': 'الذهاب إلى بيجر السابقة'
    }
  }
});
Vue.use(GridPlugin);
export default {
  data() {
    return {
      data: data,
      pageOptions: { pageSize: 7 }
    };
  },
  provide: {
    grid: [Page]
  }
}

```

```

</script>
<style>
  @import "../node_modules/@syncfusion/ej2-vue-grids/styles/material.css";
</style>

```

{% previewsample "page.domainurl/code-snippet/common/right-to-left-cs1" %}

### Enable RTL for an individual component

To enable Right-To-Left (RTL) support for an individual component, users can set the `enableRtl` property in the component's options. Here is an example code snippet using the Grid component:

#### APP.VUE

```

<template>
  <div id="app">
    <ejs-grid :dataSource='data' locale='ar-AE' :enableRtl='true'
    :allowPaging='true' :pageSettings='pageOptions'>
      <e-columns>
        <e-column field='OrderID' headerText='Order ID'
        textAlign='Right' width=120></e-column>
        <e-column field='CustomerID' headerText='Customer ID'
        width=150></e-column>
        <e-column field='ShipCity' headerText='Ship City'
        width=150></e-column>
        <e-column field='ShipName' headerText='Ship Name'
        width=150></e-column>
      </e-columns>
    </ejs-grid>
  </div>
</template>
<script>
import Vue from "vue";
import { L10n, setCulture } from '@syncfusion/ej2-base';
import { GridPlugin, Page } from "@syncfusion/ej2-vue-grids";
import { data } from './datasource.js';
setCulture('ar-AE');
// Enables Right to left alignment for all components
L10n.load({
  'ar-AE': {
    'grid': {
      'EmptyRecord': 'لا سجلات لعرضها',
      'EmptyDataSourceError': 'يجب أن يكون مصدر البيانات فارغة في  
التحميل الأولي منذ يتم إنشاء الأعمدة من مصدر البيانات في أوتوجينيراتد عمود  
الشبكة',
    },
    'pager': {
      'currentPageInfo': '{0} صفحة 1 {من}',
      'totalItemsInfo': '({0} العناصر)',
      'firstPageTooltip': 'انتقل إلى الصفحة الأولى',
      'lastPageTooltip': 'انتقل إلى الصفحة الأخيرة',
      'nextPageTooltip': 'انتقل إلى الصفحة التالية',
      'previousPageTooltip': 'انتقل إلى الصفحة السابقة',
      'nextPagerTooltip': 'الذهاب إلى بيجر المقبل',
      'previousPagerTooltip': 'الذهاب إلى بيجر السابقة'
    }
  }
});

```

```

});
Vue.use(GridPlugin);
export default {
  data() {
    return {
      data: data,
      pageOptions: { pageSize: 7 }
    };
  },
  provide: {
    grid: [Page]
  }
}
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-vue-grids/styles/material.css";
</style>

```

{% previewsample "page.domainurl/code-snippet/common/right-to-left-cs2" %}

### State Persistence in Syncfusion Vue components

Syncfusion Vue UI components support persisting their state across page refreshes or navigation. To enable this feature, set the `enablePersistence` property to `true` for the desired component. This stores the component's state in the browser's `localStorage` object on the `unload` event of the page. For example, the `enablePersistence` property can be set for the Grid component, as shown in the following code snippet.

#### APP.VUE

```

<template>
  <div id="app">
    <ejs-grid :dataSource='data' :allowSorting='true'
      :enablePersistence='true' :allowPaging='true' :allowFiltering='true'
      height='210px'>
      <e-columns>
        <e-column field='OrderID' headerText='Order ID'
          textAlign='Right' width=120></e-column>
        <e-column field='CustomerID' headerText='Customer ID'
          width=150></e-column>
        <e-column field='ShipCity' headerText='Ship City'
          width=150></e-column>
        <e-column field='ShipName' headerText='Ship Name'
          width=150></e-column>
      </e-columns>
    </ejs-grid>
  </div>
</template>
<script>
import Vue from "vue";
import { GridPlugin, Sort, Page, Filter } from "@syncfusion/ej2-vue-grids";
import { data } from './datasource.js';
Vue.use(GridPlugin);
export default {
  data() {
    return {

```

```

        data: data
      };
    },
    provide: {
      grid: [Sort, Page, Filter]
    }
  }
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-vue-grids/styles/material.css";
</style>

```

{% previewsample "page.domainurl/code-snippet/common/right-to-left-cs3" %}

### State Persistence supported components and properties

The following table illustrates the list of Syncfusion Vue components that are supported with state persistence and the properties that are stored in the `localStorage`.

<!-- markdownlint-disable MD033 -->

component Name	Properties
Grid	<ul style="list-style-type: none"> <li>Columns</li> <li>filterSettings</li> <li>searchSettings</li> <li>groupSettings</li> <li>pageSettings</li> <li>selectedRowIndex</li> <li>scrollPosition</li> </ul>
Accordion	<ul style="list-style-type: none"> <li>expandedIndices</li> </ul>
Tabs	<ul style="list-style-type: none"> <li>selectedItem</li> </ul>
Schedule	<ul style="list-style-type: none"> <li>currentView</li> <li>selectedDate</li> <li>scrollLeft</li> <li>scrollTop</li> </ul>
Kanban	<ul style="list-style-type: none"> <li>columns</li> <li>dataSource</li> <li>swimlaneToggleArray</li> </ul>
Chart	<ul style="list-style-type: none"> <li>zoomFactor</li> <li>zoomPosition</li> </ul>
Maps	<ul style="list-style-type: none"> <li>zoomSettings</li> </ul>
Pivot Table	<ul style="list-style-type: none"> <li>dataSourceSettings</li> </ul>

	<ul style="list-style-type: none"> <li>• pivotValues</li> <li>• gridSettings</li> <li>• chartSettings</li> <li>• displayOption</li> </ul>
TreeGrid	<ul style="list-style-type: none"> <li>• columns</li> <li>• pageSettings</li> <li>• searchSettings</li> <li>• filterSettings</li> <li>• selectedRowIndex</li> <li>• sortSettings</li> </ul>
Switch, Checkbox	<ul style="list-style-type: none"> <li>• checked</li> </ul>
RadioButton	<ul style="list-style-type: none"> <li>• checked</li> <li>• value</li> </ul>
ColorPicker, ListBox, In-placeEditor, RichTextEditor, Autocomplete, Calendar, ComboBox, DatePicker, DropDownList, MaskedTextBox, NumericTextBox, Textbox, TimePicker, Multiselect, DateTimePicker, Slider, Dropdown Tree	<ul style="list-style-type: none"> <li>• value</li> </ul>
QueryBuilder	<ul style="list-style-type: none"> <li>• rule</li> </ul>
Splitter	<ul style="list-style-type: none"> <li>• paneSettings</li> </ul>
DateRangePicker	<ul style="list-style-type: none"> <li>• startDate</li> <li>• endDate</li> <li>• value</li> </ul>
Uploader	<ul style="list-style-type: none"> <li>• filesData</li> </ul>

## Event Binding

Syncfusion Vue UI components support Binding of both Custom and Native Events. For more information, refer official [Vue Documentation](#)

### Custom events

Custom events are the **Component** specific events provided by Syncfusion Vue components supported through **v-on** directive. The Syntax for Binding Custom Event is **v-on:event-name="function"**.

Refer the below code snippet for Binding of Custom Events.

,

```
// Custom Event Binding
```

```
<template>
```

```
<div id="calendar">
```

```
<ejs-calendar v-on:created="display" />
```

```
</div>
```

```
</template>
```

```

<script>
import Vue from 'vue';
import { CalendarPlugin } from '@syncfusion/ej2-vue-calendars';
Vue.use(CalendarPlugin);
export default {
  methods: {
    display: function() {
      window.alert('Calendar Created');
    }
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-vue-calendars/styles/material.css";
calendar {
  max-width: 250px;
  margin: 0 auto;
}
</style>
`

```

### Native events

Native events are the DOM events of Syncfusion Vue component's root element. `.native` modifier for `v-on` directive is used for binding these events. The Syntax for Binding Native Event is `v-on:event-name.native="function"`.

Refer the below code snippet for Binding Native Events.

```

//Native Event Binding
<template>
<div id="button">
  <ejs-button :content="name" v-on:click.native="clicked"></ejs-button>
</div>
</template>
<script>
import Vue from 'vue';

```

```

import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
Vue.use(ButtonPlugin);
export default {
  data () {
    return {
      name: "Button"
    };
  },
  methods: {
    clicked: function() {
      window.alert('Button Clicked');
    }
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-vue-buttons/styles/material.css";
</style>

```

## Model Binding

### Integrating Vue model binding in Syncfusion Vue UI components

Syncfusion Vue UI components support model binding through the `v-model` directive. The model binding support in Syncfusion Vue components uses custom 'modelchanged' event, which is used to notify Vue that a model is changed.

- Syncfusion Vue UI components that are initialized from form elements support model binding.

Refer to the following code snippet.

#### **APP.VUE**

```

<template>
  <div id="app">
    <ejs-checkbox v-model="checked" label="EJ2 Vue Checkbox"
    :checked="checked" />
    <p>
      Checkbox State: <span id="checked-state" v-text="checked" ></span>
    </p>
  </div>
</template>
<script>

```

```

import Vue from 'vue';
import { CheckBoxPlugin } from '@syncfusion/ej2-vue-buttons';
Vue.use(CheckBoxPlugin);
export default {
  data () {
    return {
      checked: true
    }
  }
}
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-vue-buttons/styles/material.css";
  #app {
    color: #008cff;
    height: 40px;
    left: 45%;
    position: absolute;
    top: 45%;
    width: 30%;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/common/model-cs1" %}

## Templates in Syncfusion Vue Components

Syncfusion Vue components are rendered with a pre-defined layout or structure that is used to define how the component should be rendered on the user interface. The user wants to customise the appearance of the component and add functionality that is specific to the needs of the application. Syncfusion Vue components have the option to achieve this using template support.

### Types of templates

Syncfusion Vue components have three types of templates, such as:

- [Slot template](#)
- [Inline template](#)
- [External template](#)

### Slot template

The Syncfusion Vue components do support [slots](#), which can help reduce the number of properties that need to be defined and increase the readability of the component. This is because using slots allows defining the content or behaviour of the component in the parent component rather than in the component's own code. This can make it easier to understand the purpose and functionality of the component at a glance and make the component more modular and flexible.

In the Vue component, the `v-slot` directive is used to define a slot template in the component's template where users can insert custom content. Refer to the following code sample.

### ~/SRC/APP.VUE

```

<ejs-grid ref="grid" :dataSource="ds">
  <e-columns>

```

```

<e-column field="OrderID" headerText="Order ID" width=120 textAlign="Right"
/>
<e-column field="CustomerName" headerText="Customer Name" width=150 />
<e-column field="ShipCountry" headerText="Ship Country" width=150
:template="'cTemplate'">
<template v-slot:cTemplate>
<ejs-button :content="ShipCountry"></ejs-button>
</template>
</e-column>
</e-columns>
</ejs-grid>

```

### Render scope

In a single-page application, there may be a need to access the parent component scope in the template. The slot content has access to the data scope of the parent component. To access the component's data source value inside the template, pass the props ({data}) to the `v-slot` directive. Expressions within the slot can access the component's data source.

```

`html
<template v-slot:templateName="{data}">
<ejs-button :content="data.ShipCountry"></ejs-button>
</template>
`

```

### Named slot

The Syncfusion Vue components support multiple templates. Each template is differentiated by its name. To render the slot content to the corresponding slot outlet, the name of each slot must map to the name of the corresponding property.

```

`html
<template v-slot:templateName></template>
`

```

When passing a slot to a component, ensure that the component's property value is of the "string" type.

An example of a Grid component sample with a named slot (cTemplate) template is shown below.

### ~/SRC/APP.VUE

```

<ejs-grid ref="grid" :dataSource="ds">
<e-columns>
<e-column field="OrderID" headerText="Order ID" width=120 textAlign="Right"
/>
<e-column field="CustomerName" headerText="Customer Name" width=150 />
<e-column field="ShipCountry" headerText="Ship Country" width=150
:template="'cTemplate'"/>
</e-columns>
<template v-slot:cTemplate="{data}">
<ejs-button :content="data.ShipCountry"></ejs-button>
</template>
</ejs-grid>

```

The slot template can also be used to insert content into nested tags within a component. In the below code example, `cTemplate` is rendered in the nested tag `<e-column>`.

#### ~/SRC/APP.VUE

```
<template>
  <div id="grid">
    <ejs-grid ref="grid" :dataSource="ds">
      <e-columns>
        <e-column field="OrderID" headerText="Order ID" width=120
textAlign="Right" />
        <e-column field="CustomerName" headerText="Customer Name" width=150
/>
        <e-column field="ShipCountry" headerText="Ship Country" width=150
:template="'cTemplate'">
          <template v-slot:cTemplate="{data}">
            <ejs-button :content="data.ShipCountry"></ejs-button>
          </template>
        </e-column>
      </e-columns>
    </ejs-grid>
  </div>
</template>
<script>
  import Vue from 'vue';
  import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
  import { GridPlugin } from '@syncfusion/ej2-vue-grids';
  Vue.use(GridPlugin);
  Vue.use(ButtonPlugin);
  var empData = [
    { OrderID: 10248, ShipCountry: "France", CustomerName: "Paul Henriot" },
    { OrderID: 10249, ShipCountry: "Germany", CustomerName: "Karin Josephs"
  },
    { OrderID: 10250, ShipCountry: "Brazil", CustomerName: "Mario Pontes" },
    { OrderID: 10251, ShipCountry: "France", CustomerName: "Mary Saveley" }
  ];
  export default {
    data () { return { ds: empData } }
  }
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-calendars/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-dropdowns/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-
splitbuttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-vue-grids/styles/material.css";
</style>
```

{% previewsample "page.domainurl/code-snippet/common/slot-cs1" %}

### Inline template

The user can use the `Vue.component` method to add custom content to the template that can be used in the Syncfusion Vue components. The template elements can be added to `template` attribute of the `Vue.component` method. Refer to the below code snippet to create the template element using `Vue.component` method.

```
`js
var inlineTemplate = Vue.component("inlineTemplate", {
  template: '<ejs-button :content="$${data.ShipCountry}"></ejs-button>',
  data() { return { data: {} }; }
});
`
```

Create a template function that returns an object { key: 'template', value: 'importedTemplate' } to map this template to the Grid component.

```
`js
cTemplate: function() {
  return { template: inlineTemplate };
}
`
```

Now, the template function is assigned to the `template` property of the Grid component. Refer to the below example for the inline template.

### ~/SRC/APP.VUE

```
<template>
  <div id="grid">
    <ejs-grid ref="grid" :dataSource="ds">
      <e-columns>
        <e-column field="OrderID" headerText="Order ID" width=120
textAlign="Right" />
        <e-column field="CustomerName" headerText="Customer Name" width=150
/>
        <e-column field="ShipCountry" headerText="Ship Country" width=150
:template='cTemplate' />
      </e-columns>
    </ejs-grid>
  </div>
</template>
<script>
  import Vue from 'vue';
  import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
  import { GridPlugin } from "@syncfusion/ej2-vue-grids";
  Vue.use(GridPlugin);
  Vue.use(ButtonPlugin);
  var inlineTemplate = Vue.component("inlineTemplate", {
    template: '<ejs-button :content="$${data.ShipCountry}"></ejs-button>',
    data() { return { data: {} }; }
  });
</script>
```

```

    });
    var empData = [
      { OrderID: 10248, ShipCountry: "France", CustomerName: "Paul Henriot" },
      { OrderID: 10249, ShipCountry: "Germany", CustomerName: "Karin Josephs"
    },
      { OrderID: 10250, ShipCountry: "Brazil", CustomerName: "Mario Pontes" },
      { OrderID: 10251, ShipCountry: "France", CustomerName: "Mary Saveley" }
    ];
    export default {
      data () {
        return {
          ds: empData,
          cTemplate: function () {
            return { template: inlineTemplate };
          }
        }
      }
    }
  }
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-calendars/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-dropdowns/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-vue-grids/styles/material.css";
</style>

```

{% previewsample "page.domainurl/code-snippet/common/template-cs1" %}

### External template

The template elements can be defined in an external file (single-file component) and used in Syncfusion Vue components. Refer to the below code snippet to define template elements in `template.vue` file.

### ~/SRC/TEMPLATE.VUE

```

<template>
  <div class="button">
    <ejs-button :content="'${data.ShipCountry}'"> </ejs-button>
  </div>
</template>
<script>
import Vue from "vue";
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
Vue.use(ButtonPlugin);
export default {
  data () { return { data: {} } }
}
</script>

```

Import the `template.vue` file into the corresponding `App.vue` file as specified in the following code snippet.

```
`js
import externalTemplate from './template.vue'
`
```

Create a template function that returns an object { key: 'template', value: 'importedTemplate' } to map this template to the Grid component.

```
`js
cTemplate: function() {
return { template: externalTemplate };
}
`
```

Now, the template function is assigned to the `template` property of the Grid component. Refer to the below code snippet from `App.vue` file for the external template.

#### ~/SRC/APP.VUE

```
<template>
<div id="app">
<ejs-grid ref="grid" :dataSource="ds">
<e-columns>
<e-column headerText='Ship Country' width='150' textAlign='Center'
:template='cTemplate' />
<e-column field="OrderID" headerText="Order ID" width=120 textAlign="Right"
/>
<e-column field="CustomerName" headerText="Customer Name" width=150 />
</e-columns>
</ejs-grid>
</div>
</template>
<script>
import Vue from "vue";
import { GridPlugin } from "@syncfusion/ej2-vue-grids";
import externalTemplate from "./template.vue";
Vue.use(GridPlugin);
var empData = [
{ OrderID: 10248, ShipCountry: "France", CustomerName: "Paul Henriot" },
{ OrderID: 10249, ShipCountry: "Germany", CustomerName: "Karin Josephs" },
{ OrderID: 10250, ShipCountry: "Brazil", CustomerName: "Mario Pontes" },
{ OrderID: 10251, ShipCountry: "France", CustomerName: "Mary Saveley" }
];
export default {
name: 'App',
data() {
return {
ds: empData,
cTemplate: function() {
return { template: externalTemplate };
}
}
}
```

```

};
}
};
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-calendars/styles/material.css";
@import "../node_modules/@syncfusion/ej2-dropdowns/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
@import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
@import "../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-grids/styles/material.css";
</style>

```

### External modules in templates

Syncfusion provides the option to use external modules in template content. To use the external modules in the template, add those modules to the `plugins` property of the Vue component. For example, the "i18n" module is added to the `plugins` property of the Grid component. Refer to the below code snippet.

#### ~/SRC/APP.VUE

```

<template>
<h3>Grid component</h3>
<ejs-grid height='210px' :plugins="modules"></ejs-grid>
</template>
<script>
import { GridPlugin } from "@syncfusion/ej2-vue-grids";
export default {
  components: {
    "ejs-grid": GridComponent,
  },
  data() {
    return { modules: [i18n] };
  }
};
</script>

```

Below is the example code to define `i18n` external module in the Vue 3 application.

#### ~/MAIN.JS

```

import { createApp } from 'vue'
import App from './App.vue'
import { createI18n } from "vue-i18n";
const messages = {
  en: {
    message: {
      customer: "Customer Name",
    },
  },
  ja: {
    message: {

```

```

customer: "顧客名",
},
},
};
export const i18n = createI18n({
  legacy: false,
  locale: "ja",
  fallbackLocale: "en",
  messages,
});
createApp(App).use(i18n).mount('#app')

```

Below is the example code to use `i18n` external module in the Grid component template using `plugins` property.

### ~/SRC/APP.VUE

```

{% raw %}
<template>
<ejs-grid ref="grid" :dataSource="ds" :plugins="modules">
<e-columns>
<e-column field="OrderID" headerText="Order ID" width=120 textAlign="Right"
/>
<e-column headerText='Customer Name' width=150 :template="'cTemplate'">
<template v-slot:cTemplate={data}>
<div>{{ $t("message.customer") }} - {{data.CustomerName}}</div>
</template>
</e-column>
</e-columns>
</ejs-grid>
</template>
<script>
import { i18n } from "./main";
import { GridComponent, ColumnsDirective, ColumnDirective } from
"@syncfusion/ej2-vue-grids";
var empData = [
{ OrderID: 10248, ShipCountry: "France", CustomerName: "Paul Henriot" },
{ OrderID: 10249, ShipCountry: "Germany", CustomerName: "Karin Josephs" },
{ OrderID: 10250, ShipCountry: "Brazil", CustomerName: "Mario Pontes" },
{ OrderID: 10251, ShipCountry: "France", CustomerName: "Mary Saveley" }
];
export default {
  name: "App",
  components: {
    "ejs-grid": GridComponent,
    "e-columns": ColumnsDirective,
    "e-column": ColumnDirective,
  },
  data() {
    return {
      modules: [i18n],
      ds: empData,
    };
  },
};
</script>

```

```

<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-calendars/styles/material.css";
@import "../node_modules/@syncfusion/ej2-dropdowns/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
@import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
@import "../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-grids/styles/material.css";
</style>
{% endraw %}

```

### Provide/Inject in templates

In Vue, **provide** and **inject** options are used to share data between components that are not directly related through a parent-child relationship.

Syncfusion components can use these **provide** and **inject** options in templates. It allows to pass data from a parent component to its template components without having to pass props down the component tree. Instead, the parent component provides the data, and the child components inject it.

To provide data from a parent component to its template, use the **provide** option. The provide option is an object that contains the data to provide. The keys in the object are the names of the properties, and the values are the data to provide.

In this below example, the parent component provides the content property with the value of **Update** in **App.vue** file.

#### ~/SRC/APP.VUE

```

<template>
<div id="grid">
<ejs-grid ref="grid" :dataSource="ds">
<e-columns>
<e-column field="OrderID" headerText="Order ID" width=120 textAlign="Right"
/>
<e-column field="CustomerName" headerText="Customer Name" width=150 />
<e-column field="ShipCountry" headerText="Ship Country" width=150
:template="'cTemplate'">
<template v-slot:cTemplate={data}>
<div>{{data.ShipCountry}} <MyTemplate /></div>
</template>
</e-column>
</e-columns>
</ejs-grid>
</div>
</template>
<script>
import Vue from 'vue';
import { GridPlugin } from "@syncfusion/ej2-vue-grids";
import MyTemplate from "./MyTemplate.vue";
Vue.use(GridPlugin);
var empData = [
{ OrderID: 10248, ShipCountry: "France", CustomerName: "Paul Henriot" },
{ OrderID: 10249, ShipCountry: "Germany", CustomerName: "Karin Josephs" },

```

```

{ OrderID: 10250, ShipCountry: "Brazil", CustomerName: "Mario Pontes" },
{ OrderID: 10251, ShipCountry: "France", CustomerName: "Mary Saveley" }
];
export default {
  components: {
    MyTemplate
  },
  data () {
    return {
      ds: empData
    }
  },
  provide: { content: 'Update' }
}
</script>

```

To inject data provided by a parent component, use the `inject` option. The `inject` option is an array or an object that contains the names of the properties to inject.

In this below example, the child template component injects content property using the `inject` option, and displays its value using an interpolation directive (`{{ raw }}{{ content }}{% endraw %}`) in **MyTemplate.vue** file.

#### ~/SRC/MYTEMPLATE.VUE

```

{% raw %}
<template>
<ejs-button>{{ content }}</ejs-button>
</template>
<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
Vue.use(ButtonPlugin);
export default {
  name: 'MyTemplate',
  data () {
    return {}
  },
  inject: ['content']
}
</script>
{% endraw %}

```

## Animation in Vue

The **Animation** is used to perform animation effects on HTML elements by running a sequence of frames. It can be used to enhance the user experience.

Syncfusion [Animation](#) library supports animating the HTML elements using the [animate](#) method. This method adds the `e-animate`, `e-animation-id` attributes, and CSS style to the HTML element and removes them after the animation effect is completed.

### Animation effects

An animation effect refers to the visual change that occurs over a period of time in HTML elements. The [Animation](#) library supports different types of animation [effects](#). The [name](#) property is used to specify the animation effect of an animation.

Here is an example code snippet using the `FadeOut` and `ZoomOut` animation effects:

#### APP.VUE

```
<template>
  <div id='container'>
    <div id='element1'></div>
    <div id='element2'></div>
  </div>
</template>
<script>
  import { Animation } from '@syncfusion/ej2-base';
  import Vue from "vue";
  export default {
    mounted: function () {
      var animation = new Animation();
      animation.animate('#element1', { name: 'FadeOut' });
      animation.animate('#element2', { name: 'ZoomOut' });
    }
  }
</script>
<style>

#element1, #element2 {
  background: #333333;
  border: 1px solid #cecece;
  box-sizing: border-box;
  float: left;
  height: 100px;
  width: 100px;
}
#element2 {
  margin-left: 20px;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/common/animation-multiple-cs4" %}

### Animation duration

Animation [duration](#) is the animation property that specifies the length of time that an animation should take to complete. The animation duration is specified in milliseconds (ms) and determines the total amount of time that an animation should run.

For example, if an animation has a duration of 2 seconds, it will take 2 seconds to complete from start to finish. The duration of an animation affects the overall pace of the animation and can be adjusted to match the desired speed and style of the animation.

The value of the animation duration can be adjusted to change the speed of the animation, with shorter durations resulting in faster animations and longer durations resulting in slower animations.

Here is an example code snippet using the animation effects with a duration of `5000` milliseconds:

**APP.VUE**

```

<template>
  <div id='container'>
    <div id='element1'></div>
    <div id='element2'></div>
  </div>
</template>
<script>
  import { Animation } from '@syncfusion/ej2-base';
  import Vue from "vue";
  export default {
    mounted: function () {
      var animation = new Animation({ duration: 5000 });
      animation.animate('#element1', { name: 'FadeOut' });
      animation.animate('#element2', { name: 'ZoomOut' });
    }
  }
</script>
<style>

#element1, #element2 {
  background: #333333;
  border: 1px solid #cecece;
  box-sizing: border-box;
  float: left;
  height: 100px;
  width: 100px;
}
#element2 {
  margin-left: 20px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/common/animation-multiple1-cs1" %}

**Animation delay**

The animation [delay](#) is the animation property that specifies the amount of time to wait before starting an animation. The animation delay is specified in milliseconds (ms) and determines the amount of time that should elapse before an animation begins.

For example, if an animation has a delay of 2 seconds, it will wait for 2 seconds before starting. This can be useful in creating more complex animations, where multiple elements are animated in sequence, or in creating animations that start only after a user interaction has taken place.

Here is an example code snippet using the animation effects with a delay of 2000 milliseconds:

**APP.VUE**

```

<template>
  <div id='container'>
    <div id='element1'></div>
    <div id='element2'></div>
  </div>
</template>
<script>

```

```

import { Animation } from '@syncfusion/ej2-base';
import Vue from "vue";
export default {
  mounted: function () {
    var animation = new Animation({ delay: 2000, duration: 5000 });
    animation.animate('#element1', { name: 'FadeOut' });
    animation.animate('#element2', { name: 'ZoomOut' });
  }
}
</script>
<style>

#element1, #element2 {
  background: #333333;
  border: 1px solid #cecece;
  box-sizing: border-box;
  float: left;
  height: 100px;
  width: 100px;
}
#element2 {
  margin-left: 20px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/common/animation-multiple2-cs1" %}

### Enable or disable animation globally

Enable or disable animation for all Vue components globally by using the `setGlobalAnimation` method with one of the below options:

- `GlobalAnimationMode.Enable` - Enables the animation for all components, regardless of the individual component's animation settings.
- `GlobalAnimationMode.Disable` - Disables the animation for all components, regardless of the individual component's animation settings.
- `GlobalAnimationMode.Default` - Animation is enabled or disabled based on the component's animation settings.

In the below code snippet, animation is disabled.

### ~/SRC/MAIN.JS

```

import { GlobalAnimationMode, setGlobalAnimation } from "@syncfusion/ej2-base";
setGlobalAnimation(GlobalAnimationMode.Disable);

```

`setGlobalAnimation` method controls script-level animations only, and it is not applicable for direct CSS-level animations (animations defined from CSS classes or properties).

### Getting started with Localization

Localization library allows you to localize the text content of the Syncfusion React UI Components. This is useful if you want to display the UI in a language other than English.

### Loading translations

To load a translation object in your application, you can use the load function from the @syncfusion/ej2-base module. This function takes an object that contains the translations for various languages, with the keys being the language codes and the values being the translation objects.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-grid :dataSource='data' locale='de-DE' :allowGrouping='true'
:allowPaging='true' :pageSettings='pageOptions' height='220px'>
      <e-columns>
        <e-column field='OrderID' headerText='Order ID'
textAlign='Right' width=120></e-column>
        <e-column field='CustomerID' headerText='Customer ID'
width=150></e-column>
        <e-column field='ShipCity' headerText='Ship City'
width=150></e-column>
        <e-column field='ShipName' headerText='Ship Name'
width=150></e-column>
      </e-columns>
    </ejs-grid>
  </div>
</template>
<script>
import Vue from "vue";
import { L10n, setCulture } from '@syncfusion/ej2-base';
import { GridPlugin, Page, Group } from "@syncfusion/ej2-vue-grids";
import { data } from './datasource.js';
setCulture('de-DE');
L10n.load({
  'de-DE': {
    'grid': {
      'EmptyRecord': 'Keine Aufzeichnungen angezeigt',
      'GroupDropArea': 'Ziehen Sie einen Spaltenkopf hier, um die
Gruppe ihre Spalte',
      'UnGroup': 'Klicken Sie hier, um die Gruppierung aufheben',
      'EmptyDataSourceError': 'DataSource darf bei der Erstaustellung
nicht leer sein, da Spalten aus der dataSource im AutoGenerate
Spaltenraster',
      'Item': 'Artikel',
      'Items': 'Artikel'
    },
    'pager': {
      'currentPageInfo': '{0} von {1} Seiten',
      'totalItemsInfo': '({0} Beiträge)',
      'firstPageTooltip': 'Zur ersten Seite',
      'lastPageTooltip': 'Zur letzten Seite',
      'nextPageTooltip': 'Zur nächsten Seite',
      'previousPageTooltip': 'Zurück zur letzten Seit',
      'nextPagerTooltip': 'Zum nächsten Pager',
      'previousPagerTooltip': 'Zum vorherigen Pager'
    }
  }
});
Vue.use(GridPlugin);
export default {
```

```

data() {
  return {
    data: data,
    pageOptions: { pageSize: 7 }
  };
},
provide: {
  grid: [Page, Group]
}
}
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-vue-grids/styles/material.css";
</style>

```

{% previewsample "page.domainurl/code-snippet/common/intl-cs1" %}

### Changing current locale

The current locale can be changed for all the Syncfusion React UI Components in your application by invoking `setCulture` function with your desired culture name.

`ts

```
import {L10n, setCulture} from '@syncfusion/ej2-base';
```

```
L10n.load({
```

```
'fr-BE': {
```

```
'Button': {
```

```
'id': 'Numéro de commande',
```

```
'date': 'Date de commande'
```

```
}
```

```
}
```

```
});
```

```
setCulture('fr-BE');
```

```
`
```

Note: Before changing a culture globally, you need to ensure that locale text for the concerned culture is loaded through `L10n.load` function.

### Internationalization

The `Internationalization` library provides support for formatting and parsing date and number objects using the official [Unicode CLDR](#) JSON data. The `en-US` locale is set as default *culture* and `USD` is set as default *currencyCode* for all Syncfusion Vue UI Components.

### Loading culture data

It requires the following CLDR data to be load using `loadCldr` function for cultures other than `en-US`.

| File Name | Path |

```
| ----- | ----- |
| ca-gregorian | cldr/main/en/ca-gregorian.json |
| timeZoneNames | cldr/main/en/timeZoneNames.json |
| numbers | cldr/main/en/numbers.json |
| numberingSystems | cldr/supplemental/numberingSystems.json |
| currencies | cldr/main/en/currencies.json |
```

Note: For `en`, dependency files are already loaded in the library.

#### Installing CLDR data

CLDR data is available as npm package. So, we can install it through below command to our package.

```
`bash
npm install cldr-data
```

```
,
```

#### Binding to i18n library

```
`ts
import { loadCldr } from '@syncfusion/ej2-base';
loadCldr(enNumberData, entimeZoneData);
```

```
,
```

#### Changing Global Culture and Currency Code

To set the default culture and the currency code for all Syncfusion Vue UI Components, you can use the methods `setCulture` for setting the default locale and `setCurrencyCode` for setting the currency code.

```
`ts
import { setCulture, setCurrencyCode } from '@syncfusion/ej2-base';
setCulture('ar');
setCurrencyCode('QAR');
```

```
,
```

Note: If global culture is not set, then `en-US` is set as the default locale, and `USD` is set as the default currency code.

#### Manipulating numbers

```
<!-- markdownlint-disable MD024 -->
```

#### Supported format string

```
<!-- markdownlint-disable MD024 -->
```

Based on the [NumberFormatOptions](#) number formatting and parsing operations are processed. You need to specify some or all of the following properties mentioned below table.

No	Properties	Description
---	---	---

| 1 | **format** | Denotes the format to be set .Possible values are <br /> 1. **N** - denotes numeric type. <br /> 2. **C** - denotes currency type. <br /> 3. **P** - denotes percentage type. <br /> E.g: <br /> `formatNumber( 1234344 ,{format:'N4'})`. <br /> <br /> Note: If no format is specified it takes numeric as default format type. |

| 2 | **minimumFractionDigits** | Indicates the minimum number of fraction digits . Possible values are 0 to 20. |

| 3 | **maximumFractionDigits** | Indicates the maximum number of fraction digits. Possible values are 0 to 20. |

| 4 | **minimumSignificantDigits** | Indicates the minimum number of significant digits. Possible values are 1 to 21. <br /> Note: If **minimumSignificantDigits** is given it is mandatory to give **maximumSignificantDigits** |

| 5 | **maximumSignificantDigits** | Indicates the maximum number of significant digits. . Possible values are 1 to 21. <br /> **Note:** If **maximumSignificantDigits** is given it is mandatory to give **minimumSignificantDigits** |

| 6 | **useGrouping** | Indicates whether to enable the group separator or not . By default grouping value will be true. |

| 7 | **minimumIntegerDigits** | Indicates the minimum number of the integer digits to be placed in the value. Possible values are 1 to 21. |

| 8 | **currency** | Indicates the currency code which needs to be considered for the currency formatting. |

Note: The **minimumIntegerDigits**, **minimumFractionDigits** and **maximumFractionDigits** are categorized

as group one,

**minimumSignificantDigits** and **maximumSignificantDigits** are categorized as group two.

If group two properties are defined, then the group one properties will be ignored.

#### *Custom number formatting and parsing*

Custom number formatting and parsing can also be achieved by directly specifying the pattern in the **format** property of **NumberFormatOptions**. One or more of the custom format specifiers listed in the table below can be used to create custom number format.

Specifier	Description	Input	Format Output
0	Replaces the zero with the corresponding digit if one is present. Otherwise, zero appears in the result string.	<code>instance.formatNumber(123,{format: '0000' })</code>	<code>'0123'</code>
#	Replaces the "#" symbol with the corresponding digit if one is present; otherwise, no digit appears in the result string.	<code>instance.formatNumber(1234,{format: '####' })</code>	<code>'1234'</code>
.	Denotes the number of digits allowed after the decimal points if it's not specified then no need to specify decimal point values.	<code>instance.formatNumber(546321,{format: '###0.##0#' })</code>	<code>'546321.000'</code>

| % | Percent specifier denotes the percentage type format. | `instance.formatNumber(1,{format: '0000 %'})` | `'0100 %'` |

| \$ | Denotes the currency type format based on the global currency code specified. | `instance.formatNumber(13,{format: '$ ###.00'})` | `'$ 13.00'` |

| ; | Denotes separate formats for positive, negative and zero values. | `instance.formatNumber(-120,{format: '###.##;(###.00);-0'})` | `'(120.00)'` |

| 'String' (single Quotes) | Denotes the characters enclosed within single Quote(') to be replaced in the resultant string. | `instance.formatNumber(-123.44,{format: "####.## '@"})` | `'123.44 @'` |

Note: If a custom format pattern is specified, other [NumberFormatOptions](#) properties will not be considered.

### Number Parsing

``getNumberParser``

The [getNumberParser](#) method, which will return a function that parses a given string based on the [NumberFormatOptions](#) specified.

### APP.VUE

```
<template>
<div class="result"></div>
</template>
<script>
import Vue from 'vue';
import { Internationalization } from '@syncfusion/ej2-base';
export default {
  mounted:function() {
    var intl = new Internationalization();
    var nParser = intl.getNumberParser({ format:'P2' , useGrouping: false});
    var val = nParser('123567.45%');
    document.querySelector('.result').innerHTML = val + '';
  }
}
</script>
<style>
</style>
```

{% previewsample "page.domainurl/code-snippet/common/intl-parseNumber1-cs1" %}

``parseNumber``

The [parseNumber](#) method, which takes two arguments, the string value and [NumberFormatOptions](#) and returns the numeric value.

### APP.VUE

```
<template>
<div class="result"></div>
</template>
<script>

import Vue from 'vue';
import { Internationalization } from '@syncfusion/ej2-base';
```

```
export default {
  mounted:function() {
    var intl = new Internationalization();
    var val = intl.parseNumber('$01,234,545.650', { format: 'C3', currency:
'USD', minimumIntegerDigits: 8 });
    document.querySelector('.result').innerHTML = val + '';
  }
}
</script>
<style>
</style>
```

{% previewsample "page.domainurl/code-snippet/common/intl-parseNumber-cs1" %}

### Number formatting

#### `getNumberFormat`

The [getNumberFormat](#) method will return a function that formats a given number based on the [NumberFormatOptions](#) specified.

### APP.VUE

```
<template>
  <div class="result"></div>
</template>
<script>
import Vue from 'vue';
import { Internationalization } from '@syncfusion/ej2-base';
export default {
  mounted:function() {
    var intl = new Internationalization();
    var nFormatter = intl.getNumberFormat({ skeleton: 'C3', currency:
'USD',minimumIntegerDigits:8});
    var formattedValue = nFormatter(1234545.65)
    document.querySelector('.result').innerHTML = formattedValue;
  }
}
</script>
<style>
</style>
```

{% previewsample "page.domainurl/code-snippet/common/intl-getNumber-format-cs1" %}

#### `formatNumber`

The [formatNumber](#) method, which takes two arguments, a numeric value and [NumberFormatOptions](#) and returns the formatted string.

### APP.VUE

```
<template>
  <div class="result"> </div>
</template>
<script>
import Vue from 'vue';
import { Internationalization } from '@syncfusion/ej2-base';
export default {
  mounted: function() {
```

```

var intl = new Internationalization();
var formattedString = intl.formatNumber(12345.65, { format: 'C5' ,
useGrouping: false,
minimumSignificantDigits:1, maximumSignificantDigits:3 });
document.querySelector('.result').innerHTML = formattedString;
}
}
</script>
<style>
</style>

```

{% previewsample "page.domainurl/code-snippet/common/intl-getNumber-format-cs2" %}

## Manipulating DateTime

### Supported format string

Date formatting and parsing operations are performed based on the [DateFormatOptions](#). You need to specify some or all of the following properties mentioned in the table below.

Options	Descriptions
---------	--------------

---	---	---
-----	-----	-----

Type	It specifies the type of format to be used supported types .
1. <b>date</b>	2. <b>dateTime</b>
3. <b>time</b>	Based on the type specified the supported skeletons are given below.
1. short	2. medium, 3. long 4. full
E.g: <code>formatDate(new Date(), {type: 'date', skeleton:medium})</code>	
Note: If no type is specified then <b>date</b> type is set by default.	

skeleton	Specifies the format in which the <code>dateTime</code> format will process
----------	---

<!-- markdownlint-disable MD036 -->

### Date type skeletons

skeleton	Option input	Format	Output
----------	--------------	--------	--------

---	---	---
-----	-----	-----

short	{type: 'date', skeleton:'short'}	11/4/16
-------	----------------------------------	---------

medium	{type: 'date', skeleton:'medium'}	Nov 4, 2016
--------	-----------------------------------	-------------

long	{type: 'date', skeleton:'long'}	November 4, 2016
------	---------------------------------	------------------

full	{type: 'date', skeleton:'full'}	Friday, November 4, 2016
------	---------------------------------	--------------------------

### Time type skeletons

skeleton	Option input	Format	Output
----------	--------------	--------	--------

---	---	---
-----	-----	-----

short	{type: 'time', skeleton:'short'}	1:03 PM
-------	----------------------------------	---------

medium	{type: 'time', skeleton:'medium'}	1:03:04 PM
--------	-----------------------------------	------------

Long	{type: 'time', skeleton:'long'}	1:03:04 PM GMT+5
------	---------------------------------	------------------

full	{type: 'time', skeleton:'full'}	1:03:04 PM GMT+05:30
------	---------------------------------	----------------------

### DateTime type skeletons

	Skeleton	Option input	Format Output
	---	---	---
short	{type: 'dateTime', skeleton: 'short'}		11/4/16, 1:03 PM
medium	{type: 'dateTime', skeleton: 'medium'}		Nov 4, 2016, 1:03:04 PM
Long	{type: 'dateTime', skeleton: 'long'}		November 4, 2016 at 1:03:04 PM GMT+5
full	{type: 'dateTime', skeleton: 'full'}		Friday, November 4, 2016 at 1:03:04 PM GMT+05:30

### Additional skeletons

Apart from the standard date type formats, additional formats are supported by using the additional skeletons given in the below table.

	skeleton	Option input	Format Output
	---	---	---
d	{skeleton: 'd'}		7
E	{skeleton: 'E'}		Mon
Ed	{skeleton: 'Ed'}		7 Mon
Ehm	{skeleton: 'Ehm'}		Mon 12:43 AM
EHm	{skeleton: 'EHm'}		Mon 12:43
Ehms	{skeleton: 'Ehms'}		Mon 2:45:23 PM
EHms	{skeleton: 'EHms'}		Mon 12:45:45
Gy	{skeleton: 'Gy'}		2016 AD
GyMMM	{skeleton: 'GyMMM'}		: Nov 2016 AD
GyMMMd	{skeleton: 'GyMMMd'}		Nov 7, 2016 AD
GyMMMEd	{skeleton: 'GyMMMEd'}		Mon, Nov 7, 2016 AD
h	{skeleton: 'h'}		12 PM
H	{skeleton: 'H'}		12
hm	{skeleton: 'hm'}		12:59 PM
Hm	{skeleton: 'Hm'}		12:59
hms	{skeleton: 'hms'}		12:59:13 PM
Hms	{skeleton: 'Hms'}		12:59:13
M	{skeleton: 'M'}		11
Md	{skeleton: 'Md'}		11/7
MEd	{skeleton: 'hms'}		Mon, 11/7
MMM	{skeleton: 'MMM'}		Nov
MMMEd	{skeleton: 'MMMEd'}		Mon, Nov 7

```
| MMMd | {skeleton:'MMMEd'} | Nov 7 |
| ms | {skeleton:'ms'} | 59:13 |
| y | {skeleton:'y'} | 2016 |
| yM | {skeleton:'yM'} | 11/2016 |
| yMd | {skeleton:'yMd'} | 11/7/2016 |
| yMEd | {skeleton:'yMEd'} | Mon, 11/7/2016 |
| yMMM | {skeleton:'yMMM'} | Nov 2016 |
| yMMMd | {skeleton:'yMMMd'} | Nov 7, 2016 |
| yMMMEd | {skeleton:'yMMMEd'} | Mon, Nov 7, 2016 |
| yMMM | {skeleton:'yMMM'} | Nov 2016 |
```

Note: Culture specific format skeletons are also supported.

### *Custom formats*

To use the custom date and time formats, we need to specify the date/time pattern directly in the *format* property.

A custom format string must contain one or more of the following standard date/time symbols.

Symbols	Description
-----	Denotes the era in the date
y	Denotes the year.
M / L	Denotes month.
E / c	Denotes the day of week.
d	Denotes the day of month.
h / H	Denotes the hour. <i>h</i> for 12 hour and <i>H</i> for 24 hours format.
m	Denotes minutes.
s	Denotes seconds.
a	Denotes the am/pm designator it will only be displayed if hour is specified in the h format.
z	Denotes the time zone.
' (single quotes)	To display words in the formatted date you can specify the words with in the single quotes

### **Custom format example**

```
`ts
import Vue from 'vue';
import { Internationalization } from '@syncfusion/ej2-base';
var intl = new Internationalization();
```

```
var formattedString = intl.formatDate(new Date('1/12/2014 10:20:33'), { format: '\year:\y' \month:\MM' });
```

```
//Output: "year:2014 month:01"
```

```
,
```

Note: If the format property is given as an option, other properties are not considered.

```
<!-- markdownlint-enable MD036 -->
```

### *Date parsing*

``getDateParser``

The [getDateParser](#) method will return a function that parses a given string based on the [DateFormatOptions](#) specified.

### **APP.VUE**

```
<template>
  <div class="result"> </div>
</template>
<script>
import Vue from 'vue';
import {Internationalization} from '@syncfusion/ej2-base';
export default {
  mounted:function() {
    var intl = new Internationalization();
    var dParser = intl.getDateParser({skeleton: 'full', type: 'dateTime'});
    var val = dParser('Friday, November 4, 2016 at 1:03:04 PM GMT+05:30');
    document.querySelector('.result').innerHTML = val.toString();
  }
}
</script>
<style>
</style>
```

```
{% previewsample "page.domainurl/code-snippet/common/intl-parseDate-cs1" %}
```

``parseDate``

The date object is returned by the [parseDate](#) method, which takes two arguments, a string value and [DateFormatOptions](#).

### **APP.VUE**

```
<template>
  <div class="result"></div>
</template>
<script>
import Vue from 'vue';
import {Internationalization} from '@syncfusion/ej2-base';
export default {
  mounted:function() {
    var intl = new Internationalization();
    var val = intl.parseDate('11/2016',{skeleton: 'yM'});
    document.querySelector('.result').innerHTML = val.toString();
  }
}
```

```

</script>
<style>
</style>

```

{% previewsample "page.domainurl/code-snippet/common/intl-parseDate1-cs1" %}

### *Date Formatting*

#### ``getDateFormat``

The [getDateFormat](#) method, which will return a function that formats a given date object based on the [DateFormatOptions](#) specified.

#### **APP.VUE**

```

<template>
  <div class="result"></div>
</template>
<script>
import Vue from 'vue';
import { Internationalization } from '@syncfusion/ej2-base';
export default {
  mounted:function() {
    var intl = new Internationalization();
    var dFormatter = intl.getDateFormat({ skeleton: 'full', type: 'dateTime' });
    var formattedString = dFormatter(new Date('1/12/2014 10:20:33'));
    document.querySelector('.result').innerHTML = formattedString;
  }
}
</script>
<style>
</style>

```

{% previewsample "page.domainurl/code-snippet/common/intl-formatDate-cs1" %}

#### ``formatDate``

The [formatDate](#) method, which takes two arguments, the date object and [DateFormatOptions](#), returns the formatted string.

#### **APP.VUE**

```

<template>
  <div class="result"></div>
</template>
<script>
import Vue from 'vue';
import { Internationalization } from '@syncfusion/ej2-base';
export default {
  mounted:function() {
    var intl = new Internationalization();
    var date = new Date();
    var formattedString = intl.formatDate(new Date('1/12/2014 10:20:33'), {
      skeleton: 'GyMMM' });
    document.querySelector('.result').innerHTML = formattedString;
  }
}
</script>

```

```
<style>
</style>
```

```
{% previewsample "page.domainurl/code-snippet/common/intl-formatDate-cs2" %}
```

```
<!-- markdownlint-enable MD036 -->
```

## Drag and Drop in Vue

Drag and drop is a feature of a user interface that allows users to select an item or items and then move them to a different location or onto another interface element by "dragging" the selected item(s) with a pointing device (such as a mouse) and then "dropping" them at the desired location.

Syncfusion Vue components support drag and drop feature through two libraries. These are [Draggable](#) and [Droppable](#).

### Draggable

The Syncfusion's [Draggable](#) library allows users to make any DOM element draggable by passing it as a parameter to the [Draggable](#) constructor. This can be useful for creating interactive and user-friendly interfaces, such as allowing a user to reorder items in a list by dragging them. The below code snippet enables the draggable functionality for the specific DOM element passed to the [Draggable](#) constructor.

### APP.VUE

```
<template>
  <div id='container'>
    <div id='element1'>
      <p>Draggable Element </p>
    </div>
  </div>
</template>
<script>
  import { Draggable } from '@syncfusion/ej2-base';
  import Vue from "vue";
  export default {
    mounted: function () {
      var dragElement = document.getElementById('element1');
      var draggable = new Draggable(dragElement, { clone: false });
    }
  }
</script>
<style>
  #element1,
  .helper {
    height: 100px;
    width: 150px;
    border: 1px solid #cecece;
    cursor: move;
    user-select: none;
    color: #6a77a7;
    touch-action: none;
  }
  p {
    padding-top: 23px;
    text-align: center;
  }
</style>
```

```

.helper {
  opacity: 0.6;
}
.select {
  border: 1px solid #cccccc;
  background: #ededed;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/common/draggable-default-cs1" %}

### *Clone draggable element*

Syncfusion provides the option to create a clone of a draggable element while the user is dragging it. It can be achieved by setting the [clone](#) property to `true`. Here's an example of how to create a clone of a draggable element.

### **APP.VUE**

```

<template>
  <div id='container'>
    <div id='element1'>
      <p>Draggable Element </p>
    </div>
  </div>
</template>
<script>
  import { Draggable } from '@syncfusion/ej2-base';
  import Vue from "vue";
  export default {
    mounted: function () {
      var dragElement = document.getElementById('element1');
      var draggable = new Draggable(dragElement, { clone: true });
    }
  }
</script>
<style>
  #element1,
  .helper {
    height: 100px;
    width: 150px;
    border: 1px solid #cecece;
    cursor: move;
    user-select: none;
    color: #6a77a7;
    touch-action: none;
  }
  p {
    padding-top: 23px;
    text-align: center;
  }
  .helper {

  }
  .select {

```

```

        border: 1px solid #cccccc;
        background: #ededed;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/common/draggable-default-cs2" %}

### Drag area

A drag area is a specific area within a user interface that is designated for drag and drop operations. When an object or element is dragged within a drag area, certain actions or events may be triggered. The user can specify the drag area by using the [dragArea](#) property. Refer to the below sample.

### APP.VUE

```

<template>
  <div id='container'>
    <div id='droppable'>
      <p class='drop'><span>Drag Area </span></p>
    </div>
    <div id='element1'>
      <p class='drag-text'>Drag </p>
    </div>
  </div>
</template>
<script>
  import { Draggable, Droppable } from '@syncfusion/ej2-base';
  import Vue from "vue";
  export default {
    mounted: function () {
      var draggable = new
      Draggable(document.getElementById('element1'), {
        clone: false, dragArea: "#droppable"
      });
    }
  }
</script>
<style>
  #element1 {
    height: 100px;
    width: 150px;
    border: 1px solid #cecece;
    cursor: move;
    background: #cdf3e3;
    user-select: none;
    touch-action: none;
  }
  #element1 p {
    padding-top: 23px;
    text-align: center;
  }
  .drop {
    padding-top: 23px;
    text-align: center;
  }
</style>

```

```
#draggable {
  margin: 5px;
  line-height: 170px;
  font-size: 14px;
  width: 250px;
  border: 1px solid #cecece;
  background: #f6f6f6;
  touch-action: none;
}
</style>
```

```
{% previewsample "page.domainurl/code-snippet/common/drag-drop-action-cs1" %}
```

### Droppable

Droppable component refers to an area of a user interface that can receive a draggable component that is being moved by a user. Syncfusion's [Droppable](#) library converts any DOM element into a droppable zone, which accepts draggable elements.

When a draggable component is moved over a droppable component, the [drop](#) event can be triggered. The user can get details about the dropped element through the event argument. Based on the event argument, the user can append the dragged element to the target element.

Refer to the following code snippet to enable droppable zones.

### APP.VUE

```
<template>
  <div id='container'>
    <div id='draggable'>
      <p class='drop'><span>Drop Target </span></p>
    </div>
    <div id='element1'>
      <p class='drag-text'>Drag </p>
    </div>
  </div>
</template>
<script>
  import { Draggable, Droppable } from '@syncfusion/ej2-base';
  import Vue from "vue";
  export default {
    mounted: function () {
      var draggable = new
Draggable(document.getElementById('element1'), {
        clone: false
      });
      var droppable = new
Droppable(document.getElementById('draggable'), {
        drop: (e) => {
          e.droppedElement.querySelector('.drag-text').textContent
= 'Dropped';
        }
      });
    }
  }
</script>
<style>
```

```

#element1 {
  height: 100px;
  width: 150px;
  border: 1px solid #cecece;
  cursor: move;
  background: #cdffe3;
  user-select: none;
  touch-action: none;
}
#element1 p {
  padding-top: 23px;
  text-align: center;
}
.drop {
  padding-top: 23px;
  text-align: center;
}
#droppable {
  margin: 5px;
  line-height: 170px;
  font-size: 14px;
  width: 250px;
  border: 1px solid #cecece;
  background: #f6f6f6;
  touch-action: none;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/common/drag-drop-action-cs2" %}

## Deployment

### CDN

The CDN links are provided individually for all the scripts and style sheets of Syncfusion Vue UI components.

The CDN link is provided to following files in the package

1. UMD Files
2. CSS Files

The un-versioned CDN links, which always maintain the latest version scripts are deprecated from 2022 Vol1 - 20.1 version. These links are available with **19.4** version scripts to avoid breaking in sites and apps that use un-versioned links.

*The latest minified versions of all UMD, Global and CSS files are available on CDN:*

- <https://cdn.syncfusion.com/ej2/PACKAGENAME/dist/PACKAGENAME.umd.min.js>
- <https://cdn.syncfusion.com/ej2/PACKAGENAME/styles/THEMENAME.css>

For example

- <https://cdn.syncfusion.com/ej2/ej2-vue-inputs/dist/ej2-vue-inputs.umd.min.js>
- <https://cdn.syncfusion.com/ej2/ej2-vue-inputs/styles/material.css>

Versioned files are also available on CDN.

- <https://cdn.syncfusion.com/ej2/VERSION/PACKAGENAME/dist/PACKAGENAME.umd.min.js>
- <https://cdn.syncfusion.com/ej2/VERSION/PACKAGENAME/styles/THEMENAME.css>

For example

- <https://cdn.syncfusion.com/ej2/1.0.18/ej2-vue-inputs/dist/ej2-vue-inputs.umd.min.js>
- <https://cdn.syncfusion.com/ej2/1.0.18/ej2-vue-inputs/styles/material.css>

## Packages

Syncfusion Vue packages is published and available in public [npm](#) registry.

### Anatomy of NPM packages

Syncfusion Vue UI components are shipped as npm packages. Following table explains the purpose of each file available in the package.

Files	Purpose
----- -----	
-----	
<b>dist/es6</b>	This folder contains the ES6 formatted JS file of the package.
<b>dist/&lt;packagename&gt;.umd.min.js</b> <b>dist/&lt;packagename&gt;.umd.js</b>	For applications using AMD or Common JS based module loader can be utilize these files.
<b>src/</b>	This folder contains the script files in AMD format. You can connect these AMD files as a package in System JS or Require JS.
<b>styles/&lt;theme name&gt;.css</b> <b>styles/&lt;theme name&gt;.scss</b>	This folder contains the CSS and SCSS files of the package.

## How To

### Updating Syncfusion npm packages

Keeping Syncfusion npm packages up to date is important to ensure that you have access to the latest features and bug fixes. The [npm-check-updates](#) package is a helpful tool that can be used to update your Syncfusion packages to their latest versions.

#### Updating All Syncfusion Packages

To update all Syncfusion packages, you can install the `npm-check-updates` package globally by running the following command,

```
`bash
npm install -g npm-check-updates
`
```

Next, use the `ncu` command to update the `package.json` file to the latest version for all `@syncfusion` packages,

```
`bash
ncu -u -f /^@syncfusion/
`
```

Finally, run the following commands to update the packages in `node_modules` and remove any duplicate packages that have been installed,

```
`bash
npm update
npm dedupe
`
```

### Updating a specific npm package

You can also update a specific npm package by running the following commands from the command prompt in the root of your application,

```
`bash
npm update @syncfusion/ej2-grids
npm update @syncfusion/ej2-vue-grids
npm dedupe
`
```

This will update the specific package you have provided and run `npm dedupe` command which will remove any duplicate package.

### How to resolve Content Security Policy (CSP) errors

Enabling the strict Content Security Policy (CSP) may cause the following issue with the Syncfusion Vue components in your application.

### Image loading

Syncfusion license banner utilize the image from **base64**, which is not allowed on strict CSP-enabled sites. To overcome this restriction, it is necessary to add the [img-src data:](#) directive in the meta tag or consider [registering the license key](#).

## Troubleshoot

### Content Security Policy

Content Security Policy (CSP) is a security feature implemented by web browsers that helps to protect against attacks such as cross-site scripting (XSS) and data injection. It limits the sources from which content can be loaded on a web page.

To enable strict [Content Security Policy \(CSP\)](#), certain browser features are disabled by default. In order to use Syncfusion Vue components with strict CSP mode, it is essential to include following directives in the CSP meta tag.

- Syncfusion components are rendered with calculated **inline styles** and **base64** font icons, which are blocked on a strict CSP-enabled site. To allow them, add the [style-src 'self' 'unsafe-inline'](#); and [font-src 'self' data:](#) directives in the meta tag as follows.

### HTML

```
<meta http-equiv="Content-Security-Policy" content="default-src 'self';
style-src 'self' 'unsafe-inline';
font-src 'self' data:;" />
```

- Syncfusion **material** and **tailwind** built-in themes contain a reference to the [Roboto's external font](#), which is also blocked. To allow them, add the [external font](#) reference to the [style-src](#) and [font-src](#) directives in the above meta tag.

The resultant meta tag is included within the `<head>` tag and resolves the CSP violation on the application's side when utilizing Syncfusion Vue components with material and tailwind themes.

### HTML

```
<head>
...
<meta http-equiv="Content-Security-Policy" content="default-src 'self';
style-src 'self' https://fonts.googleapis.com/ 'unsafe-inline';
font-src 'self' https://fonts.googleapis.com/ https://fonts.gstatic.com/
data:;" />
</head>
```

**Note:** From the 2023 Vol2 - 22.1 release onwards, the Content Security Policy for Syncfusion Vue components has been enhanced. The usage of the `unsafe-eval` directive has been eliminated from the CSP meta tag.

[View the Vue sample enabled with strict CSP in Github](#)

- [How to resolve the Content Security Policy \(CSP\) errors](#)

## Visual studio code integration

### Visual Studio Code Integration

#### Overview

The Syncfusion Essential Studio Web extension for Visual Studio Code allows you to use the Syncfusion JavaScript components(React, Angular, and Vue) easily by configuring the Syncfusion NPM packages and themes.

The Syncfusion Web Extension provides the following support in Visual Studio Code:

[Project-Template](#): Creates Syncfusion Web applications by adding the required Syncfusion JavaScript components.

### Visual Studio Code Extensions

#### Download and Installation

Syncfusion publishes the Visual Studio Code extension in [Visual Studio Code marketplace](#). You can either install it from Visual Studio Code or download and install it from the Visual Studio Code marketplace.

#### Prerequisites

The following prerequisites software needs to be installed for the Syncfusion Web extension installation and for creating the Syncfusion Web applications along with any one of the Framework(React, Angular, and Vue).

- [Visual Studio Code](#)

The minimum version of the Visual Studio Code is 1.38.0 to use the Syncfusion Web Extension.

- [C# Extension](#)
- [Node.js](#)

#### Install through the Visual Studio Code extensions

The following steps explain how to install the Syncfusion Web extensions from Visual Studio Code Extensions.

1. Open Visual Studio Code.
2. Go to **View > Extensions**, and open Manage Extensions.
3. Type **"Syncfusion Web"** in the search box.

4. Click the Install button on the “Web VSCode Extensions - Syncfusion” extension.
5. After the installation, reload the Visual Studio Code using the **Reload Required** in Visual Studio Code palette.
6. Now, use the Syncfusion Web extensions from the Visual Studio Code palette.

#### *Install from the Visual Studio Code Marketplace*

The following steps explain how to download Syncfusion Web applications from the Visual Studio Code Marketplace and install them.

1. Open the [Syncfusion Web Extension](#)
2. Click Install from Visual Studio Code Marketplace. The browser opens the popup with the information like “Open Visual Studio Code”. Click Open Visual Studio Code, then [Syncfusion Web Extension](#) will open in Visual Studio Code.
3. Click the Install button in the “Web VSCode Extensions - Syncfusion” extension.
4. After the installation, reload the Visual Studio Code using the Reload Required in Visual Studio Code palette.
5. Now, use the Syncfusion Web extensions from the Visual Studio Code palette.

## Visual Studio Code Extensions

### Create project

Syncfusion provides **project templates** for **Visual Studio Code** to create Syncfusion Web applications. The Syncfusion Web Project template creates applications with the selected Framework (React, Angular, and Vue), required Syncfusion NPM packages, component render code for the Grid, Chart, and Scheduler components, and a style to make development with Syncfusion components easier.

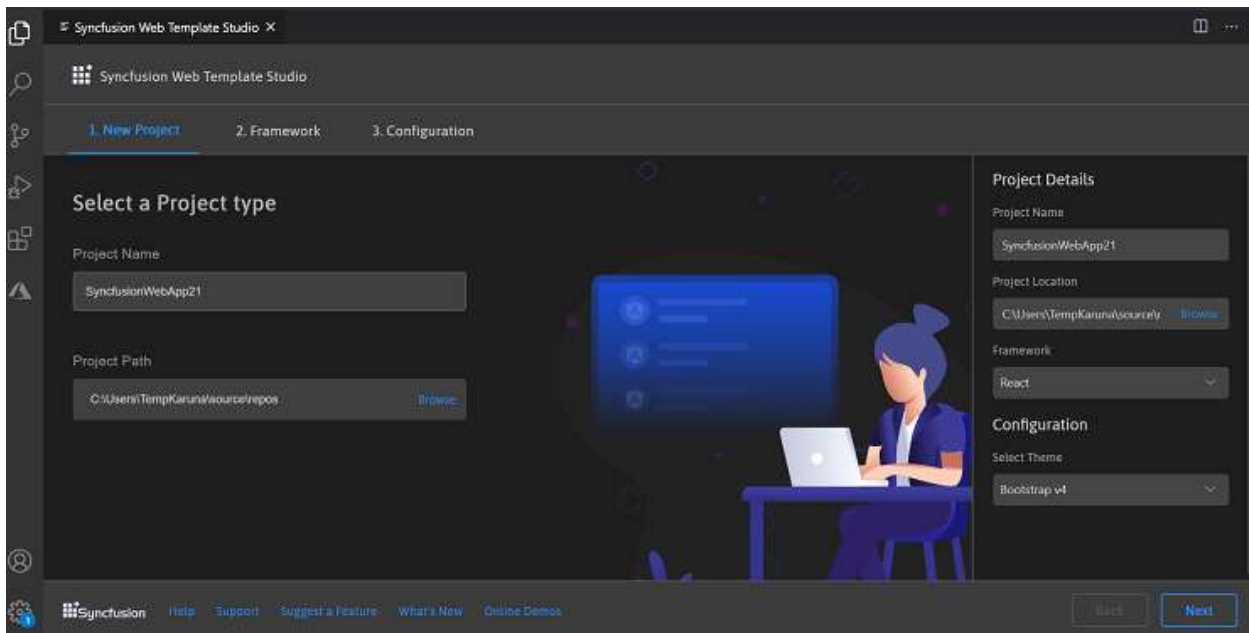

The Syncfusion Visual Studio Code project template provides support for Web project templates from v18.3.0.47.

The steps below help you to create **Syncfusion Web Applications** through the **Visual Studio Code**:

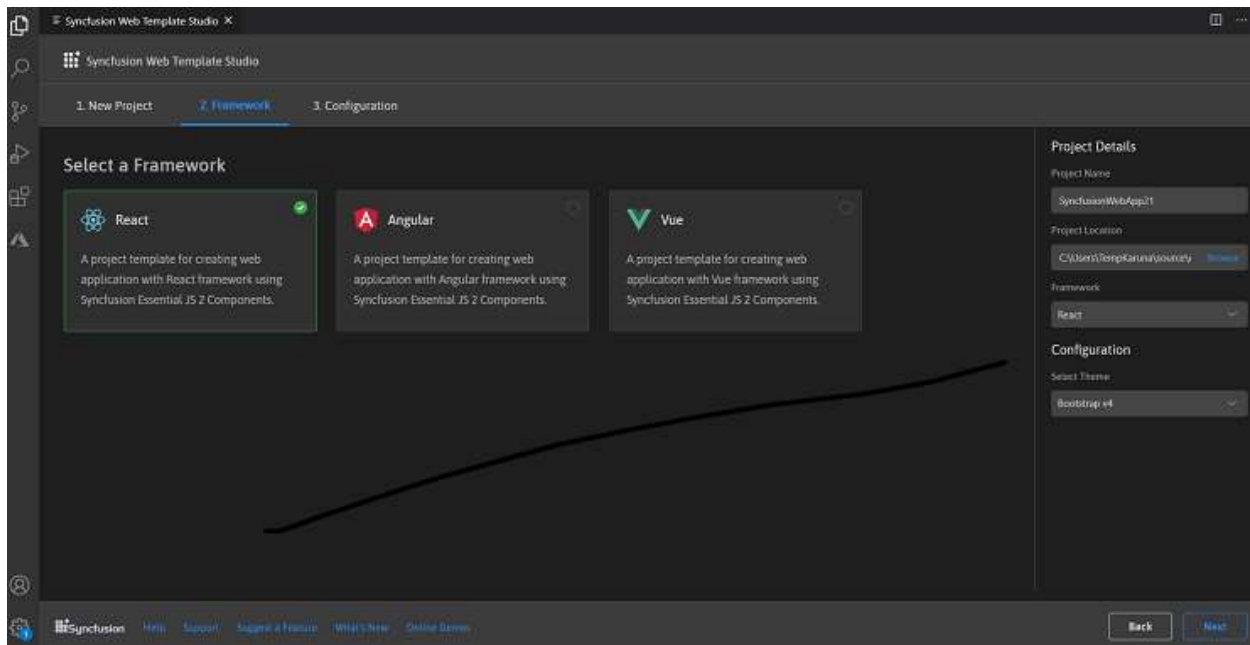

1. In Visual Studio Code, open the command palette by pressing Ctrl+Shift+P. The Visual Studio Code palette opens, search the word Syncfusion, so you can get the templates provided.

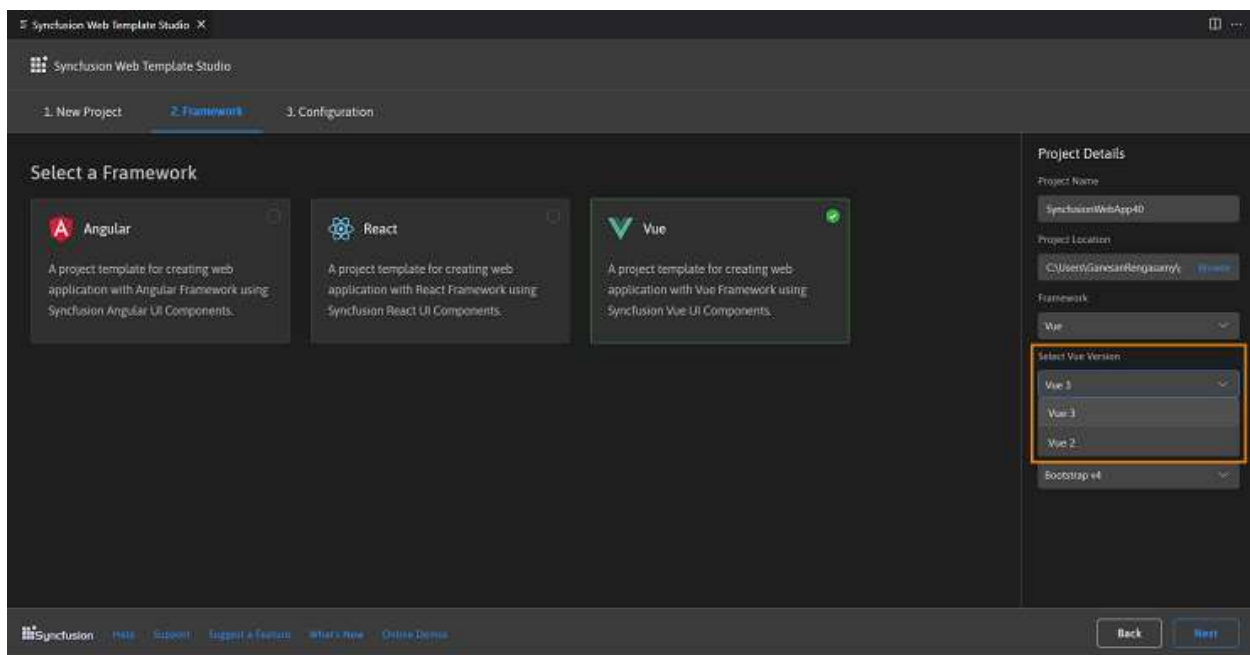

2. Select **Syncfusion Web Template Studio: Launch** and then press enter, Template Studio wizard for configuring the Syncfusion Web app will appear. Provide the require Project Name and Path to create the new Syncfusion Web application along with any one of the Framework (React, Angular, and Vue).

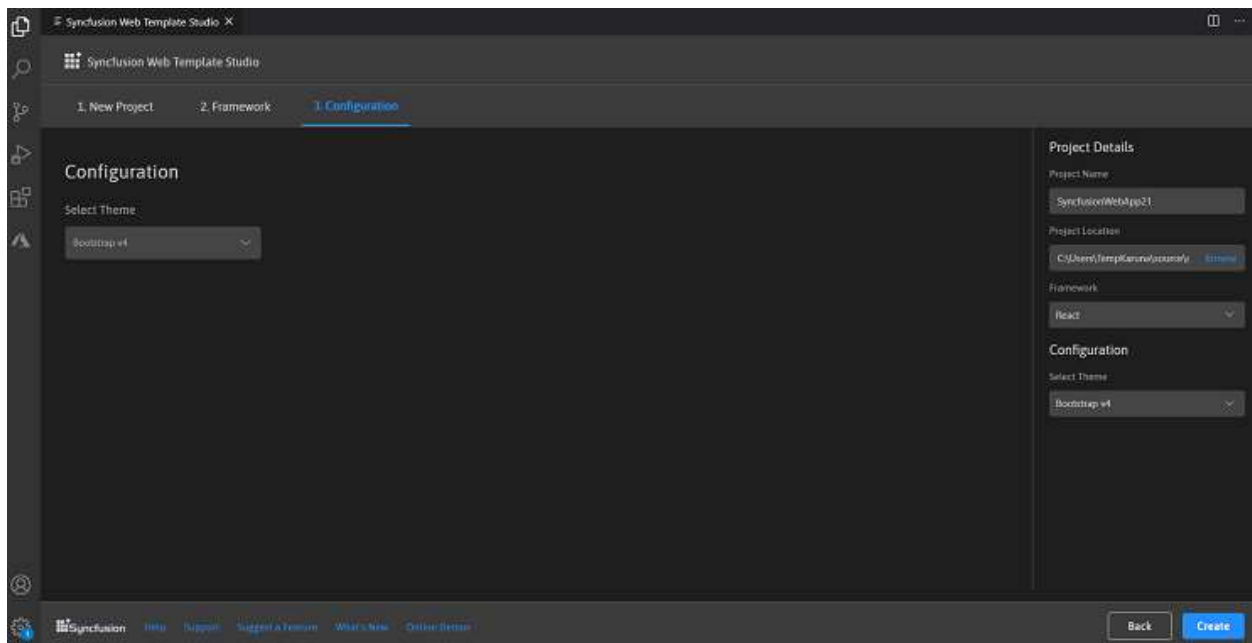

3. Click either **Next** or **Framework** tab, and the Framework types will be appears. Choose any one of the Framework:
  - React
  - Angular
  - Vue

If you choose the Vue framework, the **Select Vue Version** option will appear in the **Project Details** section. You can create the Vue application using either the Vue 3 or Vue 2 versions.

4. Click either **Next** or the **Configuration** tab, and the Configuration section will be loaded. Choose the preferred theme and then click **Create**. The project will be created.

5. The created Syncfusion Web App is configured with the Syncfusion NPM packages, styles, and the component render code for the Syncfusion component added.

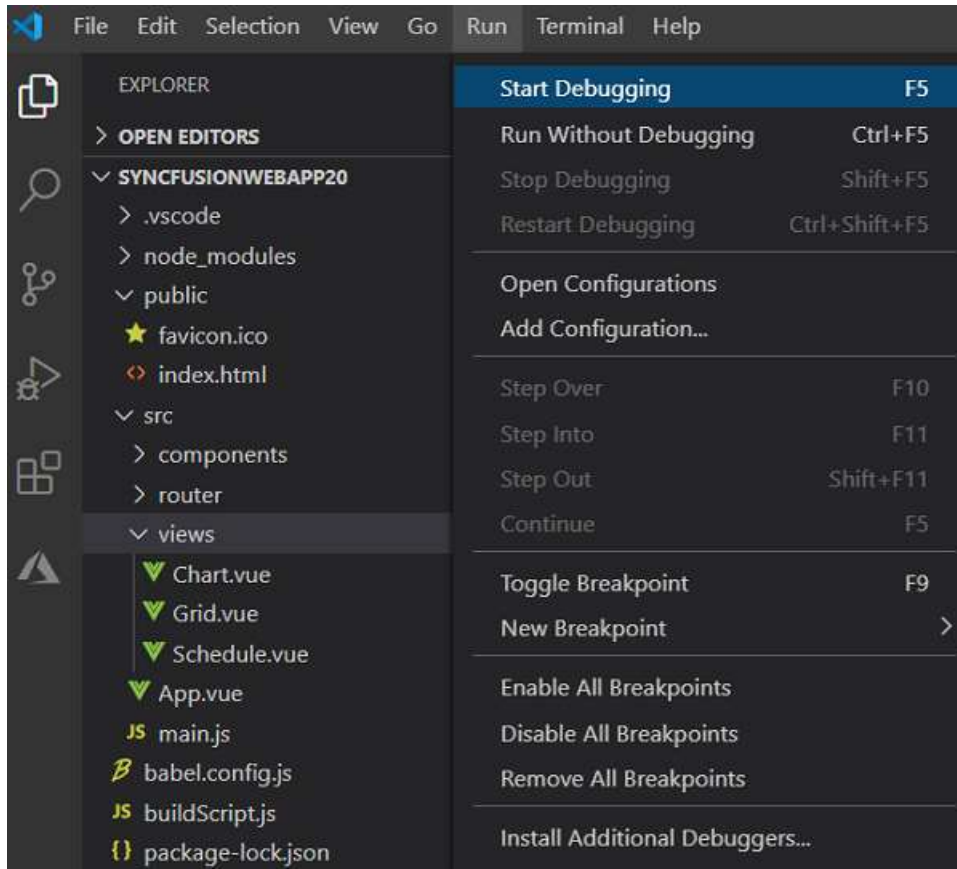

```
"name": "syncfusionwebproject",
"version": "0.1.0",

  "bootstrap": "4.5.0",
  "bootstrap-vue": "2.15.0",
  "core-js": "3.6.5",
  "vue": "2.6.11",
  "vue-router": "3.3.4",
  "fs-extra": "9.0.1",
  "@syncfusion/ej2-vue-charts": "^18.3.35",
  "@syncfusion/ej2-vue-grids": "^18.3.35",
  "@syncfusion/ej2-vue-schedule": "^18.3.35"
},
```

```
25
26 <style>
27   @import '../..node_modules/@syncfusion/ej2-base/styles/fabric.css';
28   @import '../..node_modules/@syncfusion/ej2-buttons/styles/fabric.css';
29   @import '../..node_modules/@syncfusion/ej2-calendars/styles/fabric.css';
30   @import '../..node_modules/@syncfusion/ej2-dropdowns/styles/fabric.css';
31   @import '../..node_modules/@syncfusion/ej2-inputs/styles/fabric.css';
32   @import '../..node_modules/@syncfusion/ej2-navigations/styles/fabric.css';
33   @import '../..node_modules/@syncfusion/ej2-popups/styles/fabric.css';
34   @import '../..node_modules/@syncfusion/ej2-vue-schedule/styles/fabric.css';
35
36   #app{
37     height: 350px;
38   }
39 </style>
```

*Run the application*

1. Click on **F5** or navigate to **Run>Start debugging**

2. After compilation process completed, open the local host link in browser to see the output.

SyncfusionWebApp20 Grid Chart Schedule

### Syncfusion Vue Grid

Order ID	Customer ID	Freight

**SyncfusionWebApp20**

Syncfusion Vue is a modern UI Components library that has been built from the ground up to be lightweight, responsive, modular and touch friendly.

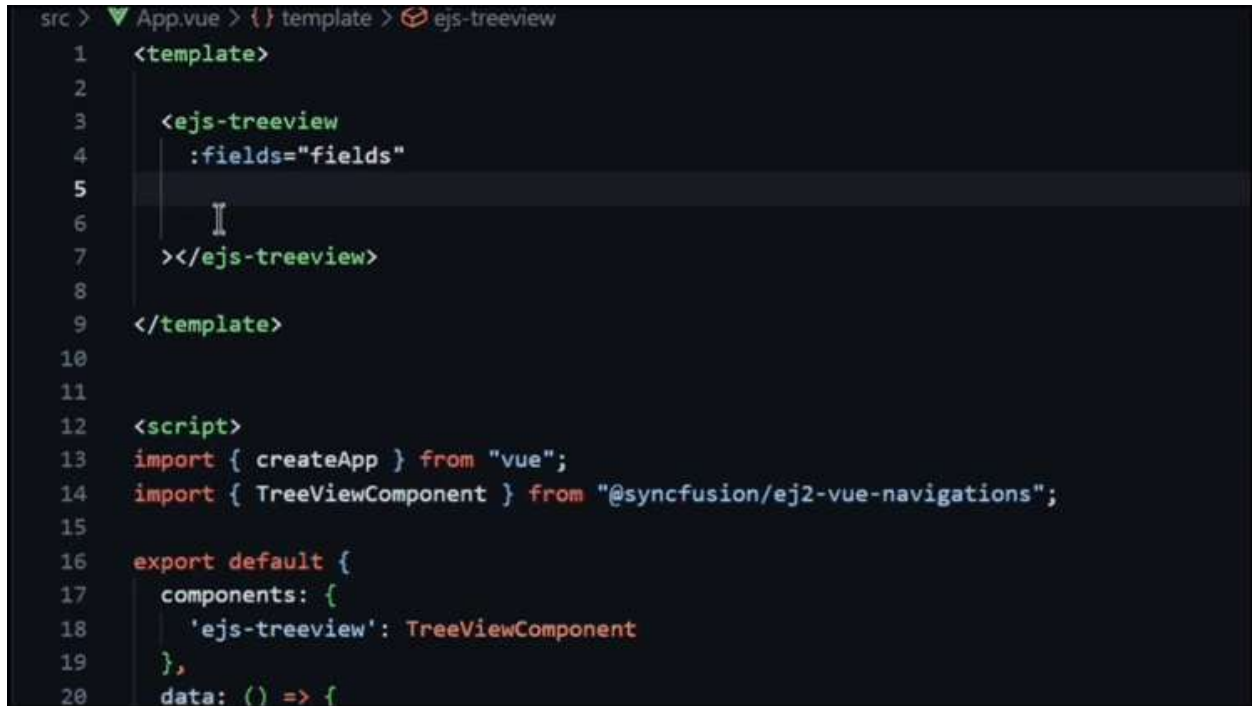

Help  
Online Samples  
Support

## Intellisense of Syncfusion Vue Components

Intellisense of the Vue component provides code suggestions, error checking, property hints, and other useful information while typing. It will save a lot of time and help you develop more precise and efficient code.

Install the [Volar](#) extension for Visual Studio Code to use Intellisense in the Syncfusion Vue component. After installing the addon, typing in your Vue files will generate Intellisense suggestions.

```

src > App.vue > {} template > ejs-treeview
1  <template>
2
3  <ejs-treeview
4    :fields="fields"
5
6    </ejs-treeview>
7
8  </template>
9
10
11
12  <script>
13  import { createApp } from "vue";
14  import { TreeViewComponent } from "@syncfusion/ej2-vue-navigations";
15
16  export default {
17    components: {
18      'ejs-treeview': TreeViewComponent
19    },
20    data: () => {

```

It's significant to note that the Vue component properties and events are listed as **kebab-casing** rather than **camel-casing**. Vue versions 2.7 and above will support Intellisense.

## Accordion

### Getting Started with the Vue Accordion Component in Vue 2

This article provides a step-by-step guide for setting up a Vue 2 project using [Vue-CLI](#) and integrating the Syncfusion Vue Accordion component using the [Composition API](#) / [Options API](#).

#### Prerequisites

[System requirements for Syncfusion Vue UI components](#)

#### Dependencies

The following list of dependencies are required to use the Accordion component in your application.

`javascript

```

|-- @syncfusion/ej2-vue-navigations
|-- @syncfusion/ej2-base
|-- @syncfusion/ej2-vue-base
|-- @syncfusion/ej2-navigations
|-- @syncfusion/ej2-inputs
|-- @syncfusion/ej2-buttons
`

```

### Setting up the Vue 2 project

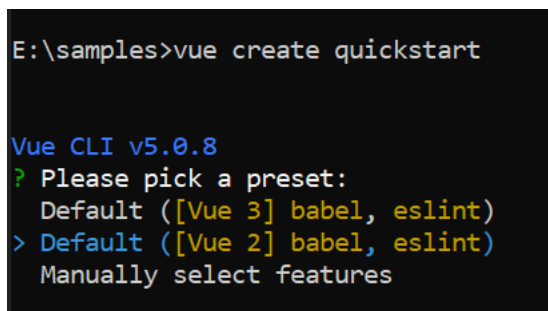

To generate a Vue 2 project using Vue-CLI, use the [vue create](#) command. Follow these steps to install Vue CLI and create a new project:

```
`bash
npm install -g @vue/cli
vue create quickstart
cd quickstart
npm run serve
`
```

or

```
`bash
yarn global add @vue/cli
vue create quickstart
cd quickstart
yarn run serve
`
```

When creating a new project, choose the option **Default ([Vue 2] babel, eslint)** from the menu.

```
E:\samples>vue create quickstart

Vue CLI v5.0.8
? Please pick a preset:
  Default ([Vue 3] babel, eslint)
> Default ([Vue 2] babel, eslint)
  Manually select features
```

Once the **quickstart** project is set up with default settings, proceed to add Syncfusion components to the project.

### Adding syncfusion packages

All the available Essential JS 2 packages are published in [npmjs.com](https://www.npmjs.com) registry. You can choose the component that you want to install. For this application, we are going to use Accordion component.

To install Accordion component, use the following command

```
`bash
npm install @syncfusion/ej2-vue-navigations --save
`

or

`bash
```

```
yarn add @syncfusion/ej2-vue-navigations
```

Import Syncfusion CSS styles

Add Accordion component's styles as given below in `<style>` section of the `App.vue` file.

In this article, the `Material` theme is applied using CSS styles, which are available in installed packages. The necessary Material CSS styles for the Accordion component and its dependents were imported into the `<style>` section of `src/App.vue` file.

#### ~/SRC/APP.VUE

```
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
navigations/styles/material.css";
</style>
```

#### Add Syncfusion Vue component

Follow the below steps to add the Vue Accordion component using `Composition API` or `Options API`:

1\ First, import and register the Accordion component in the `script` section of the `src/App.vue` file. If you are using the `Composition API`, you should add the `setup` attribute to the `script` tag to indicate that Vue will be using the `Composition API`.

#### COMPOSITION API (~/SRC/APP.VUE)

```
<script setup>
import {
  AccordionComponent as EjsAccordion, AccordionItemsDirective as
  EAccordionitems, AccordionItemDirective as EAccordionitem
} from "@syncfusion/ej2-vue-navigations";
</script>
```

#### COMPOSITION API (~/SRC/APP.VUE)

```
<script>
import { AccordionComponent, AccordionItemDirective, AccordionItemsDirective
} from '@syncfusion/ej2-vue-navigations';
export default {
  name: 'app',
  components: {
    'ejs-accordion': AccordionComponent
  },
}
</script>
```

2\ Add the EJ2 Vue Accordion using to the `App.vue` file in `src` directory.

#### (~/SRC/APP.VUE)

```
<template>
<div id="app">
<ejs-accordion >
```

```

<e-accordionitems>
  <e-accordionitem expanded='true' header='ASP.NET' content='Microsoft ASP.NET
  is a set of technologies in the Microsoft .NET Framework for building Web
  applications and XML Web services.'></e-accordionitem>
  <e-accordionitem header='ASP.NET MVC' content='The Model-View-Controller
  (MVC) architectural pattern separates an application into three main
  components: the model, the view, and the controller.'></e-accordionitem>
  <e-accordionitem header='JavaScript' content='JavaScript (JS) is an
  interpreted computer programming language. It was originally implemented as
  part of web browsers so that client-side scripts could interact with the
  user, control the browser, communicate asynchronously, and alter the
  document content that was displayed.'></e-accordionitem>
</e-accordionitems>
</ejs-accordion>
</div>
</template>

```

### Running the Application

Now run the `npm run dev` command in the console, it will build your application and open in the browser.

### COMPOSITION API (~SRC/APP.VUE)

```

<template>
  <ejs-accordion>
    <e-accordionitems>
      <e-accordionitem expanded="true" header="ASP.NET"
        content="Microsoft ASP.NET is a set of technologies in the Microsoft
        .NET Framework for building Web applications and XML Web services."></e-
        accordionitem>
      <e-accordionitem header="ASP.NET MVC"
        content="The Model-View-Controller (MVC) architectural pattern
        separates an application into three main components: the model, the view,
        and the controller."></e-accordionitem>
      <e-accordionitem header="JavaScript"
        content="JavaScript (JS) is an interpreted computer programming
        language. It was originally implemented as part of web browsers so that
        client-side scripts could interact with the user, control the browser,
        communicate asynchronously, and alter the document content that was
        displayed."></e-accordionitem>
    </e-accordionitems>
  </ejs-accordion>
</template>
<script setup>
import {
  AccordionComponent as EjsAccordion, AccordionItemsDirective as
  EAccordionitems, AccordionItemDirective as EAccordionitem
} from "@syncfusion/ej2-vue-navigations";
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
navigations/styles/material.css";
</style>

```

### OPTIONS API (~ /SRC/APP.VUE)

```
<template>
  <div id="app">
    <ejs-accordion >
      <e-accordionitems>
        <e-accordionitem expanded='true' header='ASP.NET' content='Microsoft
ASP.NET is a set of technologies in the Microsoft .NET Framework for
building Web applications and XML Web services.'></e-accordionitem>
        <e-accordionitem header='ASP.NET MVC' content='The Model-View-
Controller (MVC) architectural pattern separates an application into three
main components: the model, the view, and the controller.'></e-
accordionitem>
        <e-accordionitem header='JavaScript' content='JavaScript (JS) is an
interpreted computer programming language.It was originally implemented as
part of web browsers so that client-side scripts could interact with the
user, control the browser, communicate asynchronously, and alter the
document content that was displayed.'></e-accordionitem>
      </e-accordionitems>
    </ejs-accordion>
  </div>
</template>
<script>
import { AccordionComponent, AccordionItemDirective, AccordionItemsDirective
} from '@syncfusion/ej2-vue-navigations';
export default {
  name: 'app',
  components: {
    'ejs-accordion': AccordionComponent,
    'e-accordionitem': AccordionItemDirective,
    'e-accordionitems': AccordionItemsDirective
  },
}
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-vue-
navigations/styles/material.css";
</style>
```

{% previewsample "page.domainurl/code-snippet/accordion/getting-started-cs1" %}

#### Initialize the Accordion using HTML elements

The Accordion component can be rendered based on the given HTML element using `<ejs-accordion>`. You need to follow the below structure of HTML elements to render the Accordion inside the `<ejs-accordion>` tag.

,

`<ejs-accordion>` --> Root Accordion Element

`<div>` --> Accordion Item Container

`<div>` --> Accordion Header Container

`<div> </div>` --> Accordion Header

```

</div>
<div> --> Accordion Panel Container
<div> </div> --> Accordion Content
</div>
</div>
</ejs-accordion>
,

```

### COMPOITION API (~SRC/APP.VUE)

```

<template>
  <div id="app">
    <ejs-accordion>
      <div>
        <div>
          <div> ASP.NET </div>
        </div>
        <div>
          <div> Microsoft ASP.NET is a set of technologies in the
Microsoft .NET Framework for building Web applications
and XML Web services </div>
        </div>
      </div>
      <div>

          <div> ASP.NET MVC </div>
        </div>
        <div>
          <div> The Model-View-Controller (MVC) architectural
pattern separates an application into three main components:
the model, the view, and the controller </div>
        </div>
      </div>
      <div>
        <div>
          <div> JavaScript </div>
        </div>
        <div>
          <div> JavaScript (JS) is an interpreted computer
programming language.It was originally implemented as part
of web browsers so that client-side scripts could
interact with the user, control the browser </div>
        </div>
      </div>
    </ejs-accordion>
  </div>
</template>
<script setup>
import { AccordionComponent as EjsAccordion } from '@syncfusion/ej2-vue-
navigations';
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";

```

```
@import "../node_modules/@syncfusion/ej2-vue-
navigations/styles/material.css";
</style>
```

### OPTIONS API (~SRC/APP.VUE)

```
<template>
  <div id="app">
    <ejs-accordion>
      <div>
        <div>
          <div> ASP.NET </div>
        </div>
        <div>
          <div> Microsoft ASP.NET is a set of technologies in the
Microsoft .NET Framework for building Web applications
and XML Web services </div>
        </div>
      </div>
    </div>
    <div>
      <div>
        <div> ASP.NET MVC </div>
      </div>
      <div>
        <div> The Model-View-Controller (MVC) architectural
pattern separates an application into three main components:
the model, the view, and the controller </div>
      </div>
    </div>
    <div>
      <div>
        <div> JavaScript </div>
      </div>
      <div>
        <div> JavaScript (JS) is an interpreted computer
programming language.It was originally implemented as part
of web browsers so that client-side scripts could
interact with the user, control the browser </div>
      </div>
    </div>
  </ejs-accordion>
</div>
</template>
<script>
import { AccordionComponent } from '@syncfusion/ej2-vue-navigations';
export default {
  name: 'app',
  components: {
    'ejs-accordion': AccordionComponent
  },
}
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-vue-
navigations/styles/material.css";
```

```
</style>
```

{% previewsample "page.domainurl/code-snippet/accordion/accordion-container-cs1" %}
```

**Note:** You can refer to our [Vue Accordion](#) feature tour page for its groundbreaking feature representations. You can also explore our [Vue Accordion Component example](#) that shows how to render the Accordion in Vue.

## Getting Started with Vue Accordion Component in Vue 3

This article provides a step-by-step guide for setting up a [Vite](#) project with a JavaScript environment and integrating the Syncfusion Vue Accordion component using the [Composition API](#) / [Options API](#).

The **Composition API** is a new feature introduced in Vue.js 3 that provides an alternative way to organize and reuse component logic. It allows developers to write components as functions that use smaller, reusable functions called composition functions to manage their properties and behavior.

The **Options API** is the traditional way of writing Vue.js components, where the component logic is organized into a series of options that define the component's properties and behavior. These options include data, methods, computed properties, watchers, lifecycle hooks, and more.

### Prerequisites

#### [System requirements for Syncfusion Vue UI components](#)

#### Setup the Vite project

A recommended approach for beginning with Vue is to scaffold a project using [Vite](#). To create a new Vite project, use one of the commands that are specific to either NPM or Yarn.

```
`bash
```

```
npm create vite@latest
```

```
,
```

```
or
```

```
`bash
```

```
yarn create vite
```

```
,
```

Using one of the above commands will lead you to set up additional configurations for the project as below:

1. Define the project name: We can specify the name of the project directly. Let's specify the name of the project as **my-project** for this article.

```
`bash
```

```
? Project name: » my-project
```

```
,
```

2. Select **Vue** as the framework. It will create a Vue 3 project.

```
`bash
```

```
? Select a framework: » - Use arrow-keys. Return to submit.
```

Vanilla

Vue

React

Preact

Lit

Svelte

Others

,

3. Choose **JavaScript** as framework variant to build this Vite project using JavaScript and Vue.

```
`bash
```

? Select a variant: » - Use arrow-keys. Return to submit.

JavaScript

TypeScript

Customize with create-vue ↗

Nuxt ↗

,

4. Upon completing the aforementioned steps to create the **my-project**, run the following command to install its dependencies:

```
`bash
```

```
cd my-project
```

```
npm install
```

,

or

```
`bash
```

```
cd my-project
```

```
yarn install
```

,

Now that **my-project** is ready to run with default settings, let's add Syncfusion Vue Accordion component to the project.

#### Adding Syncfusion Vue packages

Syncfusion Vue component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion Vue components in the project, install the corresponding npm package.

This article uses the [Vue Accordion component](#) as an example. To use the **Vue Accordion** component in the project, the **@syncfusion/ej2-vue-navigations** package needs to be installed using the following command

```
`bash
npm install @syncfusion/ej2-vue-navigations --save
```

```
,
```

or

```
`bash
yarn add @syncfusion/ej2-vue-navigations
```

```
,
```

### Import Syncfusion CSS styles

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, [CRG](#) and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to themes in a Vue project.

In this article, **Material** theme is applied using CSS styles, which are available in installed packages. The necessary **Material** CSS styles for the Accordion component and its dependents were imported into the `<style>` section of the **src/App.vue** file.

```
`html
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-navigations/styles/material.css";
</style>
```

### Adding Syncfusion Vue component

Follow the below steps to add the Vue Accordion component using **Composition API** or **Options API**:

1.First, import and register the Accordion component and its child directives in the **script** section of the **src/App.vue** file. If you are using the **Composition API**, you should add the **setup** attribute to the **script** tag to indicate that Vue will be using the **Composition API**.

#### **COMPOSITION API (~SRC/APP.VUE)**

```
<script setup>
import {
  AccordionComponent as EjsAccordion, AccordionItemsDirective as
  EAccordionitems, AccordionItemDirective as EAccordionitem
} from "@syncfusion/ej2-vue-navigations";
</script>
```

#### **OPTIONS API (~SRC/APP.VUE)**

```
<script>
import {
  AccordionComponent,
  AccordionItemsDirective,
  AccordionItemDirective
} from "@syncfusion/ej2-vue-navigations";
```

```
export default {  
  name: "App",  
  components: {  
    "ejs-accordion": AccordionComponent,  
    "e-accordionitems": AccordionItemsDirective,  
    "e-accordionitem": AccordionItemDirective  
  }  
}  
</script>
```

2.Add the component definition in template section.

```
`html  
<template>  
  <ejs-accordion>  
    <e-accordionitems>  
      <e-accordionitem expanded="true" header="ASP.NET"  
        content="Microsoft ASP.NET is a set of technologies in the Microsoft .NET Framework for building Web  
        applications and XML Web services."></e-accordionitem>  
      <e-accordionitem header="ASP.NET MVC"  
        content="The Model-View-Controller (MVC) architectural pattern separates an application into three  
        main components: the model, the view, and the controller."></e-accordionitem>  
      <e-accordionitem header="JavaScript"  
        content="JavaScript (JS) is an interpreted computer programming language.It was originally  
        implemented as part of web browsers so that client-side scripts could interact with the user, control the  
        browser, communicate asynchronously, and alter the document content that was displayed."></e-  
        accordionitem>  
    </e-accordionitems>  
  </ejs-accordion>  
</template>  
`
```

Here is the summarized code for the above steps in the **src/App.vue** file:

#### **COMPOSITION API (~SRC/APP.VUE)**

```
<template>  
<ejs-accordion>  
<e-accordionitems>  
<e-accordionitem expanded="true" header="ASP.NET"  
  content="Microsoft ASP.NET is a set of technologies in the Microsoft .NET  
  Framework for building Web applications and XML Web services."></e-  
  accordionitem>  
<e-accordionitem header="ASP.NET MVC"  
  content="The Model-View-Controller (MVC) architectural pattern separates an  
  application into three main components: the model, the view, and the  
  controller."></e-accordionitem>
```

```
<e-accordionitem header="JavaScript"
content="JavaScript (JS) is an interpreted computer programming language.It
was originally implemented as part of web browsers so that client-side
scripts could interact with the user, control the browser, communicate
asynchronously, and alter the document content that was displayed."></e-
accordionitem>
</e-accordionitems>
</ejs-accordion>
</template>
<script setup>
import {
AccordionComponent as EjsAccordion, AccordionItemsDirective as
EAccordionitems, AccordionItemDirective as EAccordionitem
} from "@syncfusion/ej2-vue-navigations";
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
navigations/styles/material.css";
</style>
```

### OPTIONS API (~SRC/APP.VUE)

```
<template>
<ejs-accordion>
<e-accordionitems>
<e-accordionitem expanded="true" header="ASP.NET"
content="Microsoft ASP.NET is a set of technologies in the Microsoft .NET
Framework for building Web applications and XML Web services."></e-
accordionitem>
<e-accordionitem header="ASP.NET MVC"
content="The Model-View-Controller (MVC) architectural pattern separates an
application into three main components: the model, the view, and the
controller."></e-accordionitem>
<e-accordionitem header="JavaScript"
content="JavaScript (JS) is an interpreted computer programming language.It
was originally implemented as part of web browsers so that client-side
scripts could interact with the user, control the browser, communicate
asynchronously, and alter the document content that was displayed."></e-
accordionitem>
</e-accordionitems>
</ejs-accordion>
</template>
<script>
import {
AccordionComponent,
AccordionItemsDirective,
AccordionItemDirective,
} from "@syncfusion/ej2-vue-navigations";
export default {
name: "App",
components: {
"ejs-accordion": AccordionComponent,
"e-accordionitems": AccordionItemsDirective,
"e-accordionitem": AccordionItemDirective,
}
}
```

```

}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
navigations/styles/material.css";
</style>

```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run dev
```

```
,
```

or

```
`bash
```

```
yarn run dev
```

```
,
```

The output will appear as follows:

Refer the sample [Vue 3 using Composition API Accordion getting started](#)

For migrating from Vue 2 to Vue 3, refer to the [migration](#) documentation.

### Expand mode in Vue Accordion component

The Accordion supports the two listed types of expand modes while expanding or collapsing the item.

- Single
- Multiple

#### Single

The property enables to expand only one Accordion item at a time. If you expand any new item, the previously expanded one is collapsed and

new item changed to expanded state.

#### **APP.VUE**

```
<template>
```

```

<div id="app">
  <ejs-accordion expandMode='Single'>
    <e-accordionitems>
      <e-accordionitem expanded='true' header='ASP.NET' content='Microsoft
ASP.NET is a set of technologies in the Microsoft .NET Framework for
building Web applications and XML Web services.'></e-accordionitem>
      <e-accordionitem header='ASP.NET MVC' content='The Model-View-
Controller (MVC) architectural pattern separates an application into three
main components: the model, the view, and the controller.'></e-
accordionitem>
      <e-accordionitem header='JavaScript' content='JavaScript (JS) is an
interpreted computer programming language.It was originally implemented as
part of web browsers so that client-side scripts could interact with the
user, control the browser, communicate asynchronously, and alter the
document content that was displayed.'></e-accordionitem>
    </e-accordionitems>
  </ejs-accordion>
</div>
</template>
<script>
import Vue from 'vue';
import { AccordionPlugin } from '@syncfusion/ej2-vue-navigations';
Vue.use(AccordionPlugin);
export default {
  name: 'app',
}
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-vue-
navigations/styles/material.css";
</style>

```

{% previewsample "page.domainurl/code-snippet/accordion/expandmode/single-cs1" %}

## Multiple

Default expand mode of the Accordion is **Multiple**. It enables you to expand more than one Accordion item at a time. Expand/collapse action

can also be toggled by clicking on it again. For example, expanded item is collapsed when you click on it again.

## APP.VUE

```

<template>
  <div id="app">
    <ejs-accordion expandMode='Multiple'>
      <e-accordionitems>
        <e-accordionitem expanded='true' header='ASP.NET' content='Microsoft
ASP.NET is a set of technologies in the Microsoft .NET Framework for
building Web applications and XML Web services.'></e-accordionitem>
        <e-accordionitem header='ASP.NET MVC' content='The Model-View-
Controller (MVC) architectural pattern separates an application into three
main components: the model, the view, and the controller.'></e-
accordionitem>
      </e-accordionitems>
    </ejs-accordion>
  </div>
</template>

```

```

        <e-accordionitem header='JavaScript' content='JavaScript (JS) is an
        interpreted computer programming language.It was originally implemented as
        part of web browsers so that client-side scripts could interact with the
        user, control the browser, communicate asynchronously, and alter the
        document content that was displayed.'></e-accordionitem>
    </e-accordionitems>
</ejs-accordion>
</div>
</template>
<script>
import Vue from 'vue';
import { AccordionPlugin } from '@syncfusion/ej2-vue-navigations';
Vue.use(AccordionPlugin);
export default {
    name: 'app',
}
</script>
<style>
    @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
    @import "../node_modules/@syncfusion/ej2-vue-
    navigations/styles/material.css";
</style>

```

{% previewsample "page.domainurl/code-snippet/accordion/expandmode/multiple-cs1" %}

## Accessibility in Vue Accordion component

The Accordion component has been designed keeping in mind the [WAI-ARIA](#) specifications, by applying the prompt WAI-ARIA roles, states, and properties along with the keyboard support. Thus, making it usable for people who use assistive WAI-ARIA Accessibility supports that is achieved through the attributes like `aria-labelledby`. It helps to provides information about the elements in a document for assistive technology. The component implements the keyboard navigation support by following the [WAI-ARIA practices](#) and tested in major screen readers.

The accessibility compliance for the Accordion component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2](#) Support |  |

| [Section 508](#) Support |  |

| Screen Reader Support |  |

| Right-To-Left Support |  |

| Color Contrast |  |

| Mobile Device Support |  |

| Keyboard Navigation Support |  |

| [Accessibility Checker](#) Validation |  |

| [Axe-core](#) Accessibility Validation |  |

<style>

.post .post-content img {

display: inline-block;

margin: 0.5em 0;

}

</style>

<div> - All features of the component meet the requirement.</div>

<div> - Some features of the component do not meet the requirement.</div>

<div> - The component does not meet the requirement.</div>

## ARIA attributes

### | Roles and Attributes | Functionalities

|

| ----- | ----- |

| role | **Button:** Attribute is set to the Accordion header elements to indicate that the element can be used to toggle the visibility of the associated content section, describing the actual role of the element.<br> **Region:** Attribute is set to the Accordion panel elements to create a landmark region that contains the currently expanded accordion panel, describing the actual role of the element. <br>|

| aria-labelledby | Attribute is set to content (panel) and it points to the corresponding Accordion header. |

| aria-controls | Attribute is set to the header and it points to the corresponding Accordion content. |

| aria-expanded | Attribute is set to the Accordion header elements to indicates the expand state of the Accordion Item. Default value of this attribute is `false`. If an item is expanded, the attribute value changes to 'true'. |

| aria-selected | Attribute set to the Tab items to indicates the selection state for Tab items. Active Tab is set to true for this attribute. |

| **aria-hidden** | Attribute is set to the Accordion panel elements to indicates the content visible state of the Accordion Item. Default value of this attribute is **true**. If an item content is visible, the attribute value changes to **false**. |

| **aria-disabled** | It indicates the disabled state of the Accordion and its items. |

### Keyboard interaction

Keyboard navigation is enabled by default. Possible keys are:

Key	Description
-----	-----
Space or Enter	When focus is on the Accordion header, click on the focused element makes the element to expand and collapse.
Down Arrow	Focus the next Accordion header.
Up Arrow	Focus the previous Accordion header.
Home	Focus the first Accordion header.
End	Focus the last Accordion header.
Tab	To Move focus through the interactive elements.
Shift + Tab	To Move focus through the interactive elements.

### Ensuring accessibility

The Accordion component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Accordion component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Accordion component with accessibility tools.

```
{% previewsample "https://ej2.syncfusion.com/accessibility/accordion.html" %}
```

See also

- [Accessibility in Syncfusion Vue components](#)

### Style in Vue Accordion component

The following content provides the exact CSS structure that can be used to modify the control's appearance based on user preference.

### Customizing Accordion

Use the following CSS to customize the Accordion.

```
`css
.e-accordion {
border: 5px solid rgb(173, 255, 47);
}
`
```

### Customizing the list items

Use the following CSS to customize the items of Accordion.

```
`css
.e-accordion .e-acrdn-item {
text-align: center;
color: pink;
background-color: #2fa1ff;
}
`
```

### Customizing Accordion's header

Use the following CSS to customize the header of Accordion control.

```
`css
.e-accordion .e-acrdn-item.e-select > .e-acrdn-header {
background: #2fa1ff !important;
justify-content: center;
}
`
```

### Customizing Accordion's expand and collapse icons

Use the following CSS to customize the expand and collapse icons of Accordion control.

```
`css
.e-accordion .e-acrdn-item .e-acrdn-header .e-toggle-icon .e-icons {
color: pink;
}
`
```

### Customizing the hover state of Accordion control

Use the following CSS to customize the accordion item when hovering.

```
`css
.e-accordion .e-acrdn-item .e-acrdn-header:hover {
border: 2px solid gray;
}
`
```

### Customizing selected item of Accordion control

Use the following CSS to customize the selected accordion item.

```
`css
```

```
.e-accordion .e-acrdn-item.e-select.e-active>.e-acrdn-header,
.e-accordion .e-acrdn-item.e-select.e-item-focus>.e-acrdn-header {
background-color: rgb(0, 15, 100) !important;
}
`
```

Use the following CSS to customize the selected accordion item text.

```
`css
.e-accordion .e-acrdn-item.e-select.e-active>.e-acrdn-header .e-acrdn-header-content,
.e-accordion .e-acrdn-item.e-select.e-item-focus>.e-acrdn-header .e-acrdn-header-content {
color: #2fa1ff !important;
}
`
```

## How To

Set the nested accordion in [Vue Accordion component](#)

Accordion supports to render **nested** level of Accordion by using content property. You can give nested Accordion content inside the parent Accordion content property by using **id** of nested element. The nested Accordion can be rendered with the use of provided events, such as **clicked** and **expanding**.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-accordion ref="Accordion_Nested" :expanding="expanding">
      <e-accordionitems>
        <e-accordionitem expanded='true' header='Video' content='<div
id="nested_video"></div>'>
        </e-accordionitem>
        <e-accordionitem header='Music' content='<div
id="nested_music"></div>' ></e-accordionitem>
        <e-accordionitem header='Images' content='<div
id="nested_images"></div>'></e-accordionitem>
      </e-accordionitems>
    </ejs-accordion>
  </div>
</template>
<script>
import Vue from 'vue';
import { AccordionPlugin } from '@syncfusion/ej2-vue-navigations';
import { ExpandEventArgs, Accordion, AccordionClickArgs } from
 '@syncfusion/ej2-navigations';
Vue.use(AccordionPlugin);
export default {
  name: 'app',
  data () {
  },
  methods: {
    clicked: function (e) {
```

```

var ele = e.originalEvent.target;
if (ele.querySelectorAll('.e-accordion').length > 0) {
    return;
}
var nestAcrdn_musNew = new Accordion({
    items: [{
        header: 'New Track1'
    },
    {
        header: 'New Track2'
    }
    ],
    '#nested_musicNew');
}

expanding: function (e) {
var obj = this.$refs.Accordion_Nested.ej2Instances
if (e.isExpanded && [].indexOf.call(obj.items, e.item) === 0) {
    if (e.element.querySelectorAll('.e-accordion').length > 0) {
        return;
    }
    var nestAcrdn_vid = new Accordion({
        items: [{
            header: 'Video Track1'
        },
        {
            header: 'Video Track2'
        }
        ],
        '#nested_video');
    }
if (e.isExpanded && [].indexOf.call(obj.items, e.item) === 1) {
    if (e.element.querySelectorAll('.e-accordion').length > 0) {
        return;
    }
    var nestAcrdn_mus = new Accordion({
        clicked: this.clicked,
        items: [{
            header: 'Music Track1'
        },
        {
            header: 'Music Track2'
        },
        {
            header: 'Music New',
            content: '<div id="nested_musicNew"></div>'
        }
        ],
        '#nested_music');
    }
if (e.isExpanded && [].indexOf.call(obj.items, e.item) === 2) {
    if (e.element.querySelectorAll('.e-accordion').length > 0) {
        return;
    }
    var nestAcrdn_img = new Accordion({
        items: [{
            header: 'Track1'
        },

```

```

        {
            header: 'Track2'
        },
    ],
    }, '#nested_images');
}
}
}
</script>
<style>
    @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
    @import "../node_modules/@syncfusion/ej2-vue-
    navigations/styles/material.css";
</style>

```

{% previewsample "page.domainurl/code-snippet/accordion/how-to/nestedaccordion-cs1" %}

### Load content through post in Vue Accordion component

Accordion supports to load external contents through **AJAX** library. Refer the below steps.

- Import the **Ajax** module from **ej2-base** and initialize with URL path.
- Get data from the Ajax Success event to initialize Accordion with retrieved external path data.

### APP.VUE

```

<template>
    <div id="app">
        <div id="acrdnContnet1" style="display:none">

### Set custom animation in Vue Accordion component

Accordion supports custom animations for both expand and collapse actions from the provided animation option of **Animation** library.

Default animation is given as **SlideDown** for expanding the panel and **SlideUp** for collapsing the panel. You can also disable the animation by setting animation effect as **none**.

The sample demonstrates some types of animation that suits for Accordion. You can check all the animation effects [here](#).

### APP.VUE

```

To keep single pane open always in Vue Accordion component

By default, all Accordion panels are collapsible. You can customize the Accordion to keep one panel as expanded state always. This is applicable for **Single** expand mode.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accordion ref="element" expandMode='Single' :expanding="beforeExpand"

Create wizard using accordion in Vue Accordion component

Accordion items can be disabled dynamically by passing the index and boolean value with the [enableItem](#) method.

The below Wizard sample is designed for Online Shopping model. In this, each Accordion item is integrated with required components to fill

the details and designed for getting user details and making payment at the end. Each field is provided with validation for all mandatory

option to enable/disable to next Accordion.

            expiry.value !== "" &&
            cvv.value !== ""
        ) {
            if (this.checkCardNo(cardNo.value)) {
                if (this.checkCVV(cvv.value)) {
                    this.$refs.alertDlg.ej2Instances.content =
                        "Your payment successfully processed";
                    this.$refs.alertDlg.ej2Instances.show();
                }
            }
            document.getElementById("err3").classList.remove("show");
        } else {
            document.getElementById("err3").classList.add("show");
        }
    };
}
},
},
};
</script>
<style>

Load accordion with data source in Vue Accordion component

You can bind any data object to Accordion items, by mapping it to [header](#) and [content](#) property.

In the below demo, Data is fetched from an OData service using **DataManager**. The result data is formatted as a JSON object with **header** and **content** fields, which is set to items property of Accordion.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-accordion ref="accordionInc">
    </ejs-accordion>
  </div>
</template>
<script>
import Vue from 'vue';
import { AccordionPlugin } from '@syncfusion/ej2-vue-navigations';
import { DataManager, Query, ODataV4Adaptor, ReturnOption } from
 '@syncfusion/ej2-data';
Vue.use(AccordionPlugin);
export default {
  name: 'app',
  data() {
  }, mounted() {
    new DataManager({ url:
'https://services.odata.org/V4/Northwind/Northwind.svc/Employees', adaptor:
new ODataV4Adaptor })
```

```

        .executeQuery(new Query().range(4, 7)).then((e) => {
            var result = e.result;
            var obj = this.$refs.accordionInc.ej2Instances
            var itemsData = [];
            var mapping = { header: 'FirstName', content: 'Notes' };
            for (var i = 0; i < result.length; i++) {
                itemsData.push({ header: result[i][mapping.header], content:
result[i][mapping.content] });
            }
            obj.items = itemsData;
            obj.refresh();
        });
    }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
navigations/styles/material.css";
</style>

```

{% previewsample "page.domainurl/code-snippet/accordion/how-to/accordion-datasource-cs1" %}

### Customize expand collapse actions in Vue Accordion component

Accordion component supports customizing the expand or collapse animation action behavior. You can manually change the expand animation action performed after the collapse animation operation performed on already expand pane when the expand icons are clicked.

By default, the Accordion component pane is expanded or collapsed, when click the expand or collapse icon. It is not affected on already expand pane.

The following sample demonstrates, how to expand the collapsed Accordion item after collapse animation performed on the expanded Accordion item using [created](#), [expanding](#), and [expanded](#) event. In the Expanding event, get the previously expanded item index and prevent the expanding behavior using `args.cancel` option. Expand the Accordion item dynamically based on specifying the `index` value using the [expandItem](#) public method and [expanded](#) event.

### APP.VUE

```

<template>
    <div id="app">
        <ejs-accordion ref="acrdnInstance" expandMode='Single'
:expanding="expanding" :expanded="expanded" :created="created" >
            <e-accordionitems>
                <e-accordionitem header='ASP.NET' :content='content0'></e-
accordionitem>
                <e-accordionitem header='ASP.NET MVC' :content='content1'></e-
accordionitem>
                <e-accordionitem header='JavaScript' :content='content2'></e-
accordionitem>
            </e-accordionitems>
        </ejs-accordion>
    </div>
</template>
<script>
import Vue from 'vue';

```

```
import { AccordionPlugin } from '@syncfusion/ej2-vue-navigations';
import { ExpandEventArgs, Accordion } from '@syncfusion/ej2-navigations';
Vue.use(AccordionPlugin);
export default {
  name: 'app',
  data: function() {
    return {
      content0: 'ASP.NET is an open-source server-side web application
framework designed for web development to produce ' +
'dynamic web pages. It was developed by Microsoft to allow
programmers to build dynamic web sites, web applications ' +
'and web services. It was first released in January 2002 with
version 1.0 of the .NET Framework, and is the successor ' +
'to Microsoft\'\'s Active Server Pages (ASP) technology. ASP.NET is
built on the Common Language Runtime (CLR), allowing ' +
'programmers to write ASP.NET code using any supported .NET
language. The ASP.NET SOAP extension framework allows ' +
'ASP.NET components to process SOAP messages.',
      content1: 'The ASP.NET MVC is a web application framework developed
by Microsoft, which implements the ' +
'model-view-controller (MVC) pattern. It is open-source software,
apart from the ASP.NET Web Forms component which is ' +
'proprietary. In the later versions of ASP.NET, ASP.NET MVC, ASP.NET
Web API, and ASP.NET Web Pages (a platform using ' +
'only Razor pages) will merge into a unified MVC 6.The project is
called ASP.NET vNext.',
      content2: 'JavaScript (JS) is an interpreted computer programming
language. It was originally implemented as ' +
'part of web browsers so that client-side scripts could interact
with the user, control the browser, communicate ' +
'asynchronously, and alter the document content that was
displayed.[5] More recently, however, it has become common in ' +
'both game development and the creation of desktop applications.',
    };
  },
  mounted: function() {
    this.initialLoad = true;
    this.isCollapsed = false;
    this.expandIndex;
  },
  methods: {

        obj.expandItem(true, this.expandIndex);
        this.isCollapsed = false;
      }
    }
    expanding: function (e) {
      var obj = this.$refs.acrdnInstance.ej2Instances;
      if (e.isExpanded && !this.initialLoad && !this.isCollapsed) {
        e.cancel = true;
        this.expandIndex = obj.items.indexOf(e.item);
        this.isCollapsed = true;
      }
    }
  }
  created: function (e) {
```

```

        this.initialLoad = false;
    }
}
</script>
<style>
    @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
    @import "../node_modules/@syncfusion/ej2-vue-
    navigations/styles/material.css";
</style>

```

{% previewsample "page.domainurl/code-snippet/accordion/accordion-actions-cs1" %}

Render other components in accordion using template in Vue Accordion component

You can render other components inside Accordion using Vue **template**. Through this, we can add content as other components directly with all functionalities to our Accordion. Follow the below guidelines for using the other components as template in Accordion.

- Declare a template in the **template** section of the “.vue” file. An empty object “data” needs to be initialized in the data option of the default export object in **script** section.
- The template function needs to be assigned to the content property of the EJ2 Vue Accordion Component.

## APP.VUE

```

<template>
    <div id="app">
        <ejs-accordion >
            <e-accordionitems>
                <e-accordionitem expanded='true' header='Calendar'
:content='Template1'></e-accordionitem>
                <e-accordionitem header='DatePicker' :content='Template2'></e-
accordionitem>
                <e-accordionitem header='Numeric Textbox' :content='Template3'></e-
accordionitem>
            </e-accordionitems>
        </ejs-accordion>
    </div>
</template>
<script>
import Vue from 'vue';
import { AccordionPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(AccordionPlugin);
import { DatePickerComponent, CalendarComponent,
DatePickerPlugin, CalendarPlugin } from '@syncfusion/ej2-vue-calendars';
Vue.use(DatePickerPlugin);
Vue.use(CalendarPlugin);
import { NumericTextBoxComponent, NumericTextBoxPlugin } from
"@syncfusion/ej2-vue-inputs";
Vue.use(NumericTextBoxPlugin);
export default {
    name: 'app',
    data: function() {
        return {

```

```

    Template1: function () {
      return {
        template: Vue.component('CalendarComponent', {
          template: '<ejs-calendar></ejs-calendar>',
          data() { return { }; }
        })
      }
    },
    Template2: function () {
      return {
        template: Vue.component('DatePickerComponent', {
          template: ' <ejs-datepicker :min="minDate" :max="maxDate"
:value="dateVal" ></ejs-datepicker>',
          data() { return { minDate : new Date("05/09/2017"),
                           maxDate : new Date("05/15/2017"),
                           dateVal : new Date("05/11/2017") }; }
        })
      }
    },
    Template3: function () {
      return {
        template: Vue.component('NumericTextBoxComponent', {
          template: '<ejs-numerictextbox value="100"></ejs-
numerictextbox>',
          data() { return { }; }
        })
      }
    }
  }
}
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-vue-buttons/styles/material.css";

## Accumulation Chart

### Getting Started with the Vue Accumulation chart Component in Vue 2

This article provides a step-by-step guide for setting up a Vue 2 project using [Vue-CLI](#) and integrating the Syncfusion Vue Accumulation chart component

#### Prerequisites

[System requirements for Syncfusion Vue UI components](#)

### Dependencies

The list of minimum dependencies required to use an accumulation chart are follows:

```
`javascript
|-- @syncfusion/ej2-vue-charts
|-- @syncfusion/ej2-base
|-- @syncfusion/ej2-data
|-- @syncfusion/ej2-pdf-export
|-- @syncfusion/ej2-file-utils
|-- @syncfusion/ej2-compression
|-- @syncfusion/ej2-charts
|-- @syncfusion/ej2-vue-base
|-- @syncfusion/ej2-svg-base
`,`
```

### Setting up the Vue 2 project

To generate a Vue 2 project using Vue-CLI, use the [vue create](#) command. Follow these steps to install Vue CLI and create a new project:

```
`bash
npm install -g @vue/cli
vue create quickstart
cd quickstart
npm run serve
`,`
```

or

```
`bash
yarn global add @vue/cli
vue create quickstart
cd quickstart
yarn run serve
`,`
```

When creating a new project, choose the option **Default ([Vue 2] babel, eslint)** from the menu.

```
E:\samples>vue create quickstart

Vue CLI v5.0.8
? Please pick a preset:
  Default ([Vue 3] babel, eslint)
> Default ([Vue 2] babel, eslint)
  Manually select features
```

Once the `quickstart` project is set up with default settings, proceed to add Syncfusion components to the project.

#### Add Syncfusion Vue packages

Syncfusion packages are available at [npmjs.com](https://www.npmjs.com). To use Vue components, install the required npm package.

This article uses the `Vue Accumulation chart component` as an example. Install the `@syncfusion/ej2-vue-charts` package by running the following command:

```
`bash
```

```
npm install @syncfusion/ej2-vue-charts --save
```

```
,
```

or

```
`bash
```

```
yarn add @syncfusion/ej2-vue-charts
```

```
,
```

The `--save` will instruct NPM to include the chart package inside of the `dependencies` section of the `package.json`.

#### Add Syncfusion Vue component

Follow the below steps to add the Vue Accumulation chart component using `Composition API` or `Options API`:

1\ First, import and register the Accumulation chart component in the `script` section of the `src/App.vue` file.

#### ~/SRC/APP.VUE

```
<script>
import { AccumulationChartComponent, AccumulationSeriesCollectionDirective,
AccumulationSeriesDirective, PieSeries } from "@syncfusion/ej2-vue-charts";
export default {
  components: {
    'ejs-accumulationchart': AccumulationChartComponent,
    'e-accumulation-series-collection': AccumulationSeriesCollectionDirective,
    'e-accumulation-series': AccumulationSeriesDirective
  }
}
</script>
```

2\ In the `template` section, define the Accumulation chart component with the `dataSource` property.

**~/SRC/APP.VUE**

```
<template>
<div id="app">
  <ejs-accumulationchart id="container">
    <e-accumulation-series-collection>
      <e-accumulation-series :dataSource='seriesData' xName='x' yName='y'> </e-accumulation-series>
    </e-accumulation-series-collection>
  </ejs-accumulationchart>
</div>
</template>
```

3\ Declare the value for the `dataSource` property in the `script` section.

**~/SRC/APP.VUE**

```
<script>
data() {
  return {
    seriesData: data
  };
}
</script>
```

### Adding Chart Component

- Add the Vue Chart by using selector in section of the `App.vue` file.

The below example shows a basic Charts,

- Pie Series

By default pie series will be rendered on assigning JSON data to the series by using `dataSource` property. Map the field names in the JSON data to the `xName` and `yName` properties of the series.

**~/SRC/APP.VUE**

```
<template>
  <div id="app">
    <ejs-accumulationchart id="container">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import { AccumulationChartComponent, AccumulationSeriesCollectionDirective,
AccumulationSeriesDirective, PieSeries } from "@syncfusion/ej2-vue-charts";
```

```
import { data } from "data.ts";
export default {
  components: {
    'ejs-accumulationchart': AccumulationChartComponent,
    'e-accumulation-series-collection':
      AccumulationSeriesCollectionDirective,
    'e-accumulation-series': AccumulationSeriesDirective
  },
  data() {
    return {
      seriesData: data
    };
  },
  provide: {
    accumulationchart: [PieSeries]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>
```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs9" %}

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run serve
```

```
,
```

or

```
`bash
```

```
yarn run serve
```

```
,
```

### Getting Started with the Vue Accumulation Chart Component in Vue 3

This article provides a step-by-step guide for setting up a [Vite](#) project with a JavaScript environment and integrating the Syncfusion Vue Accumulation Chart component using the [Composition API](#) / [Options API](#).

The **Composition API** is a new feature introduced in Vue.js 3 that provides an alternative way to organize and reuse component logic. It allows developers to write components as functions that use smaller, reusable functions called composition functions to manage their properties and behavior.

The **Options API** is the traditional way of writing Vue.js components, where the component logic is organized into a series of options that define the component's properties and behavior. These options include data, methods, computed properties, watchers, lifecycle hooks, and more.

### Prerequisites

[System requirements for Syncfusion Vue UI components](#)

### Set up the Vite project

A recommended approach for beginning with Vue is to scaffold a project using [Vite](#). To create a new Vite project, use one of the commands that are specific to either NPM or Yarn.

```
`bash
npm create vite@latest
`
```

or

```
`bash
yarn create vite
`
```

Using one of the above commands will lead you to set up additional configurations for the project as below:

1. Define the project name: We can specify the name of the project directly. Let's specify the name of the project as `my-project` for this article.

```
`bash
? Project name: » my-project
`
```

2. Select `Vue` as the framework. It will create a Vue 3 project.

```
`bash
? Select a framework: » - Use arrow-keys. Return to submit.
```

Vanilla

Vue

React

Preact

Lit

Svelte

Others

`

3. Choose `JavaScript` as the framework variant to build this Vite project using JavaScript and Vue.

```
`bash
? Select a variant: » - Use arrow-keys. Return to submit.
```

JavaScript

TypeScript

Customize with create-vue ↗

Nuxt ↗

,

4. Upon completing the aforementioned steps to create the `my-project`, run the following command to install its dependencies:

```
`bash
```

```
cd my-project
```

```
npm install
```

,

or

```
`bash
```

```
cd my-project
```

```
yarn install
```

,

Now that `my-project` is ready to run with default settings, let's add Syncfusion components to the project.

#### Add Syncfusion Vue packages

Syncfusion Vue component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion Vue components in the project, install the corresponding npm package.

This article uses the [Vue Accumulation Chart component](#) as an example. To use the Vue Accumulation Chart component in the project, the `@syncfusion/ej2-vue-charts` package needs to be installed using the following command:

```
`bash
```

```
npm install @syncfusion/ej2-vue-charts --save
```

,

or

```
`bash
```

```
yarn add @syncfusion/ej2-vue-charts
```

,

#### Add Syncfusion Vue component

Follow the below steps to add the Vue Accumulation Chart component using `Composition API` or `Options API`:

1. First, import and register the Accumulation Chart component and its child directives in the `script` section of the `src/App.vue` file. If you are using the `Composition API`, you should add the `setup` attribute to the `script` tag to indicate that Vue will be using the `Composition API`.

#### COMPOSITION API (~SRC/APP.VUE)

```
<script setup>
```

```
import { AccumulationChartComponent as EjsAccumulationchart,
AccumulationSeriesCollectionDirective as EAccumulationSeriesCollection,
AccumulationSeriesDirective as EAccumulationSeries, AccumulationLegend,
PieSeries, AccumulationTooltip } from "@syncfusion/ej2-vue-charts";
</script>
```

### OPTIONS API (~SRC/APP.VUE)

```
<script>
import { AccumulationChartComponent, AccumulationSeriesCollectionDirective,
AccumulationSeriesDirective, AccumulationLegend,
PieSeries, AccumulationTooltip } from "@syncfusion/ej2-vue-charts";
//Component registration
export default {
name: "App",
components: {
"ejs-accumulationchart": AccumulationChartComponent,
"e-accumulation-series-collection": AccumulationSeriesCollectionDirective,
"e-accumulation-series": AccumulationSeriesDirective
}
}
</script>
```

2. In the **template** section, define the Accumulation Chart component with the [dataSource](#) property.

### ~SRC/APP.VUE

```
<template>
<ejs-accumulationchart id="container" :legendSettings="legendSettings"
:tooltip="tooltip">
<e-accumulation-series-collection>
<e-accumulation-series :dataSource='data' xName='x' yName='y'
innerRadius="20%"> </e-accumulation-series>
</e-accumulation-series-collection>
</ejs-accumulationchart>
</template>
```

3. Declare the values for the **dataSource** property in the **script** section.

### COMPOSITION API (~SRC/APP.VUE)

```
<script setup>
const data = [
{ x: 'Argentina', y: 505370 },
{ x: 'Belgium', y: 551500 },
{ x: 'Cuba', y: 312685 },
{ x: 'Dominican Republic', y: 350000 },
{ x: 'Egypt', y: 301000 },
{ x: 'Kazakhstan', y: 300000 },
{ x: 'Somalia', y: 357022 }
];
const legendSettings = { visible: true };
const tooltip = { enable: true };
</script>
```

**OPTIONS API (~SRC/APP.VUE)**

```
<script>
data() {
  return {
    data: [
      { x: 'Argentina', y: 505370 },
      { x: 'Belgium', y: 551500 },
      { x: 'Cuba', y: 312685 },
      { x: 'Dominican Republic', y: 350000 },
      { x: 'Egypt', y: 301000 },
      { x: 'Kazakhstan', y: 300000 },
      { x: 'Somalia', y: 357022 }
    ],
    legendSettings: { visible: true },
    tooltip: {
      enable: true
    }
  };
}
</script>
```

Here is the summarized code for the above steps in the **src/App.vue** file:

**COMPOSITION API (~SRC/APP.VUE)**

```
<template>
<ejs-accumulationchart id="container" :legendSettings="legendSettings"
:tooltip="tooltip">
<e-accumulation-series-collection>
<e-accumulation-series :dataSource='data' xName='x' yName='y'
innerRadius="20%"> </e-accumulation-series>
</e-accumulation-series-collection>
</ejs-accumulationchart>
</template>
<script setup>
import { provide } from 'vue';
import { AccumulationChartComponent as EjsAccumulationchart,
AccumulationSeriesCollectionDirective as EAccumulationSeriesCollection,
AccumulationSeriesDirective as EAccumulationSeries, AccumulationLegend,
PieSeries, AccumulationTooltip } from "@syncfusion/ej2-vue-charts";
const data = [
  { x: 'Argentina', y: 505370 },
  { x: 'Belgium', y: 551500 },
  { x: 'Cuba', y: 312685 },
  { x: 'Dominican Republic', y: 350000 },
  { x: 'Egypt', y: 301000 },
  { x: 'Kazakhstan', y: 300000 },
  { x: 'Somalia', y: 357022 }
];
const legendSettings = { visible: true };
const tooltip = { enable: true };
const accumulationchart = [PieSeries, AccumulationLegend,
AccumulationTooltip];
provide('accumulationchart', accumulationchart);
</script>
```

**OPTIONS API (~SRC/APP.VUE)**

```

<template>
<ejs-accumulationchart id="container" :legendSettings="legendSettings"
:tooltip="tooltip">
<e-accumulation-series-collection>
<e-accumulation-series :dataSource='data' xName='x' yName='y'
innerRadius="20%"> </e-accumulation-series>
</e-accumulation-series-collection>
</ejs-accumulationchart>
</template>
<script>
import { AccumulationChartComponent, AccumulationSeriesCollectionDirective,
AccumulationSeriesDirective, AccumulationLegend,
PieSeries, AccumulationTooltip } from "@syncfusion/ej2-vue-charts";
//Component registration
export default {
name: "App",
components: {
"ejs-accumulationchart": AccumulationChartComponent,
"e-accumulation-series-collection": AccumulationSeriesCollectionDirective,
"e-accumulation-series": AccumulationSeriesDirective
},
data() {
return {
data: [
{ x: 'Argentina', y: 505370 },
{ x: 'Belgium', y: 551500 },
{ x: 'Cuba', y: 312685 },
{ x: 'Dominican Republic', y: 350000 },
{ x: 'Egypt', y: 301000 },
{ x: 'Kazakhstan', y: 300000 },
{ x: 'Somalia', y: 357022 }
],
legendSettings: { visible: true },
tooltip: {
enable: true
},
};
},
provide: {
accumulationchart: [ PieSeries, AccumulationLegend, AccumulationTooltip ]
},
};
</script>

```

**Run the project**

To run the project, use the following command:

```
`bash
```

```
npm run dev
```

```
,
```

or

```
`bash
```

```
yarn run dev
```

```
,
```

The output will appear as follows:

**Sample:** [vue-3-accumulation-chart-getting-started](#).

For migrating from Vue 2 to Vue 3, refer to the [migration](#) documentation.

Pie dough nut in Vue Accumulation chart component

Pie Chart

To render a pie series, use the series [type](#) as `Pie` and inject the `PieSeries` module into the `provide`. If the `PieSeries` module is not injected, this module will be loaded by default.

#### APP.VUE

```
<template>
  <div id="app">
    <ejs-accumulationchart id="container">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
```

```

import { AccumulationChartPlugin, PieSeries } from "@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3, fill: '#498fff', text: 'January' }, { x: 'Feb',
y: 3.5, fill: '#ffa060', text: 'February' },
        { x: 'Mar', y: 7, fill: '#ff68b6', text: 'March' }, { x: 'Apr',
y: 13.5, fill: '#81e2a1', text: 'April' }
      ]
    };
  },
  provide: {
    accumulationchart: [PieSeries]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs20" %}

### Radius Customization

By default, radius of the pie series will be 80% of the size (minimum of chart width and height).

You can customize this using [radius](#) property of the series.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' radius='90%'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries } from "@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3, fill: '#498fff', text: 'January' }, { x: 'Feb',
y: 3.5, fill: '#ffa060', text: 'February' },
        { x: 'Mar', y: 7, fill: '#ff68b6', text: 'March' }, { x: 'Apr',
y: 13.5, fill: '#81e2a1', text: 'April' }
      ]
    };
  }
};

```

```

    ]
    };
  },
  provide: {
    accumulationchart: [PieSeries]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs21" %}

### Pie Center

The center position of the pie can be changed by Center X and Center Y. By default, center value of the pie series x and y is 50%. You can customize this using [center](#) property of the series.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id='chartcontainer' :title='title'
      :legendSettings='legendSettings' :tooltip='tooltip'
      enableSmartLabels='true' :enableAnimation='enableAnimation'
      :center='center'>
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData'
          :startAngle='startAngle' :endAngle='endAngle' :radius='radius' xName='x'
          yName='y' :dataLabel='dataLabel' name='Browser' innerRadius='0%'> </e-
        accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, AccumulationTooltip, PieSeries,
  AccumulationDataLabel, AccumulationLegend } from "@syncfusion/ej2-vue-
  charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { 'x': 'Chrome', y: 37, text: '37%' }, { 'x': 'UC Browser', y: 17,
        text: '17%' },
        { 'x': 'iPhone', y: 19, text: '19%' },
        { 'x': 'Others', y: 4, text: '4%' }, { 'x': 'Opera', y: 11, text:
        '11%' },
        { 'x': 'Android', y: 12, text: '12%' }
      ],
      dataLabel: {
        visible: true,

```

```

        position: 'Inside', name: 'text',
        font: {
            fontWeight: '600'
        }
    },
    enableSmartLabels: true,
    enableAnimation: false,
    legendSettings: {
        visible: false,
    },
    tooltip: { enable: false, format: '${point.x} : <b>${point.y}%</b>' },
    startAngle: '0',
    endAngle: '360',
    radius: '70%',
    explodeOffset: '10%',
    explodeIndex : 0,
    center: {x: '50%', y: '50%'},
    title: "Mobile Browser Statistics"
    };
    },
    provide: {
        accumulationchart: [PieSeries, AccumulationDataLabel]
    }
    };
</script>
<style>
    #container {
        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs22" %}

### Various Radius Pie Chart

You can use radius mapping to render the slice with different [radius](#) pie and also use [border](#), fill properties to customize the point. dataLabel is used to represent individual data and its value.

### APP.VUE

```

<template>
    <div id="app">
        <ejs-accumulationchart id="container" ref="pie"
        style='display:block;' :legendSettings="legendSettings" :tooltip="tooltip"
        :enableAnimation='enableAnimation' :enableSmartLabels='enableSmartLabels' >
            <e-accumulation-series-collection>
                <e-accumulation-series :dataSource='data' xName='x'
                yName='y' :radius='radius' innerRadius="20%" :dataLabel="dataLabel"> </e-
                accumulation-series>
            </e-accumulation-series-collection>
        </ejs-accumulationchart>
    </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, AccumulationDataLabel, PieSeries } from
"@syncfusion/ej2-vue-charts";

```

```

Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      data:[
        { x: 'Argentina', y: 505370, r: '100' },
        { x: 'Belgium', y: 551500, r: '118.7' },
        { x: 'Cuba', y: 312685, r: '124.6' },
        { x: 'Dominican Republic', y: 350000, r: '137.5' },
        { x: 'Egypt', y: 301000, r: '150.8' },
        { x: 'Kazakhstan', y: 300000, r: '155.5' },
        { x: 'Somalia', y: 357022, r: '160.6' }
      ],
      radius: 'r',
      legendSettings: { visible: true },
      dataLabel: { visible: true, position: 'Outside', name: 'x' },
      tooltip: {
        enable: true, header: '<b>${point.x}</b>', format: 'Composition:
        <b>${point.y}</b>'
      },
      enableAnimation: true,
      enableSmartLabels: true
    };
  },
  provide: {
    accumulationchart: [PieSeries, AccumulationDataLabel]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs23" %}

### Doughnut Chart

To achieve a doughnut in pie series, customize the [innerRadius](#) property of the series. By setting value greater than 0%, a doughnut will appear. The innerRadius property takes value from 0% to 100% of the pie radius.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
        yName='y' innerRadius='40%'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";

```

```

import { AccumulationChartPlugin, PieSeries } from "@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3, fill: '#498fff', text: 'January' }, { x: 'Feb',
y: 3.5, fill: '#ffa060', text: 'February' },
        { x: 'Mar', y: 7, fill: '#ff68b6', text: 'March' }, { x: 'Apr',
y: 13.5, fill: '#81e2a1', text: 'April' }
      ]
    };
  },
  provide: {
    accumulationchart: [PieSeries]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs24" %}

### Start and End angles

You can customize the start and end angle of the pie series using the [startAngle](#) and [endAngle](#) properties. The default value of [startAngle](#) is 0 degree, and [endAngle](#) is 360 degrees. By customizing this, you can achieve a semi pie series.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' startAngle=270 endAngle=90> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries } from "@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3, fill: '#498fff', text: 'January' }, { x: 'Feb',
y: 3.5, fill: '#ffa060', text: 'February' },

```

```

        { x: 'Mar', y: 7, fill: '#ff68b6', text: 'March' }, { x: 'Apr',
y: 13.5, fill: '#81e2a1', text: 'April' }
    ]
    };
  },
  provide: {
    accumulationchart: [PieSeries]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs25" %}

### Color and Text Mapping

The fill color and the text in the data source can be mapped to the chart using `pointColorMapping` in series and `name` in `datalabel` respectively.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' :dataLabel='datalabel' :pointColorMapping=' pointColorMapping'>
      </e-accumulation-series>
    </e-accumulation-series-collection>
  </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationDataLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3, fill: '#498fff', text: 'January' }, { x:
'Feb', y: 3.5, fill: '#ffa060', text: 'February' },
        { x: 'Mar', y: 7, fill: '#ff68b6', text: 'March' }, { x:
'Apr', y: 13.5, fill: '#81e2a1', text: 'April' }
      ],
      datalabel: { visible: true, name: 'text' },
      pointColorMapping: 'fill'
    };
  },
  provide: {
    accumulationchart: [PieSeries, AccumulationDataLabel]
  }
}

```

```
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>
```

```
{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs26" %}
```

### Multi-level pie chart

You can achieve a multi-level drill down in pie and doughnut charts using [pointClick](#) event. If user clicks any point in the chart, that corresponding data will be shown in the next level and so on based on point clicked.

You can also achieve drill-up (back to the initial state) by using [chartMouseClicked](#) event. In below sample, you can drill-up by clicking back button in the center of the chart.

### APP.VUE

```
<template>
  <div id="app">
    <div>
      <div id="link">
        <a id="category" @click="onClick" style="visibility:hidden;

### Pyramid in Vue Accumulation chart component

To render a pyramid series, use the series [type](#) as **Pyramid** and inject **PyramidSeries** module into the **provide**.

#### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData'
type='Pyramid' xName='x' yName='y'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PyramidSeries } from "@syncfusion/ej2-vue-
charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {

```

```

    return {
      seriesData: [
        { x: 'Australia', y: 20, text: 'Australia 20%' },
        { x: 'France', y: 22, text: 'France 22%' },
        { x: 'China', y: 23, text: 'China 23%' },
        { x: 'India', y: 24, text: 'India 24%' },
        { x: 'Japan', y: 25, text: 'Japan 25%' },
        { x: 'Germany', y: 27, text: 'Germany 27%' }
      ]
    };
  },
  provide: {
    accumulationchart: [PyramidSeries]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pyramid-cs1" %}

### Mode

The Pyramid chart supports linear and surface modes of rendering. The default type of the `pyramidMode` is `linear`.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData'
type='Pyramid' xName='x' yName='y' pyramidMode='Surface'> </e-accumulation-
series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PyramidSeries } from "@syncfusion/ej2-vue-
charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Australia', y: 20, text: 'Australia 20%' },
        { x: 'France', y: 22, text: 'France 22%' },
        { x: 'China', y: 23, text: 'China 23%' },
        { x: 'India', y: 24, text: 'India 24%' },
        { x: 'Japan', y: 25, text: 'Japan 25%' },
        { x: 'Germany', y: 27, text: 'Germany 27%' }
      ]
    }
  }
}

```

```

    ];
  },
  provide: {
    accumulationchart: [PyramidSeries]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pyramid-cs2" %}

### Size

The size of the pyramid chart can be customized by using the **width** and **height** properties.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData'
type='Pyramid' xName='x' yName='y' width='60%' height='80%'> </e-
accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PyramidSeries } from "@syncfusion/ej2-vue-
charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Australia', y: 20, text: 'Australia 20%' },
        { x: 'France', y: 22, text: 'France 22%' },
        { x: 'China', y: 23, text: 'China 23%' },
        { x: 'India', y: 24, text: 'India 24%' },
        { x: 'Japan', y: 25, text: 'Japan 25%' },
        { x: 'Germany', y: 27, text: 'Germany 27%' }
      ]
    };
  },
  provide: {
    accumulationchart: [PyramidSeries]
  }
};
</script>
<style>

```

```
#container {
  height: 350px;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/chart/series/pyramid-cs3" %}

### Gap Between the Segments

Pyramid chart provides options to customize the space between the segments by using the `gapRatio` property of the series. It ranges from 0 to 1.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-accumulationchart id="container">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData'
type='Pyramid' xName='x' yName='y' :gapRatio='gapRatio'> </e-accumulation-
series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PyramidSeries } from "@syncfusion/ej2-vue-
charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Australia', y: 20, text: 'Australia 20%' },
        { x: 'France', y: 22, text: 'France 22%' },
        { x: 'China', y: 23, text: 'China 23%' },
        { x: 'India', y: 24, text: 'India 24%' },
        { x: 'Japan', y: 25, text: 'Japan 25%' },
        { x: 'Germany', y: 27, text: 'Germany 27%' }
      ],
      gapRatio: 0.08
    };
  },
  provide: {
    accumulationchart: [PyramidSeries]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>
```

{% previewsample "page.domainurl/code-snippet/chart/series/pyramid-cs4" %}

## Explode

Points can be exploded on mouse click by setting the `explode` property to true. You can also explode the point on load using `explodeIndex`. Explode distance can be set by using `explodeOffset` property.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-accumulationchart id="container">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData'
type='Pyramid' xName='x' yName='y' explode=true
        explodeOffset='10' :explodeIndex='explodeIndex'> </e-
accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PyramidSeries } from "@syncfusion/ej2-vue-
charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Australia', y: 20, text: 'Australia 20%' },
        { x: 'France', y: 22, text: 'France 22%' },
        { x: 'China', y: 23, text: 'China 23%' },
        { x: 'India', y: 24, text: 'India 24%' },
        { x: 'Japan', y: 25, text: 'Japan 25%' },
        { x: 'Germany', y: 27, text: 'Germany 27%' }
      ],
      explodeIndex:3
    };
  },
  provide: {
    accumulationchart: [PyramidSeries]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/chart/series/pyramid-cs5" %}

## Customization

Individual points can be customized using the `pointRender` event.

### APP.VUE

```
<template>
```

```

<div id="app">
  <ejs-accumulationchart id="container" :pointRender='onPointRender'>
    <e-accumulation-series-collection>
      <e-accumulation-series :dataSource='seriesData'
type='Pyramid' xName='x' yName='y'> </e-accumulation-series>
    </e-accumulation-series-collection>
  </ejs-accumulationchart>
</div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PyramidSeries } from "@syncfusion/ej2-vue-
charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Australia', y: 20, text: 'Australia 20%' },
        { x: 'France', y: 22, text: 'France 22%' },
        { x: 'China', y: 23, text: 'China 23%' },
        { x: 'India', y: 24, text: 'India 24%' },
        { x: 'Japan', y: 25, text: 'Japan 25%' },
        { x: 'Germany', y: 27, text: 'Germany 27%' }
      ]
    };
  },
  provide: {
    accumulationchart: [PyramidSeries]
  },
  methods: {
    onPointRender: function (args) {

        args.fill = '#f4bc42';
      }
      else {
        args.fill = '#597cf9';
      }
    }
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pyramid-cs6" %}

### Funnel in Vue Accumulation chart component

To render a funnel series, use the series [type](#) as `Funnel` and inject, the `FunnelSeries` module into the `provide`.

#### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData'
type='Funnel' xName='x' yName='y'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, FunnelSeries } from "@syncfusion/ej2-vue-
charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Renewed', y: 18.20, text: 'Renewed 18.20%' },
        { x: 'Subscribe', y: 27.3, text: 'Subscribe 27.3%' },
        { x: 'Support', y: 55.9, text: 'Support 55.9%' },
        { x: 'Downloaded', y: 76.8, text: 'Downloaded 76.8%' },
        { x: 'Visited', y: 100, text: 'Visited 100%' }
      ]
    };
  },
  provide: {
    accumulationchart: [FunnelSeries]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/funnel-cs1" %}

### Size

The size of the funnel chart can be customized by using the `width` and `height` properties.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData'
type='Funnel' xName='x' yName='y' width='60%' height='80%'> </e-
accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>

```

```

<script>
import Vue from "vue";
import { AccumulationChartPlugin, FunnelSeries } from "@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Renewed', y: 18.20, text: 'Renewed 18.20%' },
        { x: 'Subscribe', y: 27.3, text: 'Subscribe 27.3%' },
        { x: 'Support', y: 55.9, text: 'Support 55.9%' },
        { x: 'Downloaded', y: 76.8, text: 'Downloaded 76.8%' },
        { x: 'Visited', y: 100, text: 'Visited 100%' }
      ]
    };
  },
  provide: {
    accumulationchart: [FunnelSeries]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/funnel-cs2" %}

### Neck Size

The funnel's neck size can be customized by using the `neckWidth` and `neckHeight` properties.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData'
type='Funnel' xName='x' yName='y' :neckWidth='neckWidth'
:neckHeight='neckHeight'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, FunnelSeries } from "@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Renewed', y: 18.20, text: 'Renewed 18.20%' },

```

```

        { x: 'Subscribe', y: 27.3, text: 'Subscribe 27.3%' },
        { x: 'Support', y: 55.9, text: 'Support 55.9%' },
        { x: 'Downloaded', y: 76.8, text: 'Downloaded 76.8%' },
        { x: 'Visited', y: 100, text: 'Visited 100%' }
    ],
    neckWidth: '25%', neckHeight: '5%'
  };
},
provide: {
  accumulationchart: [FunnelSeries]
}
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/funnel-cs3" %}

### Gap between the segments

Funnel chart provides options to customize the space between the segments by using the `gapRatio` property of the series. It ranges from 0 to 1.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData'
type='Funnel' xName='x' yName='y' :gapRatio='gapRatio'> </e-accumulation-
series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, FunnelSeries } from "@syncfusion/ej2-vue-
charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Renewed', y: 18.20, text: 'Renewed 18.20%' },
        { x: 'Subscribe', y: 27.3, text: 'Subscribe 27.3%' },
        { x: 'Support', y: 55.9, text: 'Support 55.9%' },
        { x: 'Downloaded', y: 76.8, text: 'Downloaded 76.8%' },
        { x: 'Visited', y: 100, text: 'Visited 100%' }
      ],
      gapRatio: 0.08
    };
  },
};

```

```

    provide: {
      accumulationchart: [FunnelSeries]
    }
  };
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/funnel-cs4" %}

### Explode

Points can be exploded on mouse click by setting the **explode** property to true. You can also explode the point

on load using **explodeIndex**. Explode distance can be set by using **explodeOffset** property.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData'
type='Funnel' xName='x' yName='y' explode=true
        explodeOffset='10' :explodeIndex='explodeIndex'> </e-
accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, FunnelSeries } from "@syncfusion/ej2-vue-
charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Renewed', y: 18.20, text: 'Renewed 18.20%' },
        { x: 'Subscribe', y: 27.3, text: 'Subscribe 27.3%' },
        { x: 'Support', y: 55.9, text: 'Support 55.9%' },
        { x: 'Downloaded', y: 76.8, text: 'Downloaded 76.8%' },
        { x: 'Visited', y: 100, text: 'Visited 100%' }
      ],
      explodeIndex:3
    };
  },
  provide: {
    accumulationchart: [FunnelSeries]
  }
};
</script>

```

```
<style>
  #container {
    height: 350px;
  }
</style>
```

{% previewsample "page.domainurl/code-snippet/chart/series/funnel-cs5" %}

### Smart Data Label

It provides the data label smart arrangement of the funnel and pyramid series. The overlap data label will be placed on left side of the funnel/pyramid series.

### APP.VUE

```
<template>
  <div id="app">

  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/smartlabel-cs4" %}

### Datalabel template

Label content can be formatted by using the template option. Inside the template, you can add the placeholder text `${point.x}` and `${point.y}` to display corresponding data points x & y value. Using [template](#) property, you can set data label

template in chart.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container"
enableSmartLabels='enableSmartLabels'>
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' :dataLabel='datalabel'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>

```

```

    </div>
  </template>
  <script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationDataLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
        { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
        { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
        { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
        { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' } ],
      datalabel: { visible: true, name: 'text', position:
'Inside',
        template: "<div id='templateWrap' style='background-

<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/smartlabel-cs5" %}

### Connector Line

Connector line will be visible when the data label is placed outside the chart. The connector line can be customized using the type, color, width, length and dashArray properties

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container">
      <e-accumulation-series-collection>

```

```

        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' :dataLabel='datalabel'> </e-accumulation-series>
    </e-accumulation-series-collection>
</ejs-accumulationchart>
</div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationDataLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
    data() {
        return {
            seriesData: [
                { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
                { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
                { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
                { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
                { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' } ],
            datalabel: { visible: true, name: 'text', position:
'Outside',
connectorStyle:{
    //Length of the connector line in pixels
    length: '50px',
    //Width of the connector line in pixels
    width: 2,
    //dashArray of the connector line
    dashArray: '5,3',
    //Color of the connector line
    color: '#f4429e',
    //Specifies the type of the connector line either Line
or Curve
    type: 'Curve'
}
        };
    },
    provide: {
        accumulationchart: [PieSeries, AccumulationDataLabel]
    }
};
</script>
<style>
    #container {
        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/smartlabel-cs6" %}

### Text Mapping

The fill color and the text in the data source can be mapped to the chart using `pointColorMapping` in series and `name` in `datalabel` respectively.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-accumulationchart id="container">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' :dataLabel='datalabel'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationDataLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
        { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
        { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
        { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
        { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' } ],
      datalabel: { visible: true, name: 'text' }
    };
  },
  provide: {
    accumulationchart: [PieSeries, AccumulationDataLabel]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>
```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs7" %}

### Format

Data label for the accumulation chart can be formatted using `format` property. You can use the global formatting options, such as 'n', 'p', and 'c'.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' :dataLabel='datalabel'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationDataLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
        { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
        { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
        { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
        { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' } ],
      datalabel: { visible: true, format: 'n2' }
    };
  },
  provide: {
    accumulationchart: [PieSeries, AccumulationDataLabel]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs8" %}

Value	Format	Resultant Value	Description
1000	n1	1000.0	The number is rounded to 1 decimal place.
1000	n2	1000.00	The number is rounded to 2 decimal places.
1000	n3	1000.000	The number is rounded to 3 decimal place.
0.01	p1	1.0%	The number is converted to percentage with 1 decimal place.
0.01	p2	1.00%	The number is converted to percentage with 2 decimal place.

0.01	p3	1.000%	The number is converted to percentage with 3 decimal place.
1000	c1	\$1000.0	The currency symbol is appended to number and number is rounded to 1 decimal place.
1000	c2	\$1000.00	The currency symbol is appended to number and number is rounded to 2 decimal place.

### Customization

Individual text can be customized using the `textRender` event.

#### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container" :textRender='onTextRender'>
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' :dataLabel='datalabel'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationDataLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
        { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
        { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },

### Show percentages in data labels of pie chart

You can show the percentages in data labels of pie chart using `textRender` event and `template` option.

#### Using `textRender` event

You can customize the data label of pie chart using `textRender` event as follows to show percentage.

#### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container"
      enableSmartLabels='enableSmartLabels' :textRender='onTextRender'>
      <e-accumulation-series-collection>

### Using template

You can display the percentage values in data label of pie chart using **template** option.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container"
      enableSmartLabels='enableSmartLabels'>
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
          yName='y' :dataLabel='datalabel'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </div>
  </template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationDataLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
        { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
        { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
        { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
        { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' }
      ],
    }
  }
}

```

```

        datalabel: { visible: true, template: "<div
id='dataLabelTemplate'>${point.percentage}%</div>" },
        enableSmartLabels: true
    };
},
provide: {
    accumulationchart: [PieSeries, AccumulationDataLabel]
}
};
</script>
<style>
    #container {
        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/smartlabel-cs10" %}

### Grouping in Vue Accumulation chart component

You can club/group few points of the series based on [groupTo](#) property. For example, if the club value is 11, then the points with value less than 11 is grouped together and will be showed as a single point with label **others**. The property also takes value in percentage (percentage of total data points value).

#### APP.VUE

```

<template>
    <div id="app">
        <ejs-accumulationchart id="container">
            <e-accumulation-series-collection>
                <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' groupTo='11' :dataLabel='datalabel'> </e-accumulation-series>
            </e-accumulation-series-collection>
        </ejs-accumulationchart>
    </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationDataLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
    data() {
        return {
            seriesData: [
                { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
                { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
                { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
                { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
                { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' },
                { x: 'Nov', y: 9, text: 'Nov: 9' }, { x: 'Dec', y: 3.5,
text: 'Dec: 3.5' }
            ]
        }
    }
}

```

```

    ],
    datalabel: { visible: true, position: 'Outside', name: 'text'
  }
  };
  },
  provide: {
    accumulationchart: [PieSeries, AccumulationDataLabel]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/clubpoint-cs1" %}

### Broken slice

You can visualize all points available in club/group points by clicking on the grouped point. For example, if 5 points are grouped together it will be showed as a single slice with label **others**. If we click on **others** slice it will explode and broke into 5 seperate slices.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' groupTo='11' explode=true :dataLabel='datalabel'> </e-
accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationDataLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
        { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
        { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
        { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
        { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' },

```

```

        { x: 'Nov', y: 9, text: 'Nov: 9' }, { x: 'Dec', y: 3.5,
text: 'Dec: 3.5' }
      ],
      datalabel: { visible: true, position: 'Outside', name: 'text'
    }
  };
},
provide: {
  accumulationchart: [PieSeries, AccumulationDataLabel]
}
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/clubpoint-cs2" %}

### GroupMode

Slice can also be grouped based on number of points by specifying the **groupMode** to Point. For example, if the group to value is 11, accumulation chart will show 1st 11 points and will group remaining entries in the collection as a single point.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' groupTo='4' groupMode='groupMode' :dataLabel='datalabel'> </e-
accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationDataLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
        { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
        { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
        { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },

```

```

      { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' },
      { x: 'Nov', y: 9, text: 'Nov: 9' }, { x: 'Dec', y: 3.5,
text: 'Dec: 3.5' }
    ],
    datalabel: { visible: true, position: 'Outside', name: 'text'
  },
    groupMode: 'Point'
  };
},
provide: {
  accumulationchart: [PieSeries, AccumulationDataLabel]

</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/clubpoint-cs3" %}

### Customization

You can customize the grouped point and its data label using `pointRender` and `textRender` event.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container">
      <e-accumulation-series-collection :textRender='onTextRender'
:pointRender='onPointRender' :dataLabel='datalabel'>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' groupTo='11' :dataLabel='datalabel'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </div>
  </template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationDataLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
        { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
        { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
        { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },

```

```

        { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' },
        { x: 'Nov', y: 9, text: 'Nov: 9' }, { x: 'Dec', y: 3.5,
text: 'Dec: 3.5' }
    ],
    datalabel: { visible: true, position: 'Outside', name: 'text'
}
    };
},
provide: {
    accumulationchart: [PieSeries, AccumulationDataLabel]
},
methods: {
    onTextRender: function (args) {
        if (args.text.indexOf('Others') > -1) {
            args.text = 'Grouped Slices';
            args.color = 'red';
            args.border.width = 1;
        }
    },
    onPointRender: function (args) {
        if ((args.point.x as string).indexOf('Others') > -1) {
            args.fill = '#D3D3D3';
        }
    }
}
};
</script>
<style>
    #container {
        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/clubpoint-cs4" %}

### Empty points in Vue Accumulation chart component

The data points those uses the **null** or **undefined** as value are considered as empty points. The empty data points are ignored and not plotted in the chart. You can customize those points, using the [emptyPointSettings](#) property in

series. The default mode of the empty point is **Gap**. Other supported modes are **Average** and **Zero**.

### APP.VUE

```

<template>
    <div id="app">
        <ejs-accumulationchart id="container">
            <e-accumulation-series-collection>
                <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' :emptyPointSettings='emptyPointSettings'> </e-accumulation-series>
            </e-accumulation-series-collection>
        </ejs-accumulationchart>
    </div>
</template>
<script>

```

```

import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationDataLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
        { x: 'Mar', y: null, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
        { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
        { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y:
undefined, text: 'Aug: 25' },
        { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' } ],
      emptyPointSettings: { mode: 'Zero', fill: 'pink' },
    };
  },
  provide: {
    accumulationchart: [PieSeries, AccumulationDataLabel]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/radius-cs3" %}

### Customization

Specific color for an empty point can be set by using the `fill` property in `emptyPointSettings` and the border for an empty point can be set by using the `border` property.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' :emptyPointSettings='emptyPointSettings'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>

    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/radius-cs4" %}

### Annotation in Vue Accumulation chart component

The annotations are used to mark the specific area of interest in the chart area with texts, shapes or images.

<!-- markdownlint-disable MD033 -->

By using the <code>content</code> option of annotation property, you can specify the Id of the element that needs

to be displayed in the chart area.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container" :annotations='annotations'>
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationAnnotation } from
"@syncfusion/ej2-vue-charts";

```

```

Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [{ x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 }, { x: 'Mar', y:
7 }, { x: 'Apr', y: 13.5 }, { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 }, { x:
'Jul', y: 26 }, { x: 'Aug', y: 25 },
        { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }],
      annotations:[{
        content: '<div style="border: 1px solid black;background-
color:#f5f5f5; padding: 5px 5px 5px 5px">13.5</div>',
        region: 'Series',
        coordinateUnits: 'Point',
        x: 'Jan',
        y: 3
      }]
    };
  },
  provide: {
    accumulationchart: [AccumulationAnnotation, PieSeries]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs1" %}

Note: To use annotation feature in accumulation chart, we need to inject **AccumulationAnnotation** using **provide**.

### Region

The annotation can be placed with respect to either **Series** or **Chart**.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container" :annotations='annotations'>
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationAnnotation } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {

```

```

    return {
      seriesData: [{ x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 }, { x: 'Mar', y:
7 }, { x: 'Apr', y: 13.5 }, { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 }, { x:
'Jul', y: 26 }, { x: 'Aug', y: 25 },
        { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }],
      annotations:[{
        content:'<div style="border: 1px solid black;background-

  ];
},
provide: {
  accumulationchart: [AccumulationAnnotation, PieSeries]
}
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs3" %}

### Alignment

The annotations provides the `verticalAlignment` or `horizontalAlignment` properties. The `verticalAlignment` property can be customized via `Top`, `Bottom` or `Middle` and the `horizontalAlignment` property can be customized via `Near`, `Far` or `Center`.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container" :annotations='annotations'>
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationAnnotation } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [{ x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 }, { x: 'Mar', y:
7 }, { x: 'Apr', y: 13.5 }, { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 }, { x:
'Jul', y: 26 }, { x: 'Aug', y: 25 },
        { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }],
      annotations:[{
        content: '<div style="border: 1px solid black;background-
color:#f5f5f5; padding: 5px 5px 5px 5px">Jan : 13.5</div>',
        region: 'Series',
        coordinateUnits: 'Point',

```

```

        x: 'Jan',
        y: 3,
        verticalAlignment: 'Top',
        horizontalAlignment: 'Near'
    }]
    };
},
provide: {
    accumulationchart: [AccumulationAnnotation, PieSeries]
}
};
</script>
<style>
#container {
    height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs4" %}

### Tooltip in Vue Accumulation chart component

Tooltip for the accumulation chart can be enabled by using the [enable](#) property.

#### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container" :tooltip='tooltip'>
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' radius='70%'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationTooltip } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 },
        { x: 'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
        { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 },
        { x: 'Jul', y: 26 }, { x: 'Aug', y: 25 },
        { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }
      ],
      tooltip:{enable: true}
    };
  },
  provide: {
    accumulationchart: [PieSeries, AccumulationTooltip]
  }
}

```

```
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>
```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs27" %}

Note: To use tooltip feature, inject the `AccumulationTooltip` into the `provide`.

### Header

We can specify header for the tooltip using `header` property.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-accumulationchart id="container" :tooltip='tooltip'>
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' radius='70%'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationTooltip } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 },
        { x: 'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
        { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 },
        { x: 'Jul', y: 26 }, { x: 'Aug', y: 25 },
        { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }
      ],
      tooltip:{enable: true, header:"Pie Chart"}
    };
  },
  provide: {
    accumulationchart: [PieSeries, AccumulationTooltip]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>
```

```
{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs28" %}
```

### Format

By default, tooltip shows information of x and y value in points. In addition to that, you can show more information in tooltip. For example the format `${series.name} ${point.x}` shows series name and point x value.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-accumulationchart id="container" :tooltip='tooltip'>
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' radius='70%'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationTooltip } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 },
        { x: 'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
        { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 },
        { x: 'Jul', y: 26 }, { x: 'Aug', y: 25 },
        { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }
      ],
      tooltip:{enable: true, format: '${point.x} : <b>${point.y}</b>'}
    };
  },
  provide: {
    accumulationchart: [PieSeries, AccumulationTooltip]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>
```

```
{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs29" %}
```

### Tooltip template

Any HTML element can be displayed in the tooltip by using the [template](#) property.

### APP.VUE

```
<template>
```

```

<div id="app">
  <ejs-accumulationchart id="container" :tooltip='tooltip'>
    <e-accumulation-series-collection>
      <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' radius='70%'> </e-accumulation-series>
    </e-accumulation-series-collection>
  </ejs-accumulationchart>
</div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationTooltip } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 },
        { x: 'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
        { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 },
        { x: 'Jul', y: 26 }, { x: 'Aug', y: 25 },
        { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }
      ],
      tooltip:{
        enable: true,
        template: "<div id='templateWrap' style='background-
color:#bd18f9;border-radius: 3px; float: right;padding: 2px;line-height:
20px;text-align: center;'>" +
          "<img src='sun_annotation.png' />" +
          "<div style='color:white; font-family:Roboto; font-style: medium;
fontp-size:14px;float: right;padding: 2px;line-height: 20px;text-align:
center;padding-right:6px'><span>${y}</span></div></div>"
        }
      };
    },
    provide: {
      accumulationchart: [PieSeries, AccumulationTooltip]
    }
  };
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs30" %}

### Fixed tooltip

By default, tooltip track the mouse movement, but you can set a fixed position for the tooltip by using the [location](#) property.

### APP.VUE

```
<template>
```

```

<div id="app">
  <ejs-accumulationchart id="container" :tooltip='tooltip'>
    <e-accumulation-series-collection>
      <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' radius='70%'> </e-accumulation-series>
    </e-accumulation-series-collection>
  </ejs-accumulationchart>
</div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationTooltip } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 },
        { x: 'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
        { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 },
        { x: 'Jul', y: 26 }, { x: 'Aug', y: 25 },
        { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }
      ],
      tooltip:{
        enable: true,
        location: { x: 200, y: 20 }
      }
    };
  },
  provide: {
    accumulationchart: [PieSeries, AccumulationTooltip]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs37" %}

### Customization

The [fill](#) and [border](#) properties are used to customize the background color and border of the tooltip respectively. The [textStyle](#) property in the tooltip is used to customize the font of the tooltip text. The [highlightColor](#) property can be used to change the color of the data point when hovering.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container" :tooltip='tooltip'
:highlightColor='highlightColor'>
      <e-accumulation-series-collection>

```

```

        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' radius='70%'> </e-accumulation-series>
    </e-accumulation-series-collection>
</ejs-accumulationchart>
</div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationTooltip } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
    data() {
        return {
            seriesData: [
                { x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 },
                { x: 'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
                { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 },
                { x: 'Jul', y: 26 }, { x: 'Aug', y: 25 },
                { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }
            ],
            tooltip: {
                enable: true,
                format: '${series.name} ${point.x} : ${point.y}',
                //fill for tooltip
                fill: '#7bb4eb',
                //border for tooltip
                border: {
                    width: 2,
                    color: 'grey'
                }
            },
            highlightColor: 'red',
        };
    },
    provide: {
        accumulationchart: [PieSeries, AccumulationTooltip]
    }
};
</script>
<style>
    #container {
        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs31" %}

To customize individual tooltip

Using [tooltipRender](#) event, you can customize a tooltip for particular point.

#### APP.VUE

```

<template>
    <div id="app">

```

```

        <ejs-accumulationchart id="container" :tooltip='tooltip'
:tooltipRender='tooltipRender'>
            <e-accumulation-series-collection>
                <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' radius='70%'> </e-accumulation-series>
            </e-accumulation-series-collection>
        </ejs-accumulationchart>
    </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationTooltip } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
    data() {
        return {
            seriesData: [
                { x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 },
                { x: 'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
                { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 },
                { x: 'Jul', y: 26 }, { x: 'Aug', y: 25 },
                { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }
            ],
            tooltip:{
                enable: true
            }
        };
    },
    provide: {
        accumulationchart: [PieSeries, AccumulationTooltip]
    },
    methods: {
        tooltipRender: function(args) {
            if (args.point.index === 3) {
                args.text = args.point.x + ' ' + ':' + args.point.y + ' ' + ' '
+ 'customtext';
                args.textStyle.color = '#f48042';
            }
        }
    }
};
</script>
<style>
    #container {
        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs32" %}

### Tooltip mapping name

By default, tooltip shows information of x and y value in points. You can show more information from datasource in tooltip by using the [tooltipMappingName](#) property of the tooltip. You can use the `${point.tooltip}` as place holders to display the specified tooltip content.

**APP.VUE**

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container" :tooltip='tooltip'>
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' tooltipMappingName='text' radius='70%'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationTooltip } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 13, text: 'Jan: 13' }, { x: 'Feb', y: 13,
text: 'Feb: 13' },
        { x: 'Mar', y: 17, text: 'Mar: 17' }, { x: 'Apr', y:
13.5, text: 'Apr: 13.5' }
      ],
      tooltip:{
        enable: true, format: '${point.tooltip}'
      }
    };
  },
  provide: {
    accumulationchart: [PieSeries, AccumulationTooltip]
  },
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

```
{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs33" %}
```

**Legend in Vue Accumulation chart component**

As like a chart, the legend is also available for accumulation charts, which gives information about the points. By default, the legend will be placed on the right, if the width of the chart is high or will be placed on the bottom, if the height of the chart is high. Other customization features regarding the legend element are same as the [chart legend](#). Here, the legend for a point can be collapsed by giving the empty string to the x value of the point.

**APP.VUE**

```

<template>
  <div id="app">

```

```

        <ejs-accumulationchart id="container"
:legendSettings='legendSettings'>
            <e-accumulation-series-collection>
                <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' radius='70%'> </e-accumulation-series>
            </e-accumulation-series-collection>
        </ejs-accumulationchart>
    </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationLegend } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
    data() {
        return {
            seriesData: [
                { x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 },
                { x: 'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
                { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 },
                { x: 'Jul', y: 26 }, { x: 'Aug', y: 25 },
                { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }
            ],
            legendSettings: {
                visible: true
            }
        };
    },
    provide: {
        accumulationchart: [PieSeries, AccumulationLegend]
    }
};
</script>
<style>
    #container {
        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/legend-cs1" %}

### Position and Alignment

By using the position property, you can position the legend at the **left**, **right**, **top** or **bottom** of the chart. You can also align the legend to **center**, **far** or **near** of the chart using the alignment property.

### APP.VUE

```

<template>
    <div id="app">
        <ejs-accumulationchart id="container"
:legendSettings='legendSettings'>
            <e-accumulation-series-collection>
                <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' radius='70%'> </e-accumulation-series>
            </e-accumulation-series-collection>
        </ejs-accumulationchart>
    </div>
</template>

```

```

        </ejs-accumulationchart>
    </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationLegend } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
    data() {
        return {
            seriesData: [
                { x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 },
                { x: 'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
                { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 },
                { x: 'Jul', y: 26 }, { x: 'Aug', y: 25 },
                { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }
            ],
            legendSettings:{ position:'Top' ,alignment:'Near'}
        };
    },
    provide: {
        accumulationchart: [PieSeries, AccumulationLegend]
    }
};
</script>
<style>
#container {
    height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs10" %}

### Legend Reverse

You can reverse the order of the legend items by using the [reverse](#) property. By default, legend for the first series in the collection will be placed first.

### APP.VUE

```

<template>
  <ejs-accumulationchart
    id="container"
    ref="pie"
    style="display: block"
    :legendSettings="legendSettings"
    :tooltip="tooltip"
    :enableAnimation="enableAnimation"
    :enableSmartLabels="enableSmartLabels"
  >
    <e-accumulation-series-collection>
      <e-accumulation-series
        :dataSource="data"
        xName="x"
        yName="y"
        :radius="radius"
      >
    </e-accumulation-series-collection>
  </ejs-accumulationchart>
</template>

```

```

        innerRadius="20%"
        :dataLabel="dataLabel"
      >

{% previewsample "page.domainurl/code-snippet/chart/series/legend-reverse-cs1" %}

### Legend Shape

To change the legend icon shape, use the `legendShape` property in the `series`. By default, legend icon shape

is `seriesType`.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-accumulationchart id="container"
:legendSettings='legendSettings'>
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' legendShape='Rectangle'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationLegend } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 },
        { x: 'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
        { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 },
        { x: 'Jul', y: 26 }, { x: 'Aug', y: 25 },
        { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }
      ],
      legendSettings:{ visible: true }
    };
  },
  provide: {
    accumulationchart: [PieSeries, AccumulationLegend]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs11" %}

### Legend Size

The legend size can be changed by using the `width` and `height` properties of the `legendSettings`.

### APP.VUE

```
<template>
```

```

<div id="app">
  <ejs-accumulationchart id="container"
:legendSettings='legendSettings'>
    <e-accumulation-series-collection>
      <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y'> </e-accumulation-series>
    </e-accumulation-series-collection>
  </ejs-accumulationchart>
</div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationLegend } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 },
        { x: 'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
        { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 },
        { x: 'Jul', y: 26 }, { x: 'Aug', y: 25 },
        { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }
      ],
      legendSettings:{ width: '150', height: '100', border: { width: 1,
color: 'pink' } }
    };
  },
  provide: {
    accumulationchart: [PieSeries, AccumulationLegend]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs12" %}

### Legend Item Size

You can customize the size of the legend items by using the `shapeHeight` and `shapeWidth` properties.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container"
:legendSettings='legendSettings'>
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>

```

```

    </div>
  </template>
  <script>
    import Vue from "vue";
    import { AccumulationChartPlugin, PieSeries, AccumulationLegend } from
    "@syncfusion/ej2-vue-charts";
    Vue.use(AccumulationChartPlugin);
    export default {
      data() {
        return {
          seriesData: [
            { x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 },
            { x: 'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
            { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 },
            { x: 'Jul', y: 26 }, { x: 'Aug', y: 25 },
            { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }
          ],
          legendSettings: { shapeHeight: 15, shapeWidth: 15 }
        };
      },
      provide: {
        accumulationchart: [PieSeries, AccumulationLegend]
      }
    };
  </script>
  <style>
    #container {
      height: 350px;
    }
  </style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs13" %}

### Paging for Legend

Paging will be enabled by default, when the legend items exceeds the legend bounds. You can view the each legend item by navigating between the pages using the navigation buttons.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container"
    :legendSettings='legendSettings'>
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
        yName='y'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
  import Vue from "vue";
  import { AccumulationChartPlugin, PieSeries, AccumulationLegend } from
  "@syncfusion/ej2-vue-charts";
  Vue.use(AccumulationChartPlugin);
  export default {

```

```

data() {
  return {
    seriesData: [
      { x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 },
      { x: 'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
      { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 },
      { x: 'Jul', y: 26 }, { x: 'Aug', y: 25 },
      { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }
    ],
    legendSettings:{ height: '150', width:'80' }
  };
},
provide: {
  accumulationchart: [PieSeries, AccumulationLegend]
}
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs14" %}

### Legend Text Wrap

When the legend text exceeds the container, the text can be wrapped by using `textWrap` Property. End user can also wrap the legend text based on the `maximumLabelWidth` property.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container"
      :legendSettings='legendSettings'>
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
          yName='y'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationLegend } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { 'x': 'Net-tution', y: 21, text: '21%' },
        { 'x': 'Private Gifts', y: 8, text: '8%' },
        { 'x': 'All Other', y: 9, text: '9%' },
        { 'x': 'Local Revenue', y: 4, text: '4%' },
        { 'x': 'State Revenue', y: 21, text: '21%' },
      ]
    }
  }
}

```

```

        { 'x': 'Federal Revenue', y: 16, text: '16%' },
        { 'x': 'Self-supporting Operations', y: 21, text: '21%'
    },
    ],
    xName: 'x', yName: 'y', startAngle: 0, endAngle: 360,
    innerRadius: '40%',
    type: 'Pie',
    legendSettings:{ visible:true, position:'Right', textWrap:'Wrap',
maximumLabelWidth:60, height:'44%', width:'64%' }
    };
},
provide: {
    accumulationchart: [PieSeries, AccumulationLegend]
}
};
</script>
<style>
    #container {
        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs15" %}

### Enable Animation

You can customize the animation while clicking legend by setting enableAnimation as true or false using enableAnimation property in Accumulation Chart.

### APP.VUE

```

<template>
    <div id="app">
        <ejs-accumulationchart id="container"
:legendSettings='legendSettings'>
            <e-accumulation-series-collection>
                <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' legendShape='Rectangle'> </e-accumulation-series>
            </e-accumulation-series-collection>
        </ejs-accumulationchart>
    </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationLegend } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
    data() {
        return {
            seriesData: [
                { x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 },
                { x: 'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
                { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 },
                { x: 'Jul', y: 26 }, { x: 'Aug', y: 25 },
                { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }
            ],

```

```

        legendSettings:{ visible: true },
        enableAnimation: true
    };
},
provide: {
    accumulationchart: [PieSeries, AccumulationLegend]
}
};
</script>
<style>
#container {
    height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs16" %}

### Legend Title

You can set title for legend using `title` property in `legendSettings`. You can also customize the `fontStyle`, `size`, `fontWeight`, `color`, `textAlignment`, `fontFamily`, `opacity` and `textOverflow` of legend title. `titlePosition` is used to set the legend position in `Top`, `Left` and `Right` position. `maximumTitleWidth` is used to set the width of the legend title. By default, it will be `100px`.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container"
      :legendSettings='legendSettings'>
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
          yName='y' radius='70%'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationLegend } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 },
        { x: 'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
        { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 },
        { x: 'Jul', y: 26 }, { x: 'Aug', y: 25 },
        { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }
      ],
      legendSettings:{ visible: true, title: 'Months', position: 'Bottom' }
    };
  },
  provide: {

```

```

        accumulationchart: [PieSeries, AccumulationLegend]
    }
};
</script>
<style>
    #container {
        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs17" %}

### Arrow Page Navigation

By default, the page number will be enabled while legend paging. Now, you can disable that page number and also you can get left and right arrows for page navigation. You have to set `false` value to `enablePages` to get this support.

### APP.VUE

```

<template>
    <div id="app">
        <ejs-accumulationchart id="container"
        :legendSettings='legendSettings'>
            <e-accumulation-series-collection>
                <e-accumulation-series :dataSource='seriesData' xName='x'
                yName='y' radius='70%'> </e-accumulation-series>
            </e-accumulation-series-collection>
        </ejs-accumulationchart>
    </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationLegend } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
    data() {
        return {
            seriesData: [
                { x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 },
                { x: 'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
                { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 },
                { x: 'Jul', y: 26 }, { x: 'Aug', y: 25 },
                { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 },
                { x: 'Nov', y: 15 }, { x: 'Dec', y: 15 }
            ],
            legendSettings:{ width: '260px', height: '50px', enablePages: false,
            position: 'Bottom' }
        };
    },
    provide: {
        accumulationchart: [PieSeries, AccumulationLegend]
    }
};
</script>
<style>

```

```
#container {
  height: 350px;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs18" %}

### Legend Item Padding

The [itemPadding](#) property can be used to adjust the space between the legend items.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-accumulationchart id="container"
:legendSettings='legendSettings'>
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' radius='70%'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, AccumulationLegend } from
"@syncfusion/ej2-vue-charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 },
        { x: 'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
        { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 },
        { x: 'Jul', y: 26 }, { x: 'Aug', y: 25 },
        { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 },
        { x: 'Nov', y: 15 }, { x: 'Dec', y: 15 }
      ],
      legendSettings:{ width: '260px', height: '50px', position: "Bottom",
itemPadding: 30 }
    };
  },
  provide: {
    accumulationchart: [PieSeries, AccumulationLegend]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs19" %}

## Center Label in Vue Accumulation chart component

## Center label

Using [centerLabel](#) it is now possible to place a label at the center of a pie or donut chart. To configure the default text rendered on the center label for the pie and doughnut charts, use the [text](#) property in the [centerLabel](#).

**APP.VUE**

```
<template>
  <div id="app">
    <ejs-accumulationchart id="container" :centerLabel="centerLabel">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' innerRadius='65%'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries } from "@syncfusion/ej2-vue-
charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Chrome', y: 61.3, text: 'Chrome: 61.3%' },
        { x: 'Safari', y: 24.6, text: 'Safari: 24.6%' },
        { x: 'Edge', y: 5.0, text: 'Edge: 5.0%' },
        { x: 'Samsung Internet', y: 2.7, text: 'Samsung Internet: 2.7%' },
        { x: 'Firefox', y: 2.6, text: 'Firefox: 2.6%' },
        { x: 'Others', y: 3.6, text: 'Others: 3.6%' }
      ],
      centerLabel: {
        text : 'Mobile<br>Browsers<br>Statistics'
      }
    };
  },
  provide: {
    accumulationchart: [PieSeries]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>
```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs34" %}

### Hover text

The default text in the center label can be changed when the mouse pointer hovers over the pie and doughnut charts slice using the [hoverTextFormat](#) property.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-accumulationchart id="container" :centerLabel="centerLabel">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' innerRadius='65%'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries } from "@syncfusion/ej2-vue-
charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Chrome', y: 61.3, text: 'Chrome: 61.3%' },
        { x: 'Safari', y: 24.6, text: 'Safari: 24.6%' },
        { x: 'Edge', y: 5.0, text: 'Edge: 5.0%' },
        { x: 'Samsung Internet', y: 2.7, text: 'Samsung Internet: 2.7%' },
        { x: 'Firefox', y: 2.6, text: 'Firefox: 2.6%' },
        { x: 'Others', y: 3.6, text: 'Others: 3.6%' }
      ],
      centerLabel:{
        text : 'Mobile<br>Browsers<br>Statistics',
        hoverTextFormat: '$${point.x} <br> Browser Share <br>
${point.y}%'
      }
    };
  },
  provide: {
    accumulationchart: [PieSeries]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>
```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs35" %}

### Customization

Customize the center label text using the [textStyle](#) property.

**APP.VUE**

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container" :centerLabel="centerLabel">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' innerRadius='65%'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries } from "@syncfusion/ej2-vue-
charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Chrome', y: 61.3, text: 'Chrome: 61.3%' },
        { x: 'Safari', y: 24.6, text: 'Safari: 24.6%' },
        { x: 'Edge', y: 5.0, text: 'Edge: 5.0%' },
        { x: 'Samsung Internet', y: 2.7, text: 'Samsung Internet: 2.7%' },
        { x: 'Firefox', y: 2.6, text: 'Firefox: 2.6%' },
        { x: 'Others', y: 3.6, text: 'Others: 3.6%' }
      ],
      centerLabel: {
        text : 'Mobile<br>Browsers<br>Statistics',
        hoverTextFormat: '${point.x} <br> Browser Share <br>
${point.y}%',
        textStyle:{
          fontWeight: '900',
          size: '15px',
          color: 'red',
          fontFamily: 'Roboto',
          fontStyle: 'Italic'
        }
      }
    };
  },
  provide: {
    accumulationchart: [PieSeries]
  }
};
</script>

## Title and sub title in Vue Accumulation chart component

### Title

Accumulation Chart can be given a title using [title](#) property, to show the information about the data plotted.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='gold' name='Gold'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50 },
        { country: "China", gold: 40 },
        { country: "Japan", gold: 70 },
        { country: "Australia", gold: 60 },
        { country: "France", gold: 50 },
        { country: "Germany", gold: 40 },
        { country: "Italy", gold: 40 },
        { country: "Sweden", gold: 30 }
      ],
      primaryXAxis: {
        valueType: 'Category',
        title: 'Countries'
      },
      title: "Olympic Medals"
    };
  },
  provide: {
    chart: [ColumnSeries, Category]
  },
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>
```

{% previewsample "page.domainurl/code-snippet/chart/chart-title-cs1" %}

### Title customization

Accumulation Chart can be customizing a title using [titleStyle](#) property, to show the information about the data plotted.

#### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title' :titleStyle='titleStyle'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='gold' name='Gold'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50 },
        { country: "China", gold: 40 },
        { country: "Japan", gold: 70 },
        { country: "Australia", gold: 60 },
        { country: "France", gold: 50 },
        { country: "Germany", gold: 40 },
        { country: "Italy", gold: 40 },
        { country: "Sweden", gold: 30 }
      ],
      primaryXAxis: {
        valueType: 'Category',
        title: 'Countries'
      },
      title: "Olympic Medals",
      titleStyle:{
        fontFamily: "Arial",
        fontStyle: 'italic',
        fontWeight: 'regular',
        color: "#E27F2D",
        size: '23px'
      }
    };
  },
  provide: {
    chart: [ColumnSeries, Category]
  },
};
</script>
<style>
#container {
  height: 350px;
```

```
}
</style>
```

```
{% previewsample "page.domainurl/code-snippet/chart/chart-title-cs2" %}
```

### SubTitle

Accumulation Chart can be given a subtitle using [subTitle](#) property, to show the information about the data plotted.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title' :subTitle='subTitle'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='gold' name='Gold'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50 },
        { country: "China", gold: 40 },
        { country: "Japan", gold: 70 },
        { country: "Australia", gold: 60 },
        { country: "France", gold: 50 },
        { country: "Germany", gold: 40 },
        { country: "Italy", gold: 40 },
        { country: "Sweden", gold: 30 }
      ],
      primaryXAxis: {
        valueType: 'Category',
        title: 'Countries'
      },
      title: "Olympic Medals",
      subTitle:'In the year of 2014'
    };
  },
  provide: {
    chart: [ColumnSeries, Category]
  },
};
</script>
<style>
#container {
  height: 350px;
```

```
}
</style>
```

```
{% previewsample "page.domainurl/code-snippet/chart/chart-title-cs3" %}
```

### SubTitle Customization

Accumulation Chart can be customizing a subtitle using [subTitleStyle](#) property.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title' :subTitle='subTitle'
    :subTitleStyle='subTitleStyle' :primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
        xName='country' yName='gold' name='Gold'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50 },
        { country: "China", gold: 40 },
        { country: "Japan", gold: 70 },
        { country: "Australia", gold: 60 },
        { country: "France", gold: 50 },
        { country: "Germany", gold: 40 },
        { country: "Italy", gold: 40 },
        { country: "Sweden", gold: 30 }
      ],
      primaryXAxis: {
        valueType: 'Category',
        title: 'Countries'
      },
      title: "Olympic Medals",
      subTitle:'In the year of 2014',
      subTitleStyle:{
        fontFamily: "Arial",
        fontStyle: 'italic',
        fontWeight: 'regular',
        color: "#E27F2D"
      }
    };
  },
  provide: {
    chart: [ColumnSeries, Category]
  },
}
```

```
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>
```

{% previewsample "page.domainurl/code-snippet/chart/chart-title-cs4" %}

## Chart print in Vue Accumulation chart component

### Print

The rendered chart can be printed directly from the browser by calling the public method print.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-button id='print' @click.native='print'>Print</ejs-button>
    <ejs-accumulationchart ref="chart" id="container">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' radius='70%'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries } from "@syncfusion/ej2-vue-
charts";
import { ButtonPlugin } from "@syncfusion/ej2-vue-buttons";
Vue.use(AccumulationChartPlugin);
Vue.use(ButtonPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
        { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
        { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
        { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
        { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' } ],
    };
  },
  provide: {
    accumulationchart: [PieSeries]
  },
  methods: {
    print: function() {
      this.$refs.chart.print();
    }
  }
}
```

```

    }
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/radius-cs1" %}

### Export

The rendered chart can be exported to **Image**(jpeg or png) or **SVG** or **PDF** format by using the export method.

Input parameters for this method are **Export Type** for **format** and **fileName** of result.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-button id='togglebtn' @click.native='exportIcon'>Export</ejs-button>
    <ejs-accumulationchart ref="chart" id="container">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData' xName='x'
yName='y' radius='70%'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries, Export } from "@syncfusion/ej2-vue-charts";

}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/radius-cs2" %}

## Appearance in Vue Accumulation chart component

### Custom Color Palette

You can customize the default color of series or points by providing a custom color palette of your choice by using the [palettes](#) property.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container">
      <e-accumulation-series-collection>
        <e-accumulation-series :dataSource='seriesData'
:palettes='palettes' xName='x' yName='y'> </e-accumulation-series>
      </e-accumulation-series-collection>
    </ejs-accumulationchart>
  </div>
</template>
<script>
import Vue from "vue";
import { AccumulationChartPlugin, PieSeries } from "@syncfusion/ej2-vue-
charts";
Vue.use(AccumulationChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 3, fill: '#498fff', text: 'January' }, { x: 'Feb',
y: 3.5, fill: '#ffa060', text: 'February' },
        { x: 'Mar', y: 7, fill: '#ff68b6', text: 'March' }, { x: 'Apr',
y: 13.5, fill: '#81e2a1', text: 'April' }
      ],
      palettes: ["#E94649", "#F6B53F", "#6FAAB0",
"#FF33F3", "#228B22", "#3399FF"],
    };
  },
  provide: {
    accumulationchart: [PieSeries]
  }
};

```

```

</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

```
{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs5" %}
```

## Animation

### Fluid Animation

Fluid animation used to animate series with updated dataSource continues animation rather than animation whole series. You can customize animation for a particular series using `[animate]` method.

## APP.VUE

```

<template>
  <div id="app">
    <ejs-accumulationchart id="container" ref="pie" :title="title"
    :loaded="loaded">
      <e-accumulation-series-collection>

</script>

```

{% previewsample "page.domainurl/code-snippet/chart/series/pie-cs6" %}

### Accessibility in Vue Accumulation chart component

The Accumulation chart component followed the accessibility guidelines and standards, including [ADA](#), [Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the Accumulation chart component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2](#) Support |  |

| [Section 508](#) Support |  |

| Screen Reader Support |  |

| Right-To-Left Support |  |

| Color Contrast |  |

| Mobile Device Support |  |

```

| Keyboard Navigation Support |  |

| Accessibility Checker Validation |  |

| Axe-core Accessibility Validation |  |

<style>
.post .post-content img {
display: inline-block;
margin: 0.5em 0;
}
</style>

<div> - All
features of the component meet the requirement.</div>

<div> - Some features of the component do not meet the requirement.</div>

<div> - The component does not meet the requirement.</div>

```

### WAI-ARIA attributes

The Accumulation chart component followed the [WAI-ARIA](#) patterns to meet the accessibility. The following ARIA attributes are used in the Accumulation chart component:

- `img` (role)
- `button` (role)
- `region` (role)
- `aria-label` (attribute)
- `aria-hidden` (attribute)
- `aria-pressed` (attribute)

### Keyboard interaction

The Accumulation chart component followed the [keyboard interaction](#) guideline, making it easy for people who use assistive technologies (AT) and those who completely rely on keyboard navigation. The following keyboard shortcuts are supported by the Accumulation chart component.

| **Press** | **To do this** |

| --- | --- |

| **Alt + J** | Moves the focus to the Accumulation chart element. |

| **Tab** | Moves the focus to the next element in the Accumulation chart. |

| **Shift + Tab** | Moves the focus to the previous element in the Accumulation chart. |

| **Down Arrow** | Moves the focus to the data point left side from the selected point. |

- | Up Arrow | Moves the focus to the data point right side from the selected point. |
- | Down/Left Arrow | Moves the focus to the legend left side from the selected legend. |
- | Up/Right Arrow | Moves the focus to the legend right side from the selected legend. |
- | Enter/Space | Toggles the visibility of the corresponding series. |
- | Ctrl + P | Prints the Accumulation chart. |

### Ensuring accessibility

The Accumulation chart component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Accumulation chart component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Accumulation chart component with accessibility tools.

```
{% previewsample "https://ej2.syncfusion.com/accessibility/accumulation-chart.html" %}
```

## AppBar

### Getting Started with the Vue AppBar Component in Vue 2

This article provides a step-by-step guide for setting up a Vue 2 project using [Vue-CLI](#) and integrating the Syncfusion Vue AppBar component using the [Composition API](#) / [Options API](#).

### Prerequisites

[System requirements for Syncfusion Vue UI components](#)

### Dependencies

The following list of dependencies are required to use the AppBar component in your application.

```
`js
|-- @syncfusion/ej2-vue-navigations
|-- @syncfusion/ej2-vue-base
|-- @syncfusion/ej2-navigations
|-- @syncfusion/ej2-base
`,`
```

### Setting up the Vue 2 project

To generate a Vue 2 project using Vue-CLI, use the [vue create](#) command. Follow these steps to install Vue CLI and create a new project:

```
`bash
npm install -g @vue/cli
vue create quickstart
cd quickstart
```

```
npm run serve
```

```
,
```

```
or
```

```
`bash
```

```
yarn global add @vue/cli
```

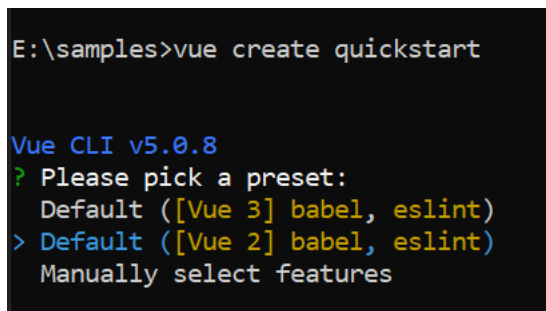

```
vue create quickstart
```

```
cd quickstart
```

```
yarn run serve
```

```
,
```

When creating a new project, choose the option `Default ([Vue 2] babel, eslint)` from the menu.

```
E:\samples>vue create quickstart

Vue CLI v5.0.8
? Please pick a preset:
  Default ([Vue 3] babel, eslint)
> Default ([Vue 2] babel, eslint)
  Manually select features
```

Once the `quickstart` project is set up with default settings, proceed to add Syncfusion components to the project.

#### Add Syncfusion Vue packages

Syncfusion packages are available at [npmjs.com](https://www.npmjs.com). To use Vue components, install the required npm package.

This article uses the [Vue Appbar component](#) as an example. Install the `@syncfusion/ej2-vue-navigations` package by running the following command:

```
`bash
```

```
npm install @syncfusion/ej2-vue-navigations --save
```

```
,
```

```
or
```

```
`bash
```

```
yarn add @syncfusion/ej2-vue-navigations
```

```
,
```

This example uses the [Vue Button component](#) inside the [Vue Appbar component](#). Install the `@syncfusion/ej2-vue-buttons` package by running the following command:

```
`bash
```

```
npm install @syncfusion/ej2-vue-buttons --save
```

`

or

`bash

yarn add @syncfusion/ej2-vue-buttons

`

### Import Syncfusion CSS styles

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, [CRG](#) and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to themes in a Vue project.

In this article, the **Material** theme is applied using CSS styles, which are available in installed packages. The necessary **Material** CSS styles for the Appbar component and its dependents were imported into the `<style>` section of **src/App.vue** file.

#### ~/SRC/APP.VUE

```
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
</style>
```

### Add Syncfusion Vue component

Follow the below steps to add the Vue Appbar component using **Composition API** or **Options API**:

1\ First, import and register the Appbar component in the **script** section of the **src/App.vue** file. If you are using the **Composition API**, you should add the **setup** attribute to the **script** tag to indicate that Vue will be using the **Composition API**.

#### COMPOSITION API (~/SRC/APP.VUE)

```
<script setup>
import { AppBarComponent as EjsAppbar } from '@syncfusion/ej2-vue-navigations';
import { ButtonComponent as EjsButton } from '@syncfusion/ej2-vue-buttons';
</script>
```

#### OPTIONS API (~/SRC/APP.VUE)

```
<script>
import { AppBarComponent } from "@syncfusion/ej2-vue-navigations";
import { ButtonComponent } from "@syncfusion/ej2-vue-buttons";
export default {
  components: {
    'ejs-appbar': AppBarComponent,
    'ejs-button': ButtonComponent
  }
}
</script>
```

2.\ In the `template` section, define the AppBar component with the `cssClass` property.

### **(~/SRC/APP.VUE)**

```
<template>
<ejs-appbar colorMode="Primary">
  <ejs-button cssClass="e-inherit" iconCss="e-icons e-menu"></ejs-button>
  <span class="regular" style="margin:0 5px">Vue AppBar</span>
  <div class="e-appbar-spacer"></div>
  <ejs-button cssClass="e-inherit">FREE TRIAL</ejs-button>
</ejs-appbar>
</template>
```

Here is the summarized code for the above steps in the `src/App.vue` file:

### **COMPOSITION API (~/SRC/APP.VUE)**

```
<template>
  <ejs-appbar colorMode="Primary">
    <ejs-button cssClass="e-inherit" iconCss="e-icons e-menu"></ejs-button>
    <span class="regular" style="margin:0 5px">Vue AppBar</span>
    <div class="e-appbar-spacer"></div>
    <ejs-button cssClass="e-inherit">FREE TRIAL</ejs-button>
  </ejs-appbar>
</template>
<script setup>
import { AppBarComponent as EjsAppBar } from '@syncfusion/ej2-vue-
navigations';
import { ButtonComponent as EjsButton } from '@syncfusion/ej2-vue-buttons';
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
</style>
```

### **OPTIONS API (~/SRC/APP.VUE)**

```
<template>
  <ejs-appbar colorMode="Primary">
    <ejs-button cssClass="e-inherit" iconCss="e-icons e-menu"></ejs-button>
    <span class="regular" style="margin:0 5px">Vue AppBar</span>
    <div class="e-appbar-spacer"></div>
    <ejs-button cssClass="e-inherit">FREE TRIAL</ejs-button>
  </ejs-appbar>
</template>
<script>
import { AppBarComponent } from "@syncfusion/ej2-vue-navigations";
import { ButtonComponent } from "@syncfusion/ej2-vue-buttons";
export default {
  components: {
    'ejs-appbar': AppBarComponent,
    'ejs-button': ButtonComponent
  },
  data: function () {
    return {};
  }
};
```

```
    },  
  };  
</script>  
<style>  
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";  
  @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";  
  @import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";  
</style>
```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run serve
```

```
,
```

or

```
`bash
```

```
yarn run serve
```

```
,
```

```
{% previewsample "page.domainurl/code-snippet/appbar/getting-started-cs5" %}
```

### Getting Started with Vue AppBar Component in Vue 3

This article provides a step-by-step guide for setting up a [Vite](#) project with a JavaScript environment and integrating the Syncfusion Vue AppBar component using the [Composition API](#) / [Options API](#).

The **Composition API** is a new feature introduced in Vue.js 3 that provides an alternative way to organize and reuse component logic. It allows developers to write components as functions that use smaller, reusable functions called composition functions to manage their properties and behavior.

The **Options API** is the traditional way of writing Vue.js components, where the component logic is organized into a series of options that define the component's properties and behavior. These options include data, methods, computed properties, watchers, lifecycle hooks, and more.

### Prerequisites

#### [System requirements for Syncfusion Vue UI components](#)

#### Setup the Vite project

A recommended approach for beginning with Vue is to scaffold a project using [Vite](#). To create a new Vite project, use one of the commands that are specific to either NPM or Yarn.

```
`bash
```

```
npm create vite@latest
```

```
,
```

or

```
`bash
```

```
yarn create vite
```

`

Using one of the above commands will lead you to set up additional configurations for the project as below:

1. Define the project name: We can specify the name of the project directly. Let's specify the name of the project as `my-project` for this article.

```
`bash
```

```
? Project name: » my-project
```

`

2. Select `Vue` as the framework. It will create a Vue 3 project.

```
`bash
```

```
? Select a framework: » - Use arrow-keys. Return to submit.
```

```
Vanilla
```

```
Vue
```

```
React
```

```
Preact
```

```
Lit
```

```
Svelte
```

```
Others
```

`

3. Choose `JavaScript` as framework variant to build this Vite project using JavaScript and Vue.

```
`bash
```

```
? Select a variant: » - Use arrow-keys. Return to submit.
```

```
JavaScript
```

```
TypeScript
```

```
Customize with create-vue ↗
```

```
Nuxt ↗
```

`

4. Upon completing the aforementioned steps to create the `my-project`, run the following command to install its dependencies:

```
`bash
```

```
cd my-project
```

```
npm install
```

`

or

```
`bash
cd my-project
yarn install
`
```

Now that `my-project` is ready to run with default settings, let's add Syncfusion Vue AppBar component to the project.

#### Add Syncfusion Vue packages

Syncfusion Vue component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion Vue components in the project, install the corresponding npm package.

This article uses the [Vue AppBar component](#) as an example. To use the `Vue AppBar` component in the project, the `@syncfusion/ej2-vue-navigations` package needs to be installed using the following command

```
`bash
npm install @syncfusion/ej2-vue-navigations --save
`
```

or

```
`bash
yarn add @syncfusion/ej2-vue-navigations
`
```

#### Import Syncfusion CSS styles

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, [CRG](#) and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to themes in a Vue project.

In this article, `Material` theme is applied using CSS styles, which are available in installed packages. The necessary `Material` CSS styles for the AppBar component and its dependents were imported into the `<style>` section of the `src/App.vue` file.

```
`html
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-navigations/styles/material.css";
</style>
`
```

#### Adding Syncfusion Vue AppBar component in the application

Follow the below steps to add the Vue AppBar component using `Composition API` or `Options API`:

1.First, import and register the AppBar component and its child directives in the `script` section of the `src/App.vue` file. If you are using the `Composition API`, you should add the `setup` attribute to the `script` tag to indicate that Vue will be using the `Composition API`.

#### **COMPOSITION API (~SRC/APP.VUE)**

```
<script setup>
import { AppBarComponent as EjsAppBar } from '@syncfusion/ej2-vue-
navigations';
</script>
```

#### **OPTIONS API (~SRC/APP.VUE)**

```
<script>
import { AppBarComponent } from "@syncfusion/ej2-vue-navigations";
export default {
  name: "App",
  components: {
    "ejs-appbar": AppBarComponent,
  }
}
</script>
```

2.Add the component definition in template section.

```
`html
<template>
<ejs-appbar colorMode="Primary">
<ejs-button cssClass="e-inherit" iconCss="e-icons e-menu"></ejs-button>
<span class="regular" style="margin:0 5px">Vue AppBar</span>
<div class="e-appbar-spacer"></div>
<ejs-button cssClass="e-inherit">FREE TRIAL</ejs-button>
</ejs-appbar>
</template>
`
```

Here is the summarized code for the above steps in the `src/App.vue` file:

#### **COMPOSITION API (~SRC/APP.VUE)**

```
<template>
<ejs-appbar colorMode="Primary">
<ejs-button cssClass="e-inherit" iconCss="e-icons e-menu"></ejs-button>
<span class="regular" style="margin:0 5px">Vue AppBar</span>
<div class="e-appbar-spacer"></div>
<ejs-button cssClass="e-inherit">FREE TRIAL</ejs-button>
</ejs-appbar>
</template>
<script setup>
```

```
import { AppBarComponent as EjsAppBar } from '@syncfusion/ej2-vue-
navigations';
import { ButtonComponent as EjsButton } from "@syncfusion/ej2-vue-buttons";
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
navigations/styles/material.css";
</style>
```

### OPTIONS API (~SRC/APP.VUE)

```
<template>
<ejs-appbar colorMode="Primary">
<ejs-button cssClass="e-inherit" iconCss="e-icons e-menu"></ejs-button>
<span class="regular" style="margin:0 5px">Vue AppBar</span>
<div class="e-appbar-spacer"></div>
<ejs-button cssClass="e-inherit">FREE TRIAL</ejs-button>
</ejs-appbar>
</template>
<script>
import { AppBarComponent } from '@syncfusion/ej2-vue-navigations';
export default {
name: "App",
components: {
"ejs-appbar": AppBarComponent
}
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
navigations/styles/material.css";
</style>
```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run dev
```

```
,
```

or

```
`bash
```

```
yarn run dev
```

```
,
```

The output will appear as follows:

Refer the sample [Vue 3 using Composition API AppBar getting started](#)

For migrating from Vue 2 to Vue 3, refer to the [migration](#) documentation.

- [Getting Started with Vue UI Components using Options API and TypeScript](#)

## Size and color in Vue AppBar component

### Size

The size of the AppBar can be set using the [mode](#) property. The available types of the AppBar are as follows:

- Regular AppBar
- Prominent AppBar
- Dense AppBar

### Regular AppBar

This mode is the default one in which the AppBar is displayed with the default height.

### APP.VUE

```
<template>
  <div class="control-container">
    <ejs-appbar colorMode="Primary">
      <ejs-button cssClass="e-inherit" iconCss="e-icons e-menu"></ejs-
button>
      <span class="regular">Regular AppBar</span>
      <div class="e-appbar-spacer"></div>
      <ejs-button cssClass="e-inherit">FREE TRIAL</ejs-button>
    </ejs-appbar>
  </div>
</template>
<script>
import Vue from "vue";
import { AppBarPlugin } from "@syncfusion/ej2-vue-navigations";
import { ButtonPlugin } from "@syncfusion/ej2-vue-buttons";
Vue.use(AppBarPlugin);
Vue.use(ButtonPlugin);
export default {
  data: function () {
    return {};
  }
};
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
.control-container .e-btn.e-inherit {
  margin: 0 3px;
}
</style>
```

```
{% previewsample "page.domainurl/code-snippet/appbar/getting-started-cs9" %}
```

### Prominent AppBar

This height mode can be set to the AppBar by setting **Prominent** to the property [mode](#). The prominent AppBar is displayed with a longer height and can be used for larger titles, images, or texts. It is also longer than the regular AppBar. In the following example, we have customized the prominent text using align-self and white-space CSS properties. You can change the prominent AppBar height if larger titles, images, or texts are used.

### APP.VUE

```
<template>
  <div class="control-container">
    <ejs-appbar colorMode="Primary" mode="Prominent" cssClass="prominent-
    appbar">
      <ejs-button cssClass="e-inherit" iconCss="e-icons e-menu"></ejs-
    button>
      <span class="prominent">AppBar Component with Prominent mode</span>
      <div class="e-appbar-spacer"></div>
      <ejs-button cssClass="e-inherit">FREE TRIAL</ejs-button>
    </ejs-appbar>
  </div>
</template>
<script>
import Vue from "vue";
import { AppBarPlugin } from "@syncfusion/ej2-vue-navigations";
import { ButtonPlugin } from "@syncfusion/ej2-vue-buttons";
Vue.use(AppBarPlugin);
Vue.use(ButtonPlugin);
export default {
  data: function () {
    return {};
  }
};
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
.prominent-appbar .prominent {
  align-self: center;
  white-space: break-spaces;
  text-align: inherit;
  font-size: 35px;
  line-height: 50px;
}
.prominent-appbar.e-appbar {
  background-image:
url("https://ej2.syncfusion.com/demos/src/appbar/images/prominent.png");
  background-size: 100% 350px;
  color: #ffffff;
  background-repeat: no-repeat;
  height: 350px;
}
.prominent-appbar .e-inherit.e-btn {
```

```

    background: transparent;
  }
  .prominent-appbar .e-inherit.e-btn:hover,
  .prominent-appbar .e-inherit.e-btn:focus,
  .prominent-appbar .e-inherit.e-btn:active,
  .prominent-appbar .e-inherit.e-btn.e-active,
  .prominent-appbar .e-inherit.e-css.e-btn:hover,
  .prominent-appbar .e-inherit.e-css.e-btn:focus
  .prominent-appbar .e-inherit.e-css.e-btn:active
  .prominent-appbar .e-inherit.e-css.e-btn.e-active {
    background: rgba(255, 255, 255, .08);
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/appbar/getting-started-cs10" %}

### Dense AppBar

This height mode can be set to the AppBar by setting **Dense** to the property [mode](#). Dense AppBar is displayed with shorter height which is denser to accommodate all the AppBar content.

### APP.VUE

```

<template>
  <div class="control-container">
    <ejs-appbar colorMode="Primary" mode="Dense">
      <ejs-button cssClass="e-inherit" iconCss="e-icons e-menu"></ejs-
button>
      <span class="dense">Dense AppBar</span>
      <div class="e-appbar-spacer"></div>
      <ejs-button cssClass="e-inherit">FREE TRIAL</ejs-button>
    </ejs-appbar>
  </div>
</template>
<script>
import Vue from "vue";
import { AppBarPlugin } from "@syncfusion/ej2-vue-navigations";
import { ButtonPlugin } from "@syncfusion/ej2-vue-buttons";
Vue.use(AppBarPlugin);
Vue.use(ButtonPlugin);
export default {
  data: function () {
    return {};
  }
};
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
.control-container .e-btn.e-inherit {
  margin: 0 3px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/appbar/getting-started-cs11" %}

## Color

The background and font colors can be set using the [colorMode](#) property. The available types of background color for the AppBar are as follows:

- Light AppBar
- Dark AppBar
- Primary AppBar
- Inherit AppBar

### Light AppBar

This color mode is the default one in which the AppBar can be displayed with a light background and its corresponding font color.

### APP.VUE

```
<template>
  <div class="control-container">
    <ejs-appbar>
      <a href="https://www.syncfusion.com/vue-components" target="_blank"
rel="noopener" role="link" aria-label="Syncfusion vue controls">
        <div class="syncfusion-logo"></div>
      </a>
      <div class="e-appbar-spacer"></div>
      <ejs-button :isPrimary="true">FREE TRIAL</ejs-button>
    </ejs-appbar>
  </div>
</template>
<script>
import Vue from "vue";
import { AppBarPlugin } from "@syncfusion/ej2-vue-navigations";
import { ButtonPlugin } from "@syncfusion/ej2-vue-buttons";
Vue.use(AppBarPlugin);
Vue.use(ButtonPlugin);
export default {
  data: function () {
    return {};
  }
};
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
.control-container .syncfusion-logo {
  background:
url(https://cdn.syncfusion.com/blazor/images/demos/syncfusion-logo.svg);
  background-size: contain;
  background-repeat: no-repeat;
  height: 30px;
  width: 150px;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/appbar/getting-started-cs12" %}

### Dark AppBar

This color mode can be set to the AppBar by setting **Dark** to the property [colorMode](#). A dark AppBar can be displayed with a dark background and its corresponding font color.

#### APP.VUE

```
<template>
  <div class="control-container">
    <ejs-appbar colorMode="Dark">
      <ejs-button cssClass="e-inherit" iconCss="e-icons e-menu"></ejs-
button>
      <div class="e-appbar-spacer"></div>
      <ejs-button cssClass="e-inherit">FREE TRIAL</ejs-button>
    </ejs-appbar>
  </div>
</template>
<script>
  import Vue from "vue";
  import { AppBarPlugin } from "@syncfusion/ej2-vue-navigations";
  import { ButtonPlugin } from "@syncfusion/ej2-vue-buttons";
  Vue.use(AppBarPlugin);
  Vue.use(ButtonPlugin);
  export default {
    data: function () {
      return {};
    }
  };
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
  .control-container .e-btn.e-inherit {
    margin: 0 3px;
  }
</style>
```

{% previewsample "page.domainurl/code-snippet/appbar/getting-started-cs13" %}

### Primary AppBar

This color mode can be set to the AppBar by setting **Primary** to the property [colorMode](#). The primary AppBar can be displayed with primary colors.

#### APP.VUE

```
<template>
  <div class="control-container">
    <ejs-appbar colorMode="Primary">
      <ejs-button cssClass="e-inherit" iconCss="e-icons e-menu"></ejs-
button>
      <div class="e-appbar-spacer"></div>
      <ejs-button cssClass="e-inherit">FREE TRIAL</ejs-button>
    </ejs-appbar>
  </div>
</template>
<script>
```

```

import Vue from "vue";
import { AppBarPlugin } from "@syncfusion/ej2-vue-navigations";
import { ButtonPlugin } from "@syncfusion/ej2-vue-buttons";
Vue.use(AppBarPlugin);
Vue.use(ButtonPlugin);
export default {
  data: function () {
    return {};
  }
};
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
.control-container .e-btn.e-inherit {
  margin: 0 3px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/appbar/getting-started-cs14" %}

### *Inherit AppBar*

This color mode can be set to the AppBar by setting **Inherit** to the property [colorMode](#). The AppBar inherits the background and font color from its parent element.

### **APP.VUE**

```

<template>
  <div class="control-container">
    <ejs-appbar colorMode="Inherit">
      <a href="https://www.syncfusion.com/vue-components" target="_blank"
        rel="noopener" role="link" aria-label="Syncfusion vue controls">
        <div class="syncfusion-logo"></div>
      </a>
      <div class="e-appbar-spacer"></div>
      <ejs-button :isPrimary="true">FREE TRIAL</ejs-button>
    </ejs-appbar>
  </div>
</template>
<script>
import Vue from "vue";
import { AppBarPlugin } from "@syncfusion/ej2-vue-navigations";
import { ButtonPlugin } from "@syncfusion/ej2-vue-buttons";
Vue.use(AppBarPlugin);
Vue.use(ButtonPlugin);
export default {
  data: function () {
    return {};
  }
};
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";

```

```
.control-container .syncfusion-logo {
  background:
url (https://cdn.syncfusion.com/blazor/images/demos/syncfusion-logo.svg);
  background-size: contain;
  background-repeat: no-repeat;
  height: 30px;
  width: 150px;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/appbar/getting-started-cs15" %}

### Position in Vue AppBar component

The position of the AppBar can be set using the [position](#) and [isSticky](#) property. The AppBar provides the following options for setting its position:

- Top AppBar
- Bottom AppBar
- Sticky AppBar

### Top AppBar

The top AppBar is the default one in which it positions the AppBar at the top of the content.

### APP.VUE

```
<template>
  <div class="control-container">
    <ejs-appbar colorMode="Primary">
      <ejs-button cssClass="e-inherit" iconCss="e-icons e-menu"></ejs-
button>
      <div class="e-appbar-spacer"></div>
      <ejs-button cssClass="e-inherit">FREE TRIAL</ejs-button>
    </ejs-appbar>
    <div class="appbar-content" style="font-size: 12px">
      <p>
        The AppBar also known as action bar or nav bar displays
        information and actions related to the current application screen. It is
        used to show branding, screen titles, navigation, and actions. The control
        supports height mode, color mode, positioning, and more.
      </p>
      <p>
        The AppBar control provides flexible ways to configure the look
        and feel of the bar to match your requirement.
      </p>
      <p>
        Developers can control the appearance and behaviors of the
        AppBar using a rich set of APIs.
      </p>
      <p>
        The AppBar component supports built-in themes such as Material,
        Bootstrap, Fabric (Office 365), Tailwind CSS, and high contrast. Users can
        customize these built-in themes or create new themes to achieve their
        desired look and feel by either simply overriding SASS variables or using
our Theme Studio application.
      </p>
    </div>
  </div>
```

## Design in Vue AppBar component

### Spacer

**Spacer** is used to provide spacing between the AppBar contents which gives additional space to the content layout.

The following example depicts the code to provide spacing between the home and pan buttons in the AppBar:

#### APP.VUE

```
<template>
  <div class="control-container">
    <ejs-appbar colorMode="Primary">
      <ejs-button cssClass="e-inherit" iconCss="e-icons e-home"></ejs-
button>
      <div class="e-appbar-spacer"></div>
      <ejs-button cssClass="e-inherit" iconCss="e-icons e-cut"></ejs-button>
      <div class="e-appbar-spacer"></div>
      <ejs-button cssClass="e-inherit" iconCss="e-icons e-pan"></ejs-button>
    </ejs-appbar>
  </div>
</template>
<script>
import Vue from "vue";
import { AppBarPlugin } from "@syncfusion/ej2-vue-navigations";
import { ButtonPlugin } from "@syncfusion/ej2-vue-buttons";
Vue.use(AppBarPlugin);
Vue.use(ButtonPlugin);
export default {
  data: function () {
    return {};
  }
};
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
</style>
```

{% previewsample "page.domainurl/code-snippet/appbar/getting-started-cs1" %}

### Separator

**Separator** shows a vertical line to visually group or separate the AppBar contents.

The following example depicts the code to provide a vertical line between a group of buttons in the AppBar.

#### APP.VUE

```
<template>
  <div class="control-container">
    <ejs-appbar colorMode="Primary">
      <ejs-button cssClass="e-inherit" iconCss="e-icons e-cut"></ejs-button>
      <ejs-button cssClass="e-inherit" iconCss="e-icons e-copy"></ejs-
button>
```

```

        <ejs-button cssClass="e-inherit" iconCss="e-icons e-paste"></ejs-
button>
        <div class="e-appbar-separator"></div>
        <ejs-button cssClass="e-inherit" iconCss="e-icons e-bold"></ejs-
button>
        <ejs-button cssClass="e-inherit" iconCss="e-icons e-underline"></ejs-
button>
        <ejs-button cssClass="e-inherit" iconCss="e-icons e-italic"></ejs-
button>
        <div class="e-appbar-separator"></div>
        <ejs-button cssClass="e-inherit" iconCss="e-icons e-align-left"></ejs-
button>
        <ejs-button cssClass="e-inherit" iconCss="e-icons e-align-
right"></ejs-button>
        <ejs-button cssClass="e-inherit" iconCss="e-icons e-align-
center"></ejs-button>
        <ejs-button cssClass="e-inherit" iconCss="e-icons e-justify"></ejs-
button>
    </ejs-appbar>
</div>
</template>
<script>
    import Vue from "vue";
    import { AppBarPlugin } from "@syncfusion/ej2-vue-navigations";
    import { ButtonPlugin } from "@syncfusion/ej2-vue-buttons";
    Vue.use(AppBarPlugin);
    Vue.use(ButtonPlugin);
    export default {
        data: function () {
            return {};
        }
    };
</script>
<style>
    @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
    @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
    @import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
    .control-container .e-btn.e-inherit {
        margin: 0 3px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/appbar/getting-started-cs2" %}

### Media Query

Media Query is used to adjusting the AppBar for different screen sizes. Resize the screen to observe the responsive layout of the AppBar.

### APP.VUE

```

<template>
    <div class="control-container">
        <ejs-appbar colorMode="Primary">
            <ejs-button cssClass="e-inherit" iconCss="e-icons e-menu"></ejs-
button>
            <ejs-button cssClass="e-inherit">Home</ejs-button>

```

```

    <ejs-button cssClass="e-inherit">About</ejs-button>
    <ejs-button cssClass="e-inherit">Products</ejs-button>
    <ejs-button cssClass="e-inherit">Contacts</ejs-button>
    <div class="e-appbar-spacer"></div>
    <div class="e-appbar-separator"></div>
    <ejs-button cssClass="e-inherit">Login</ejs-button>
  </ejs-appbar>
</div>
</template>
<script>
import Vue from "vue";
import { AppBarPlugin } from "@syncfusion/ej2-vue-navigations";
import { ButtonPlugin } from "@syncfusion/ej2-vue-buttons";
Vue.use(AppBarPlugin);
Vue.use(ButtonPlugin);
export default {
  data: function () {
    return {};
  }
};
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
.control-container .e-btn.e-inherit {
  margin: 0 3px;
}
@media screen and (max-width: 1024px) {
  .control-container .e-appbar {
    flex-flow: row wrap;
    height: auto;
    gap: 8px;
  }
  .control-container {
    width: 350px;
  }
}
@media screen and (max-width: 480px) {
  .control-container {
    width: 200px;
    margin: 0 2px;
  }
}
</style>

```

{% previewsample "page.domainurl/code-snippet/appbar/getting-started-cs3" %}

### Designing AppBar with Menu

AppBar is rendered with a Menu component in its AppBar header area. Menu component's styles are inherited from the AppBar component using the `e-inherit` CSS class.

### APP.VUE

```

<template>
  <div class="control-container">

```

```

    <ejs-appbar colorMode="Primary">
      <ejs-button cssClass="e-inherit" iconCss="e-icons e-menu"></ejs-
button>
      <ejs-menu cssClass="e-inherit" :items="companyMenuItems"></ejs-menu>
      <ejs-menu cssClass="e-inherit" :items="productMenuItems"></ejs-menu>
      <ejs-menu cssClass="e-inherit" :items="aboutMenuItems"></ejs-menu>
      <ejs-menu cssClass="e-inherit" :items="carrerMenuItems"></ejs-menu>
      <div class="e-appbar-spacer"></div>
      <ejs-button cssClass="e-inherit">Login</ejs-button>
    </ejs-appbar>
  </div>
</template>
<script>
  import Vue from "vue";
  import { AppBarPlugin, MenuPlugin } from "@syncfusion/ej2-vue-
navigations";
  import { ButtonPlugin } from "@syncfusion/ej2-vue-buttons";
  Vue.use(AppBarPlugin);
  Vue.use(MenuPlugin);
  Vue.use(ButtonPlugin);
  export default {
    data: function () {
      return {
        companyMenuItems: [
          {
            text : 'Company',
            items: [
              { text: 'About Us' },
              { text: 'Customers' },
              { text: 'Blog' },
              { text: 'Careers' }
            ]
          }
        ],
        productMenuItems: [
          {
            text : 'Products',
            items: [
              { text: 'Developer' },
              { text: 'Analytics' },
              { text: 'Reporting' },
              { text: 'Help Desk' }
            ]
          }
        ],
        aboutMenuItems: [
          {
            text : 'About Us'
          }
        ],
        carrerMenuItems: [
          {
            text : 'Carrers'
          }
        ]
      };
    }
  }

```

```

    };
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
  .control-container .e-btn.e-inherit {
    margin: 0 3px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/appbar/getting-started-cs4" %}

### Designing AppBar with Buttons

The AppBar is rendered with a Button and DropDownButton component in its AppBar header area.

Button and DropDownButton components' styles are inherited from the AppBar component using the `e-inherit` CSS class.

### APP.VUE

```

<template>
  <div class="control-container">
    <ejs-appbar colorMode="Primary">
      <ejs-button cssClass="e-inherit" iconCss="e-icons e-menu"></ejs-button>
      <ejs-dropdownbutton cssClass="e-inherit"
      :items="productDropDownButtonItem">Products</ejs-dropdownbutton>
      <div class="e-appbar-spacer"></div>
      <ejs-button cssClass="e-inherit">Login</ejs-button>
    </ejs-appbar>
  </div>
</template>
<script>
  import Vue from "vue";
  import { AppBarPlugin } from "@syncfusion/ej2-vue-navigations";
  import { DropDownButtonPlugin } from "@syncfusion/ej2-vue-splitbuttons";
  import { ButtonPlugin } from "@syncfusion/ej2-vue-buttons";
  Vue.use(AppBarPlugin);
  Vue.use(DropDownButtonPlugin);
  Vue.use(ButtonPlugin);
  export default {
    data: function () {
      return {
        productDropDownButtonItem: [
          { text: 'Developer' },
          { text: 'Analytics' },
          { text: 'Reporting' },
          { text: 'E-Signature' },
          { text: 'Help Desk' }
        ]
      };
    }
  };
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";

```

```

@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
@import "../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css";
.control-container .e-btn.e-inherit {
    margin: 0 3px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/appbar/buttons-cs1" %}

### Designing AppBar with SideBar

The AppBar is rendered with the SideBar component below the AppBar. Click on the menu icon to expand/collapse the Sidebar. In the following sample, the `toggle` method has been used to show or hide the Sidebar on the AppBar button click.

#### APP.VUE

```

<template>
  <div id="wrapper" class="control-section">
    <div id="reswrapper">
      <div>
        <ejs-appbar>
          <ejs-button id="button" cssClass="e-inherit" iconCss="e-icons e-menu"></ejs-button>
          <div class="e-folder">
            <div class="e-folder-name">Navigation Pane</div>
          </div>
        </ejs-appbar>
      </div>
      <ejs-sidebar id="sideTree" class="sidebar-treeview"
        ref="sidebarTreeviewInstance" width="220px" target=".main-sidebar-content"
        mediaQuery="(min-width: 600px)" :isOpen="true">
        <div class='main-menu'>
          <div class="table-content">
            <ejs-textbox id="resSearch"
              placeholder="Search..."></ejs-textbox>
            <p class="main-menu-header">TABLE OF CONTENTS</p>
          </div>
          <div>
            <ejs-treeview id='mainTree' cssClass="main-treeview"
              :fields="fields" expandOn='Click'>
            </ejs-treeview>
          </div>
        </div>
      </ejs-sidebar>
      <div class="main-sidebar-content" id="main-text">
        <div class="sidebar-content">
          <div class="sidebar-heading"> Responsive Sidebar with
            Treeview</div>
          <p class="paragraph-content">
            This is a graphical aid for visualising and categorising
            the site, in the style of an expandable and collapsable treeview component.
            It auto-expands to display the node(s), if any,
            corresponding to the currently viewed title, highlighting that node(s)

```

and its ancestors. Load-on-demand when expanding nodes is available where supported (most graphical browsers), falling back to a full-page reload. MediaWiki-supported caching, aside from squid, has been considered so that unnecessary re-downloads of content are avoided where possible. The complete expanded/collapsed state of the treeview persists across page views in most situations.

```

        </p>
      </div>
    </div>
  </div>
</template>
<script>
  import Vue from "vue";

.sidebar-treeview .main-menu .main-menu-header {
    color: #656a70;
    padding: 15px 15px 15px 0;
    font-size: 14px;
    width: 13em;
    margin: 0;
}
#main-text .sidebar-heading {
    font-size: 16px;
}
.sidebar-treeview .table-content {
    padding: 20px 14px;
    height: 8em;
}
#main-text .sidebar-content .line {
    width: 100%;
    height: 1px;
    border-bottom: 1px dashed #ddd;
    margin: 40px 0;
}
#main-text .sidebar-content {
    padding: 15px;
    font-size: 14px;
}
#main-text .paragraph-content {
    padding: 15px 0;
    font-weight: normal;
    font-size: 14px;
}
.e-folder {
    text-align: center;
    font-weight: 500;
    font-size: 16px

```

```

}
.e-folder-name {
  margin-top: 1px;
}
.sidebar-treeview .e-treeview .e-icon-collapsible,
.sidebar-treeview .e-treeview .e-icon-expandable {
  float: right;
  margin: 3px;
}
.sidebar-treeview .e-treeview,
.sidebar-treeview .e-treeview .e-ul {
  padding: 0;
  margin: 0;
}
.sidebar-treeview .e-treeview .e-text-content {
  padding-left: 14px;
}
#wrapper .e-appbar {
  border-bottom: 1px solid #eaeaea0;
}
.sidebar-treeview {
  border-right: 1px solid #eaeaea0;
}
#reswrapper{
  border: 1px solid #d7d7d7;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/appbar/sidebar-cs1" %}

### Style and appearance in Vue AppBar component

To modify the AppBar appearance, you need to override the default CSS of the AppBar component. Please find the list of CSS classes and their corresponding sections in the AppBar component. Also, you have an option to create your own custom theme for the controls using our [Theme Studio](#).

| CSS Class | Purpose of Class |

|-----|-----|

| .e-appbar | To customize the appbar. |

| .e-appbar.e-prominent | To customize the prominent appbar. |

| .e-appbar.e-dense | To customize the dense appbar. |

| .e-appbar.e-light | To customize the light appbar. |

| .e-appbar.e-dark | To customize the dark appbar. |

| .e-appbar.e-primary | To customize the dark appbar. |

| .e-appbar.e-inherit | To customize the inherit appbar. |

Note: You can change the prominent AppBar height if larger titles, images, or texts are used.

### CssClass

CssClass is used for AppBar customization based on the custom class. In the example below, the AppBar background and color are customized using the [cssClass](#) property.

**APP.VUE**

```

<template>
  <div class="control-container">
    <ejs-appbar colorMode="Primary" cssClass="custom-appbar">
      <ejs-button cssClass="e-inherit" iconCss="e-icons e-home"></ejs-
button>
    </ejs-appbar>
  </div>
</template>
<script>
  import Vue from "vue";
  import { AppBarPlugin } from "@syncfusion/ej2-vue-navigations";
  import { ButtonPlugin } from "@syncfusion/ej2-vue-buttons";
  Vue.use(AppBarPlugin);
  Vue.use(ButtonPlugin);
  export default {
    data: function () {
      return {};
    }
  };
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
  .control-container .e-appbar.custom-appbar {
    background: #ff0000;
    color: #fff;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/appbar/getting-started-cs16" %}

**HtmlAttributes**

It can be used for additional inline attributes by specifying as inline attributes or by specifying htmlAttributes directive. In the code example below, the aria-label of the AppBar is customized by specifying as attributes.

**APP.VUE**

```

<template>
  <div class="control-container">
    <ejs-appbar colorMode="Primary" aria-label="appbar">
      <ejs-button cssClass="e-inherit" iconCss="e-icons e-home"></ejs-
button>
    </ejs-appbar>
  </div>
</template>
<script>
  import Vue from "vue";
  import { AppBarPlugin } from "@syncfusion/ej2-vue-navigations";
  import { ButtonPlugin } from "@syncfusion/ej2-vue-buttons";
  Vue.use(AppBarPlugin);
  Vue.use(ButtonPlugin);
  export default {

```

```

    data: function () {
      return {};
    }
  };
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
</style>

```

```
{% previewsample "page.domainurl/code-snippet/appbar/getting-started-cs17" %}
```

## AutoComplete

### Getting Started with the Vue Auto complete Component in Vue 2

This article provides a step-by-step guide for setting up a Vue 2 project using [Vue-CLI](#) and integrating the Syncfusion Vue Auto complete component using the [Composition API](#) / [Options API](#)[Link to the Video](#).

#### Prerequisites

[System requirements for Syncfusion Vue UI components](#)

#### Dependencies

The list of dependencies required to use the AutoComplete component in your application is given below:

```

`javascript
|-- @syncfusion/ej2-vue-dropdowns
|-- @syncfusion/ej2-base
|-- @syncfusion/ej2-dropdowns
|-- @syncfusion/ej2-data
|-- @syncfusion/ej2-inputs
|-- @syncfusion/ej2-lists
|-- @syncfusion/ej2-navigations
|-- @syncfusion/ej2-popups
|-- @syncfusion/ej2-buttons
`

```

#### Setting up the Vue 2 project

To generate a Vue 2 project using Vue-CLI, use the [vue create](#) command. Follow these steps to install Vue CLI and create a new project:

```

`bash
npm install -g @vue/cli
vue create quickstart
cd quickstart

```

```
npm run serve
```

```
,
```

```
or
```

```
`bash
```

```
yarn global add @vue/cli
```

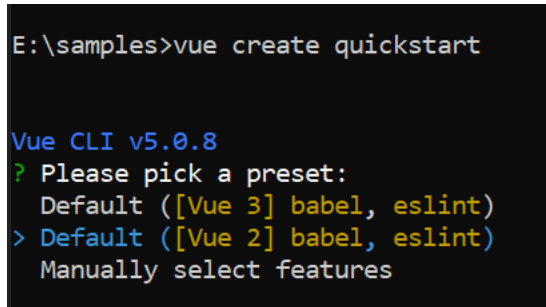

```
vue create quickstart
```

```
cd quickstart
```

```
yarn run serve
```

```
,
```

When creating a new project, choose the option `Default ([Vue 2] babel, eslint)` from the menu.

```
E:\samples>vue create quickstart

Vue CLI v5.0.8
? Please pick a preset:
  Default ([Vue 3] babel, eslint)
> Default ([Vue 2] babel, eslint)
  Manually select features
```

Once the `quickstart` project is set up with default settings, proceed to add Syncfusion components to the project.

### Add Syncfusion Vue packages

Syncfusion packages are available at [npmjs.com](https://www.npmjs.com). To use Vue components, install the required npm package.

This article uses the [Vue Auto complete component](#) as an example. Install the `@syncfusion/ej2-vue-dropdowns` package by running the following command:

```
`bash
```

```
npm install @syncfusion/ej2-vue-dropdowns --save
```

```
,
```

```
or
```

```
`bash
```

```
yarn add @syncfusion/ej2-vue-dropdowns
```

```
,
```

### Import Syncfusion CSS styles

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, [CRG](#) and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to themes in a Vue project.

In this article, the **Material** theme is applied using CSS styles, which are available in installed packages. The necessary **Material** CSS styles for the Auto complete component and its dependents were imported into the `<style>` section of **src/App.vue** file.

#### ~/SRC/APP.VUE

```
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-dropdowns/styles/material.css";
</style>
```

#### Add Syncfusion Vue component

Follow the below steps to add the Vue Auto complete component using **Composition API** or **Options API**:

1\ First, import and register the Auto complete component in the **script** section of the **src/App.vue** file. If you are using the **Composition API**, you should add the **setup** attribute to the **script** tag to indicate that Vue will be using the **Composition API**.

#### COMPOSITION API (~/SRC/APP.VUE)

```
<script setup>
import { AutoCompleteComponent as EjsAutocomplete } from '@syncfusion/ej2-vue-dropdowns';
</script>
```

#### OPTIONS API (~/SRC/APP.VUE)

```
<script>
import { AutoCompleteComponent } from '@syncfusion/ej2-vue-dropdowns';
export default {
  components: {
    'ejs-autocomplete': AutoCompleteComponent
  }
}
</script>
```

#### Binding data source

After initialization, populate the AutoComplete with data using the **dataSource** property. Here, an array of string values is passed to the AutoComplete component.

#### COMPOSITION API (~/SRC/APP.VUE)

```
<template>
<div id="app">
<ejs-autocomplete :dataSource='sportsData' :placeholder="waterMark"></ejs-autocomplete>
</div>
</template>
<script setup>
import { AutoCompleteComponent as EjsAutocomplete } from '@syncfusion/ej2-vue-dropdowns';
const waterMark = 'e.g. Basketball';
```

```
const sportsData = ['American Football', 'Badminton', 'Basketball',
  'Cricket',
  'Football', 'Golf', 'Gymnastics',
  'Hockey', 'Rugby', 'Snooker', 'Tennis'
];
</script>
```

### OPTIONS API (~SRC/APP.VUE)

```
</template>
<script>
import { AutoCompleteComponent } from '@syncfusion/ej2-vue-dropdowns';
export default {
  components: {
    'ejs-autocomplete': AutoCompleteComponent
  },
  name: 'app',
  data () {
    return {
      waterMark : 'e.g. Basketball',
      sportsData: ['American Football', 'Badminton', 'Basketball', 'Cricket',
        'Football', 'Golf', 'Gymnastics',
        'Hockey', 'Rugby', 'Snooker', 'Tennis'
      ]
    }
  }
}
</script>
```

Here is the summarized code for the above steps in the **src/App.vue** file:

### COMPOSITION API (~SRC/APP.VUE)

```
<template>
  <div id="app">
    <ejs-autocomplete :dataSource='sportsData'
    :placeholder="waterMark"></ejs-autocomplete>
  </div>
</template>
<script setup>
import { AutoCompleteComponent as EjsAutocomplete } from '@syncfusion/ej2-vue-dropdowns';
const waterMark = 'e.g. Basketball';
const sportsData = ['American Football', 'Badminton', 'Basketball',
  'Cricket',
    'Football', 'Golf', 'Gymnastics',
    'Hockey', 'Rugby', 'Snooker', 'Tennis'
  ];
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-dropdowns/styles/material.css";
#app {
  color: #008cff;
  height: 40px;
}
```

```
    left: 35%;
    position: absolute;
    top: 35%;
    width: 30%;
  }
</style>
```

### OPTIONS API (~SRC/APP.VUE)

```
<template>
  <div id="app">
    <ejs-autocomplete :dataSource='sportsData'
:placeholder="waterMark"></ejs-autocomplete>
  </div>
</template>
<script>
import { AutoCompleteComponent } from '@syncfusion/ej2-vue-dropdowns';
export default {
  components: {
    'ejs-autocomplete': AutoCompleteComponent
  },
  name: 'app',
  data () {
    return {
      waterMark : 'e.g. Basketball',
      sportsData: ['American Football', 'Badminton', 'Basketball',
'Cricket',
                  'Football', 'Golf', 'Gymnastics',
                  'Hockey', 'Rugby', 'Snooker', 'Tennis'
    ]
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-dropdowns/styles/material.css";
#app {
  color: #008cff;
  height: 40px;
  left: 35%;
  position: absolute;
  top: 35%;
  width: 30%;
}
</style>
```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run serve
```

```
`
```

or

```
`bash
```

```
yarn run serve
```

```
,
```

```
{% previewsample "page.domainurl/code-snippet/auto-complete/getting-started-cs11" %}
```

### Custom values

The AutoComplete allows the user to give input as custom value which is not required to present in predefined set of values. By default, this support is enabled by [allowCustom](#) property. The custom value will be sent to post back handler when a form is about to be submitted.

### COMPOSITION API (~SRC/APP.VUE)

```
<template>
  <div id="app">
    <ejs-autocomplete :dataSource='sportsData' :placeholder="waterMark"
  ></ejs-autocomplete>
  </div>
</template>
<script setup>
import { AutoCompleteComponent as EjsAutocomplete } from '@syncfusion/ej2-
vue-dropdowns';
const waterMark = 'Find a game';
const sportsData = ['Badminton', 'Basketball', 'Cricket',
                    'Football', 'Golf', 'Gymnastics',
                    'Hockey', 'Rugby', 'Snooker', 'Tennis'
                    ];
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-dropdowns/styles/material.css";
#app {
  color: #008cff;
  height: 40px;
  left: 35%;
  position: absolute;
  top: 35%;
  width: 30%;
}
</style>
```

### OPTIONS API (~SRC/APP.VUE)

```
<template>
  <div id="app">
    <ejs-autocomplete :dataSource='sportsData' :placeholder="waterMark"
  ></ejs-autocomplete>
  </div>
</template>
<script>
import { AutoCompleteComponent } from '@syncfusion/ej2-vue-dropdowns';
export default {
```

```

components: {
  'ejs-autocomplete': AutoCompleteComponent
},
name: 'app',
data () {
  return {
    waterMark : 'Find a game',
    allowCustom: true,
    sportsData: ['Badminton', 'Basketball', 'Cricket',
                  'Football', 'Golf', 'Gymnastics',
                  'Hockey', 'Rugby', 'Snooker', 'Tennis'
                ]
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-dropdowns/styles/material.css";
#app {
  color: #008cff;
  height: 40px;
  left: 35%;
  position: absolute;
  top: 35%;
  width: 30%;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/auto-complete/getting-started-cs12" %}

### Configure the suggestion list

By default, suggestion list width automatically adjusts according to the AutoComplete input element's width, and the height of the suggestion list has '300px'. The height and width of the popup list can also be customized using the [popupHeight](#) and [popupWidth](#) property respectively. In the following sample, suggestion list's width and height are configured.

### COMPOSITION API (~SRC/APP.VUE)

```

<template>
  <div id="app">
    <ejs-autocomplete :dataSource='sportsData' :popupHeight='height'
    :popupWidth='width' :placeholder="waterMark" ></ejs-autocomplete>
  </div>
</template>
<script setup>
import { AutoCompleteComponent as EjsAutocomplete } from '@syncfusion/ej2-vue-dropdowns';
const waterMark = 'Find a game';
const height = '250px';
const width = '250px';
const sportsData = ['Badminton', 'Basketball', 'Cricket',
                     'Football', 'Golf', 'Gymnastics',
                     'Hockey', 'Rugby', 'Snooker', 'Tennis'
                    ];

```

```

</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-dropdowns/styles/material.css";
#app {
  color: #008cff;
  height: 40px;
  left: 35%;
  position: absolute;
  top: 35%;
  width: 30%;
}
</style>

```

### OPTIONS API (~SRC/APP.VUE)

```

<template>
  <div id="app">
    <ejs-autocomplete :dataSource='sportsData' :popupHeight='height'
:popupWidth='width' :placeholder="waterMark" ></ejs-autocomplete>
  </div>
</template>
<script>
import { AutoCompleteComponent } from '@syncfusion/ej2-vue-dropdowns';
export default {
  components: {
    'ejs-autocomplete': AutoCompleteComponent
  },
  name: 'app',
  data () {
    return {
      waterMark : 'Find a game',
      allowCustom: true,
      height: '250px',
      width: '250px',
      sportsData: ['Badminton', 'Basketball', 'Cricket',
        'Football', 'Golf', 'Gymnastics',
        'Hockey', 'Rugby', 'Snooker', 'Tennis'
      ]
    }
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-dropdowns/styles/material.css";
#app {
  color: #008cff;
  height: 40px;
  left: 35%;
  position: absolute;
  top: 35%;
  width: 30%;
}

```

```
</style>
```

```
{% previewsample "page.domainurl/code-snippet/auto-complete/getting-started-cs13" %}
```

**Note:** You can refer to our [Vue AutoComplete](#) feature tour page for its groundbreaking feature representations. You can also explore our [Vue AutoComplete example](#) to know how to render and configure the autocomplete.

## Getting Started with the Vue AutoComplete Component in Vue 3

This article provides a step-by-step guide for setting up a [Vite](#) project with a JavaScript environment and integrating the Syncfusion Vue AutoComplete component using the [Composition API](#) / [Options API](#).

The **Composition API** is a new feature introduced in Vue.js 3 that provides an alternative way to organize and reuse component logic. It allows developers to write components as functions that use smaller, reusable functions called composition functions to manage their properties and behavior.

The **Options API** is the traditional way of writing Vue.js components, where the component logic is organized into a series of options that define the component's properties and behavior. These options include data, methods, computed properties, watchers, lifecycle hooks, and more.

### Prerequisites

#### [System requirements for Syncfusion Vue UI components](#)

#### Set up the Vite project

A recommended approach for beginning with Vue is to scaffold a project using [Vite](#). To create a new Vite project, use one of the commands that are specific to either NPM or Yarn.

```
`bash
```

```
npm create vite@latest
```

```
,
```

or

```
`bash
```

```
yarn create vite
```

```
,
```

Using one of the above commands will lead you to set up additional configurations for the project as below:

1. Define the project name: We can specify the name of the project directly. Let's specify the name of the project as **my-project** for this article.

```
`bash
```

```
? Project name: » my-project
```

```
,
```

2. Select **Vue** as the framework. It will create a Vue 3 project.

```
`bash
```

? Select a framework: » - Use arrow-keys. Return to submit.

Vanilla

Vue

React

Preact

Lit

Svelte

Others

,

3. Choose **JavaScript** as the framework variant to build this Vite project using JavaScript and Vue.

```
`bash
```

? Select a variant: » - Use arrow-keys. Return to submit.

JavaScript

TypeScript

Customize with create-vue ↗

Nuxt ↗

,

4. Upon completing the aforementioned steps to create the **my-project**, run the following command to install its dependencies:

```
`bash
```

```
cd my-project
```

```
npm install
```

,

or

```
`bash
```

```
cd my-project
```

```
yarn install
```

,

Now that **my-project** is ready to run with default settings, let's add Syncfusion components to the project.

### Add Syncfusion Vue packages

Syncfusion Vue component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion Vue components in the project, install the corresponding npm package.

This article uses the [Vue AutoComplete component](#) as an example. To use the Vue AutoComplete component in the project, the `@syncfusion/ej2-vue-dropdowns` package needs to be installed using the following command:

```
`bash
```

```
npm install @syncfusion/ej2-vue-dropdowns --save
```

```
,
```

or

```
`bash
```

```
yarn add @syncfusion/ej2-vue-dropdowns
```

```
,
```

### Import Syncfusion CSS styles

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, [CRG](#) and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to themes in a Vue project.

In this article, `Material` theme is applied using CSS styles, which are available in installed packages. The necessary `Material` CSS styles for the AutoComplete component and its dependents were imported into the `<style>` section of `src/App.vue` file.

#### ~/SRC/APP.VUE

```
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-dropdowns/styles/material.css";
</style>
```

The order of importing CSS styles should be in line with its dependency graph.

### Add Syncfusion Vue component

Follow the below steps to add the Vue AutoComplete component using `Composition API` or `Options API`:

1.First, import and register the AutoComplete component in the `script` section of the `src/App.vue` file. If you are using the `Composition API`, you should add the `setup` attribute to the `script` tag to indicate that Vue will be using the `Composition API`.

#### COMPOSITION API (~/SRC/APP.VUE)

```
<script setup>
import { AutoCompleteComponent as EjsAutocomplete } from "@syncfusion/ej2-
vue-dropdowns";
</script>
```

**OPTIONS API (~SRC/APP.VUE)**

```
<script>
import { AutoCompleteComponent } from "@syncfusion/ej2-vue-dropdowns";
//Component registration
export default {
  name: "App",
  components: {
    'ejs-autocomplete' : AutoCompleteComponent,
  }
}
</script>
```

2. In the **template** section, define the AutoComplete component with the [dataSource](#) property and column definitions.

**~/SRC/APP.VUE**

```
<template>
<div class="control_wrapper">
<ejs-autocomplete :dataSource='sportsData' :placeholder="waterMark"></ejs-
autocomplete>
</div>
</template>
```

Here is the summarized code for the above steps in the **src/App.vue** file:

**COMPOSITION API (~SRC/APP.VUE)**

```
<template>
<div class="control_wrapper">
<ejs-autocomplete :dataSource='data[0].sportsData'
:placeholder="data[0].waterMark"></ejs-autocomplete>
</div>
</template>
<script setup>
import { AutoCompleteComponent as EjsAutocomplete } from "@syncfusion/ej2-
vue-dropdowns";
const data = [{ waterMark : 'e.g. Basketball',
sportsData: ['American Football', 'Badminton', 'Basketball', 'Cricket',
'Football', 'Golf', 'Gymnastics',
'Hockey', 'Rugby', 'Snooker', 'Tennis'
]}]
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-dropdowns/styles/material.css";
</style>
```

**OPTIONS API (~SRC/APP.VUE)**

```
<template>
<div class="control_wrapper">
<ejs-autocomplete :dataSource='sportsData' :placeholder="waterMark"></ejs-
autocomplete>
```

```
</div>
</template>
<script>
import { AutoCompleteComponent } from "@syncfusion/ej2-vue-dropdowns";
//Component registration
export default {
  name: 'App',
  components: {
    "ejs-autocomplete": AutoCompleteComponent
  },
  data () {
    return {
      waterMark : 'e.g. Basketball',
      sportsData: ['American Football', 'Badminton', 'Basketball', 'Cricket',
        'Football', 'Golf', 'Gymnastics',
        'Hockey', 'Rugby', 'Snooker', 'Tennis'
      ]
    }
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-dropdowns/styles/material.css";
</style>
```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run dev
```

```
,
```

or

```
`bash
```

```
yarn run dev
```

```
,
```

### Custom values

The AutoComplete allows the user to give input as custom value which is not required to present in predefined set of values. By default, this support is enabled by [allowCustom](#) property. The custom value will be sent to post back handler when a form is about to be submitted.

### COMPOSITION API (~SRC/APP.VUE)

```
<template>
<div id="app">
<ejs-autocomplete :dataSource='data[0].sportsData'
:placeholder="data[0].waterMark" :allowcuston="data[0].allowcustom"></ejs-
autocomplete>
</div>
</template>
```

```

<script setup>
import { AutoCompleteComponent as EjsAutocomplete } from "@syncfusion/ej2-vue-dropdowns";
const data = [{ waterMark : 'Find a game',
sportsData: ['Badminton', 'Basketball', 'Cricket',
'Football', 'Golf', 'Gymnastics',
'Hockey', 'Rugby', 'Snooker', 'Tennis'],
allowcuston: true }]
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-dropdowns/styles/material.css";
#app {
color: #008c8f;
height: 40px;
left: 35%;
position: absolute;
top: 35%;
width: 30%;
}
</style>

```

### OPTIONS API (~SRC/APP.VUE)

```

<template>
<div id="app">
<ejs-autocomplete :dataSource='sportsData' :placeholder="waterMark"
:allowcuston="allowcuston"></ejs-autocomplete>
</div>
</template>
<script>
import { AutoCompleteComponent } from "@syncfusion/ej2-vue-dropdowns";
//Component registration
export default {
name: 'App',
components: {
"ejs-autocomplete": AutoCompleteComponent
},
data () {
return {
allowcuston: true,
waterMark : 'Find a game',
sportsData: ['Badminton', 'Basketball', 'Cricket',
'Football', 'Golf', 'Gymnastics',
'Hockey', 'Rugby', 'Snooker', 'Tennis'
]
}
}
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-dropdowns/styles/material.css";
#app {

```

```

color: #008cff;
height: 40px;
left: 35%;
position: absolute;
top: 35%;
width: 30%;
}
</style>

```

### Configure the suggestion list

By default, suggestion list width automatically adjusts according to the AutoComplete input element's width, and the height of the suggestion list has '300px'. The height and width of the popup list can also be customized using the [popupHeight](#) and [popupWidth](#) property respectively. In the following sample, suggestion list's width and height are configured.

#### COMPOSITION API (~SRC/APP.VUE)

```

<template>
<div id="app">
<ejs-autocomplete :dataSource='data[0].sportsData'
:popupHeight='data[0].height' :popupWidth='data[0].width'
:placeholder="data[0].waterMark" ></ejs-autocomplete>
</div>
</template>
<script setup>
import { AutoCompleteComponent as EjsAutocomplete } from "@syncfusion/ej2-
vue-dropdowns";
const data = [{ waterMark : 'Find a game',
height: '250px',
width: '250px',
sportsData: ['Badminton', 'Basketball', 'Cricket',
'Football', 'Golf', 'Gymnastics',
'Hockey', 'Rugby', 'Snooker', 'Tennis']}]
</script>
<style>

- [How to bind the data](#)

### Data binding in Vue Auto complete component

The AutoComplete loads the data either from local data sources or remote data services using the [dataSource](#) property. It supports the data type of array or DataManager. The AutoComplete also

supports different kind of data services such as OData, OData V4, Web API and data formats such as XML, JSON, JSONP with the help of DataManager Adaptors.

| Fields | Type | Description |

|-----|-----|-----|

| value | number or string | Specifies the hidden data value mapped to each list item that should contain a unique value. |

| groupBy | string | Specifies the category under which the list item has to be grouped. |

| iconCss | string | Specifies the icon class of each list item |

While binding complex data to AutoComplete, fields should be mapped correctly. Otherwise, the selected item remains undefined.

### Bind to local data

Local data can be represented in two ways, they are as follows:

#### Array of string

The AutoComplete has support to load array of primitive data such as strings and numbers.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-autocomplete :dataSource='sportsData' :placeholder="waterMark"
  ></ejs-autocomplete>
  </div>
</template>
<script>
import Vue from 'vue';
import { AutoCompletePlugin } from '@syncfusion/ej2-vue-dropdowns';
Vue.use(AutoCompletePlugin);
export default {
  name: 'app',
  data () {
    return {
      waterMark : 'Find a game',
      allowCustom: true,
      sportsData: ['Badminton', 'Basketball', 'Cricket',
        'Football', 'Golf', 'Gymnastics',
        'Hockey', 'Rugby', 'Snooker', 'Tennis'
      ]
    }
  }
}
</script>
<style>
@import "../../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../../node_modules/@syncfusion/ej2-vue-
dropdowns/styles/material.css";
#app {
  color: #008cff;
  height: 40px;
  left: 35%;
}
```

```

    position: absolute;
    top: 35%;
    width: 30%;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/auto-complete/getting-started-cs2" %}

### Array of object

The AutoComplete can generate its list items through an array of complex data. For this, the appropriate columns should be mapped to the `fields` property.

In the following example, Game column from complex data have been mapped to the value field.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-autocomplete :dataSource='sportsData' :fields='fields'
    :placeholder="waterMark" ></ejs-autocomplete>
  </div>
</template>
<script>
import Vue from 'vue';
import { AutoCompletePlugin } from '@syncfusion/ej2-vue-dropdowns';
Vue.use(AutoCompletePlugin);
export default {
  name: 'app',
  data () {
    return {
      waterMark : 'Find a game',
      sportsData: [
        { Id: 'Game1', Game: 'Badminton' },
        { Id: 'Game2', Game: 'Basketball' },
        { Id: 'Game3', Game: 'Cricket' },
        { Id: 'Game4', Game: 'Football' },
        { Id: 'Game5', Game: 'Golf' },
        { Id: 'Game6', Game: 'Hockey' },
        { Id: 'Game7', Game: 'Rugby' },
        { Id: 'Game8', Game: 'Snooker' }
      ],
      fields: { value: 'Game' }
    }
  }
}
</script>
<style>
@import "../../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../../node_modules/@syncfusion/ej2-vue-
dropdowns/styles/material.css";
#app {
  color: #008c8f;
  height: 40px;
  left: 35%;
  position: absolute;

```

```

    top: 35%;
    width: 30%;
  }
</style>

```

```
{% previewsample "page.domainurl/code-snippet/auto-complete/getting-started-cs3" %}
```

### Array of complex object

The AutoComplete can generate its list items through an array of complex data. For this, the appropriate columns should be mapped to the `fields` property. In the following example, `Country.Name` column from complex data have been mapped to the value field.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-autocomplete :dataSource='countriesData' :fields='fields'
    :placeholder="waterMark" ></ejs-autocomplete>
  </div>
</template>
<script>
import Vue from 'vue';
import { AutoCompletePlugin } from '@syncfusion/ej2-vue-dropdowns';
Vue.use(AutoCompletePlugin);
export default {
  name: 'app',
  data () {
    return {
      waterMark : 'Find a country',
      countriesData: [
        { Country: { Name: 'Australia' }, Code: { Id: 'AU' } },
        { Country: { Name: 'Bermuda' }, Code: { Id: 'BM' } },
        { Country: { Name: 'Canada' }, Code: { Id: 'CA' } },
        { Country: { Name: 'Cameroon' }, Code: { Id: 'CM' } },
        { Country: { Name: 'Denmark' }, Code: { Id: 'DK' } },
        { Country: { Name: 'France' }, Code: { Id: 'FR' } },
        { Country: { Name: 'Finland' }, Code: { Id: 'FI' } },
        { Country: { Name: 'Germany' }, Code: { Id: 'DE' } },
        { Country: { Name: 'Greenland' }, Code: { Id: 'GL' } },
        { Country: { Name: 'Hong Kong' }, Code: { Id: 'HK' } },
        { Country: { Name: 'India' }, Code: { Id: 'IN' } },
        { Country: { Name: 'Italy' }, Code: { Id: 'IT' } },
        { Country: { Name: 'Japan' }, Code: { Id: 'JP' } },
        { Country: { Name: 'Mexico' }, Code: { Id: 'MX' } },
        { Country: { Name: 'Norway' }, Code: { Id: 'NO' } },
        { Country: { Name: 'Poland' }, Code: { Id: 'PL' } },
        { Country: { Name: 'Switzerland' }, Code: { Id: 'CH' } },
        { Country: { Name: 'United Kingdom' }, Code: { Id: 'GB' } },
        { Country: { Name: 'United States' }, Code: { Id: 'US' } }
      ],
      fields: { value: 'Country.Name' }
    }
  }
}
</script>
<style>

```

```
@import "../../../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../../../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../../../node_modules/@syncfusion/ej2-vue-
dropdowns/styles/material.css";
#app {
  color: #008cff;
  height: 40px;
  left: 35%;
  position: absolute;
  top: 10%;
  width: 30%;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/auto-complete/getting-started-cs4" %}

### Bind to remote data

The AutoComplete supports retrieval of data from remote data services with the help of **DataManager** component. The Query property is used to fetch data from the database and bind it to the AutoComplete. The following sample displays the first 6 contacts from the Customers table of the Northwind data service.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-autocomplete :dataSource='data' :fields='fields'
    sortOrder='sortOrder' :query='query' :placeholder="waterMark" ></ejs-
    autocomplete>
  </div>
</template>
<script>
import Vue from 'vue';
import { AutoCompletePlugin } from '@syncfusion/ej2-vue-dropdowns';
import { Query, DataManager, ODataV4Adaptor } from '@syncfusion/ej2-data';
Vue.use(AutoCompletePlugin);
var remoteData = new DataManager({
  url: 'https://services.odata.org/V4/Northwind/Northwind.svc/Customers',
  adaptor: new ODataV4Adaptor,
  crossDomain: true
});
export default {
  name: 'app',
  data () {
    return {
      waterMark : 'Find a customer',
      data: remoteData,
      fields: { value: 'ContactName' },
      query: new Query().select(['ContactName', 'CustomerID']),
      sortOrder: 'Ascending'
    }
  }
}
</script>
<style>
@import "../../../node_modules/@syncfusion/ej2-base/styles/material.css";
```

```
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
dropdowns/styles/material.css";
#app {
  color: #008cff;
  height: 40px;
  left: 35%;
  position: absolute;
  top: 12%;
  width: 30%;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/auto-complete/getting-started-cs5" %}

## Templates in Vue Auto complete component

The AutoComplete has been provided with several options to customize each list items, group title, header and footer elements. It uses the Essential JS 2 Template engine to compile and render the elements properly.

### Item template

The content of each list item within the AutoComplete can be customized with the help of [itemTemplate](#) property.

In the following sample, each list item is split into two columns to display relevant data's.

### APP.VUE

```
<template>
  <div id="app">
    <div class='autocomplete'>
      <ejs-autocomplete id='employees' :query='query' :dataSource='data'
      :fields='fields' :placeholder='waterMark' :sortOrder='sortOrder'
      :itemTemplate='iTemplate' popupHeight="450px"></ejs-autocomplete>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
import { AutoCompletePlugin } from '@syncfusion/ej2-vue-dropdowns';
import { Query, DataManager, ODataV4Adaptor } from '@syncfusion/ej2-data';
Vue.use(AutoCompletePlugin);
var itemVue = Vue.component("itemTemplate", {
  template: `<span><span class='name'>{{data.FirstName}}</span><span class
='city'>{{data.City}}</span></span>`,
  data() {
    return {
      data: {}
    };
  }
});
```

```

    }
  });
  var remoteData = new DataManager({
    url: 'https://services.odata.org/V4/Northwind/Northwind.svc',
    adaptor: new ODataV4Adaptor,
    crossDomain: true
  });
  export default {
    name: 'app',
    data () {
      return {
        fields: { value: 'FirstName' },
        waterMark: 'Find an employee',
        sortOrder: 'Ascending',
        data: remoteData,
        iTemplate: function(e) {
          return {
            template: itemVue
          };
        },
        query: new Query().from('Employees').select(['FirstName', 'City',
        'EmployeeID']).take(6),
      }
    }
  }
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-dropdowns/styles/material.css";
#app {
  color: #008cff;
  height: 40px;
  position: absolute;
  width: 90%;
  top: 10%;
}
.autocomplete {
  width: 30%;
  margin: 0 auto;
}
.city{
  right: 15px;
  position: absolute;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/auto-complete/getting-started-cs20" %}

### Group template

The group header title under which appropriate sub-items are categorized can also be customize with the help of [groupTemplate](#) property. This template is common for both inline and floating group header template.

In the following sample, employees are grouped according to their city.

**APP.VUE**

```

<template>
  <div id="app">
    <div class='autocomplete'>
      <ejs-autocomplete id='employees' :query='query' :dataSource='data'
:fields='fields' :placeholder='waterMark' :sortOrder='sortOrder'
:groupTemplate='gTemplate' popupHeight="450px"></ejs-autocomplete>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
import { AutoCompletePlugin } from '@syncfusion/ej2-vue-dropdowns';
import { Query, Predicate, DataManager, ODataV4Adaptor } from
'@syncfusion/ej2-data';
Vue.use(AutoCompletePlugin);
var groupTemplate = Vue.component("groupTemplate", {
  template: `<strong>{{data.City}}</strong>`,
  data() {
    return {
      data: {}
    };
  }
});
var remoteData = new DataManager({
  url: 'https://services.odata.org/V4/Northwind/Northwind.svc',
  adaptor: new ODataV4Adaptor,
  crossDomain: true
});
export default {
  name: 'app',
  data () {
    return {
      fields: { value: 'FirstName', groupBy:'City' },
      waterMark: 'Find an employee',
      sortOrder: 'Ascending',
      data: remoteData,
      gTemplate: function(e) {
        return {
          template: groupTemplate
        };
      },
      query: new Query().from('Employees').select(['FirstName',
'City', 'EmployeeID']).take(6).where(new Predicate('City',
'equal','london').or('City','equal','seattle')),
    }
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-dropdowns/styles/material.css";
#app {
  color: #008cff;
  height: 40px;

```

```

    position: absolute;
    width: 90%;
    top: 10%;
  }
  .autocomplete {
    width: 30%;
    margin: 0 auto;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/auto-complete/getting-started-cs21" %}

### Header template

The header element is shown statically at the top of the suggestion list items within the AutoComplete, and any custom element can be placed as a header element using [headerTemplate](#) property.

In the following sample, the list items and its headers are designed and displayed as two columns similar to multiple columns of the grid.

### APP.VUE

```

<template>
  <div id="app">
    <div class='autocomplete'>
      <ejs-autocomplete id='employees' :query='query' :dataSource='data'
      :fields='fields' :placeholder='waterMark' :headerTemplate='hTemplate'
      :sortOrder='sortOrder' :itemTemplate='iTemplate' popupHeight="450px"></ejs-
      autocomplete>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
import { AutoCompletePlugin } from '@syncfusion/ej2-vue-dropdowns';
import { Query, DataManager, ODataV4Adaptor } from '@syncfusion/ej2-data';
Vue.use(AutoCompletePlugin);
var headerVue = Vue.component("headerTemplate", {
  template: `<span class='head'><span class='name'>Name</span><span
class='city'>City</span></span>`,
  data() {
    return {
      data: {}
    };
  }
});
var itemVue = Vue.component("itemTemplate", {
  template: `<span class='item'><span class='name'>
{{data.FirstName}}</span><span class='city'>{{data.City}}</span></span>`,
  data() {
    return {
      data: {}
    };
  }
});
var remoteData = new DataManager({
  url: 'https://services.odata.org/V4/Northwind/Northwind.svc',

```

```

    adaptor: new ODataV4Adaptor,
    crossDomain: true
  });
  export default {
    name: 'app',
    data () {
      return {
        fields: { value: 'FirstName' },
        waterMark: 'Find an employee',
        sortOrder: 'Ascending',
        data: remoteData,
        iTemplate: function(e) {
          return {
            template: itemVue
          };
        },
        hTemplate: function(e) {
          return {
            template: headerVue
          };
        },
        query: new Query().from('Employees').select(['FirstName',
'City', 'EmployeeID']).take(6),
      }
    }
  }
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
dropdowns/styles/material.css";
#app {
  color: #008cff;
  height: 40px;
  position: absolute;
  width: 90%;
  top: 10%;
}
.autocomplete {
  width: 30%;
  margin: 0 auto;
}
.city{
  right: 15px;
  position: absolute;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/auto-complete/getting-started-cs22" %}

### Footer template

The AutoComplete has options to show a footer element at the bottom of the list items in the suggestion list. Here, you can place any custom element as a footer element using [footerTemplate](#) property.

In the following sample, footer element displays the total number of list items present in the AutoComplete.

#### APP.VUE

```
<template>
  <div id="app">
    <div class='autocomplete'>
      <ejs-autocomplete ref='instance' :footerTemplate='fTemplate'
id='employees' :dataSource='data' :placeholder='waterMark'
:open='onopen'></ejs-autocomplete>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
import { AutoCompletePlugin } from '@syncfusion/ej2-vue-dropdowns';
Vue.use(AutoCompletePlugin);
var footVue = Vue.component("footerTemplate", {
  template: `<span class='foot'></span>`,
  data() {
    return {
      data: {}
    };
  }
});
export default {
  name: 'app',
  mounted() {
    document.getElementsByClassName('e-
autocomplete')[0].addEventListener('keyup', (e) => {
      this.onopen();
    })
  },
  data () {
    return {
      waterMark: 'Find a game',
      sortOrder: 'Ascending',
      data: ['Badminton', 'Basketball', 'Cricket',
        'Football', 'Golf', 'Gymnastics',
        'Hockey', 'Rugby', 'Snooker', 'Tennis'
      ],
      fTemplate: function(e) {
        return {
          template: footVue
        };
      },
    },
  },
  methods: {
    onopen: function() {
      var count = this.$refs.instance.getItems().length;
      var ele = document.getElementsByClassName('foot')[0];
      ele.innerHTML = "Total list item: " + count;
    }
  }
}
```

```

{% previewsample "page.domainurl/code-snippet/auto-complete/getting-started-cs23" %}

### No records template

The AutoComplete is provided with support to custom design the popup list content when no data is found and no matches found on search with the help of [noRecordsTemplate](#) property.

In the following sample, popup list content displays the notification of no data available.

### APP.VUE

```

<template>
  <div id="app">
    <div class='autocomplete'>
      <ejs-autocomplete ref='instance' id='employees' :dataSource='data'
      :placeholder='waterMark' :noRecordsTemplate='nTemplate'></ejs-autocomplete>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
import { AutoCompletePlugin } from '@syncfusion/ej2-vue-dropdowns';
Vue.use(AutoCompletePlugin);
var nVue = Vue.component("noRecordsTemplate", {
  template: `<span class="norecord"> NO DATA AVAILABLE</span>`,
  data() {
    return {
      data: {}
    };
  }
});

```

```

    }
  });
  export default {
    name: 'app',
    data () {
      return {
        waterMark: 'Find an item',
        data: [],
        nTemplate: function(e) {
          return {
            template: nVue
          };
        },
      }
    }
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
dropdowns/styles/material.css";
#app {
  color: #008cff;
  height: 40px;
  position: absolute;
  width: 90%;
  top: 10%;
}
.autocomplete {
  width: 30%;
  margin: 0 auto;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/auto-complete/getting-started-cs24" %}

### Action failure template

There is also an option to custom design the popup list content when the data fetch request fails at the remote server. This can be achieved using the `actionFailureTemplate` property.

In the following sample, when the data fetch request fails, the AutoComplete displays the notification.

### APP.VUE

```

<template>
  <div id="app">
    <div class='autocomplete'>
      <ejs-autocomplete ref='instance' :fields='fields' :query='query'
id='employees' :dataSource='data' :placeholder='waterMark'
:actionFailureTemplate='actionTemplate'></ejs-autocomplete>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';

```

```

import { AutoCompletePlugin } from '@syncfusion/ej2-vue-dropdowns';
import { Query, DataManager, ODataV4Adaptor } from '@syncfusion/ej2-data';
Vue.use(AutoCompletePlugin);
var actionVue = Vue.component("actionFailureTemplate", {
  template: `<span class="action-failure"> Data fetch got failed</span>`,
  data() {
    return {
      data: {}
    };
  }
});
var remoteData = new DataManager({
  url: 'https://services.odata.org/V4/Northwind/Northwind.svcs',
  adaptor: new ODataV4Adaptor,
  crossDomain: true
});
export default {
  name: 'app',
  data () {
    return {
      waterMark: 'Find an employee',
      data: remoteData,
      actionTemplate: function(e) {
        return {
          template: actionVue
        };
      },
      query: new
Query().from('Employees').select(['FirstName']).take(6),
      fields: { value: 'FirstName' }
    }
  }
}
</script>
<style>
@import "../../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../../node_modules/@syncfusion/ej2-vue-
dropdowns/styles/material.css";
#app {
  color: #008cff;
  height: 40px;
  position: absolute;
  width: 90%;
  top: 10%;
}
.autocomplete {
  width: 30%;
  margin: 0 auto;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/auto-complete/getting-started-cs25" %}

## Virtualization in AutoComplete Component

AutoComplete virtualization is a technique used to efficiently render extensive lists of items while minimizing the impact on performance. This method is particularly advantageous when dealing with large datasets because it ensures that only a fixed number of DOM (Document Object Model) elements are created. When scrolling through the list, existing DOM elements are reused to display relevant data instead of generating new elements for each item. This recycling process is managed internally.

During virtual scrolling, the data retrieved from the data source depends on the popup height and the calculation of the list item height. Enabling the [enableVirtualization](#) option in a AutoComplete activates this virtualization technique.

When fetching data from the data source, the [actionBegin](#) event is triggered before data retrieval begins. Then, the [actionComplete](#) event is triggered once the data is successfully fetched.

When the `enableVirtualization` property is enabled, the `skip` and `take` properties provided by the user within the Query class at the initial state or during the `actionBegin` or `actionComplete` events will not be considered, since it is internally managed and calculated based on certain dimensions with respect to the popup height.

## Binding local data

The AutoComplete can generate its list items through an array of complex data. For this, the appropriate columns should be mapped to the [fields](#) property. When using virtual scrolling, the list updates based on the scroll offset value, triggering a request to fetch more data from the server. As the data is being fetched, the `actionBegin` event occurs before the data retrieval starts. Once the data retrieval is successful, the `actionComplete` event is triggered, indicating that the data fetch process is complete.

In the following example, `text` column from complex data have been mapped to the `value` field.

**APP.VUE**

```
<template>
<div id="app">
  <div id="wrapper1">
    <ejs-autocomplete id='autocomplete' :dataSource='itemData'
placeholder='e.g Item 1' :fields='fields' :enableVirtualization='true'
popupHeight="200px"></ejs-autocomplete>
  </div>
</div>
</template>
<script>
import { AutoCompleteComponent, VirtualScroll } from "@syncfusion/ej2-vue-
dropdowns";
let records = [];
function dataSource() {
  for (let i = 1; i <= 150; i++) {
    let item = {
      id: 'id' + i,
```

```

        text: "Item " + i,
    };
    records.push(item);
}
}
dataSource();
//Component registration
export default {
    name: 'App',
    components: {
        "ejs-autocomplete": AutoCompleteComponent
    },
    data () {
        return {
            itemData: records,
            fields: { value: 'text' }
        }
    },
    provide: {
        autocomplete: [VirtualScroll]
    }
}
</script>
<style>
@import "../../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../../node_modules/@syncfusion/ej2-vue-
dropdowns/styles/material.css";
@import "../../node_modules/@syncfusion/ej2-
notifications/styles/material.css";
#wrapper1{
    min-width: 250px;
    float: left;
    margin-left: 350px;
}
#wrapper2{
    min-width: 250px;
    float: right;
    margin-right: 100px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/auto-complete/virtual-scroll" %}

### Binding remote data

The AutoComplete supports retrieval of data from remote data services with the help of **DataManager** component. When using remote data, it initially fetches all the data from the server, triggering the **actionBegin** and **actionComplete** events, and then stores the data locally. During virtual scrolling, additional data is retrieved from the locally stored data, triggering the **actionBegin** and **actionComplete** events at that time as well.

The following sample displays the OrderId from the **Orders** Data Service.

### APP.VUE

```

<template>
<div id="app">
  <div id="wrapper1">
    <ejs-autocomplete id='autocomplete' :dataSource='itemData'
placeholder='e.g Item 1' :fields='fields' :enableVirtualization='true'
popupHeight="200px"></ejs-autocomplete>
  </div>
</div>
</template>
<script>
import { AutoCompleteComponent, VirtualScroll } from "@syncfusion/ej2-vue-
dropdowns";
import { Query, DataManager, WebApiAdaptor } from '@syncfusion/ej2-data';
var remoteData = new DataManager({
  url: 'https://services.syncfusion.com/js/production/api/orders',
  adaptor: new WebApiAdaptor,
  crossDomain: true
});
//Component registration
export default {
  name: 'App',
  components: {
    "ejs-autocomplete": AutoCompleteComponent
  },
  data () {
    return {
      itemData: remoteData,
      fields: { text: 'OrderID', value: 'OrderID' },
    },
    provide: {
      autocomplete: [VirtualScroll]
    }
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
dropdowns/styles/material.css";
@import "../node_modules/@syncfusion/ej2-
notifications/styles/material.css";
#wrapper1{
  min-width: 250px;
  float: left;
  margin-left: 350px;
}
#wrapper2{
  min-width: 250px;
  float: right;
  margin-right: 100px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/auto-complete/virtual-scroll-remote" %}

## Grouping

The AutoComplete component supports grouping with Virtualization. It allows you to organize elements into groups based on different categories. Each item in the list can be classified using the [groupBy](#) field in the data table. After grouping, virtualization works similarly to local data binding, providing a seamless user experience. When the data source is bound to remote data, an initial request is made to retrieve all data for the purpose of grouping. Subsequently, the grouped data works in the same way as local data binding virtualization, enhancing performance and responsiveness.

The following sample shows the example for Grouping with Virtualization.

### APP.VUE

```
<template>
<div id="app">
  <div id="wrapper1">
    <ejs-autocomplete id='autocomplete' :dataSource='itemData'
placeholder='e.g Item 1' :fields='fields' :enableVirtualization='true'
popupHeight="200px"></ejs-autocomplete>
  </div>
</div>
</template>
<script>
import { AutoCompleteComponent, VirtualScroll } from "@syncfusion/ej2-vue-
dropdowns";
let records = [];
function dataSource() {
  for (var i = 1; i <= 150; i++) {
    var item = {};
    item.id = 'id' + i;
    item.text = "Item ".concat(i);
    var randomGroup = Math.floor(Math.random() * 4) + 1;
    switch (randomGroup) {
      case 1:
        item.group = 'Group A';
        break;
      case 2:
        item.group = 'Group B';
        break;
      case 3:
        item.group = 'Group C';
        break;
      case 4:
        item.group = 'Group D';
        break;
      default:
        break;
    }
    records.push(item);
  }
}
dataSource();
//Component registration
export default {
  name: 'App',
  components: {
    "ejs-autocomplete": AutoCompleteComponent
```

```

    },
    data () {
      return {
        itemData: records,
        fields: { groupBy: 'group', value: 'text' }
      }
    },
    provide: {
      autocomplete: [VirtualScroll]
    }
  }
</script>
<style>

  margin-right: 100px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/auto-complete/virtual-scroll-group" %}

### Grouping in Vue Auto complete component

The AutoComplete supports wrapping nested elements into a group based on different categories. The category of each list item can be mapped through the [Link to the Video](#) field in the data table. The group header is displayed as both inline and fixed headers. The fixed group header content is updated dynamically on scrolling the suggestion list with its category value.

To group the Vue AutoComplete items, you can check on this video:

In the following sample, vegetables are grouped according on its category using groupBy field.

#### APP.VUE

```

<template>
  <div id="app">
    <ejs-autocomplete :dataSource='vegetableData' :fields='fields'
:placeholder="waterMark" ></ejs-autocomplete>
  </div>
</template>
<script>
import Vue from 'vue';
import { AutoCompletePlugin } from '@syncfusion/ej2-vue-dropdowns';
Vue.use(AutoCompletePlugin);
export default {

```

```

name: 'app',
data () {
  return {
    waterMark : 'Find a vegetable',
    vegetableData: [
      { Vegetable: 'Cabbage', Category: 'Leafy and Salad', Id: 'item1' },
      { Vegetable: 'Spinach', Category: 'Leafy and Salad', Id: 'item2' },
      { Vegetable: 'Wheat grass', Category: 'Leafy and Salad', Id: 'item3' },
      { Vegetable: 'Yarrow', Category: 'Leafy and Salad', Id: 'item4' },
      { Vegetable: 'Pumpkins', Category: 'Leafy and Salad', Id: 'item5' },
      { Vegetable: 'Chickpea', Category: 'Beans', Id: 'item6' },
      { Vegetable: 'Green bean', Category: 'Beans', Id: 'item7' },
      { Vegetable: 'Horse gram', Category: 'Beans', Id: 'item8' },
      { Vegetable: 'Garlic', Category: 'Bulb and Stem', Id: 'item9' },
      { Vegetable: 'Nopal', Category: 'Bulb and Stem', Id: 'item10' },
      { Vegetable: 'Onion', Category: 'Bulb and Stem', Id: 'item11' }
    ],
    fields: { groupBy: 'Category', value: 'Vegetable' }
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
dropdowns/styles/material.css";
#app {
  color: #008cff;
  height: 40px;
  left: 35%;
  position: absolute;
  top: 10%;
  width: 30%;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/auto-complete/getting-started-cs14" %}

### Filtering in Vue Auto complete component

The AutoComplete has built-in support to filter data items. The filter operation starts as soon as you start typing characters in the component.

To filter the Vue AutoComplete items, you can check on this video:

#### Change the filter type

Determines on which filter type, the component needs to be considered on search action. The available [filterType](#) and its supported data types are

Filter Type	Description	Supported Types
-------------	-------------	-----------------

|-----|-----|-----|

| **StartsWith** | Checks whether a value begins with the specified value. | String |

| **EndsWith** | Checks whether a value ends with specified value. | String |

| **Contains** | Checks whether a value contains with specified value. | String |

The following examples shows the data filtering is done with **StartsWith** type.

### APP.VUE

```
<template>
  <div id="app">
    <div class='autocomplete'>
      <ejs-autocomplete :dataSource='data' :fields='fields'
sortOrder='sortOrder' :filterType='filterType' :query='query'
:placeholder="waterMark" ></ejs-autocomplete>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
import { AutoCompletePlugin } from '@syncfusion/ej2-vue-dropdowns';
import { Query, DataManager, ODataV4Adaptor } from '@syncfusion/ej2-data';
Vue.use(AutoCompletePlugin);
var remoteData = new DataManager({
  url: 'https://services.odata.org/V4/Northwind/Northwind.svc/Customers',
  adaptor: new ODataV4Adaptor,
  crossDomain: true
});
export default {
  name: 'app',
  data () {
    return {
      waterMark : 'Find a customer',
      data: remoteData,
      fields: { value: 'ContactName' },
      query: new Query().select(['ContactName']),
      sortOrder: 'Ascending',
      filterType: 'StartsWith'
    }
  }
}
</script>
<style>
@import "../../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../../node_modules/@syncfusion/ej2-vue-
dropdowns/styles/material.css";
#app {
  color: #008c8f;
  height: 40px;
  position: absolute;
  top: 10%;
  width: 90%;
}
.autocomplete {
```

```
width: 30%;
margin: 0 auto;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/auto-complete/getting-started-cs6" %}

### Filter item count

You can specify the filter suggestion item count through [suggestionCount](#) property of AutoComplete.

The following example, to restrict the suggestion list item counts as 5.

### APP.VUE

```
<template>
  <div id="app">
    <div class='autocomplete'>
      <ejs-autocomplete :dataSource='data' :fields='fields'
sortOrder='sortOrder'
      :query='query' :suggestionCount='suggestionCount'
:placeholder="waterMark"></ejs-autocomplete>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
import { AutoCompletePlugin } from '@syncfusion/ej2-vue-dropdowns';
import { Query, DataManager, ODataV4Adaptor } from '@syncfusion/ej2-data';
Vue.use(AutoCompletePlugin);
var remoteData = new DataManager({
  url: 'https://services.odata.org/V4/Northwind/Northwind.svc/Customers',
  adaptor: new ODataV4Adaptor,
  crossDomain: true
});
export default {
  name: 'app',
  data () {
    return {
      waterMark : 'Find a customer',
      data: remoteData,
      fields: { value: 'ContactName' },
      query: new Query().select(['ContactName', 'CustomerID']),
      sortOrder: 'Ascending',
      suggestionCount: 5
    }
  }
}
</script>
<style>
@import "../../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../../node_modules/@syncfusion/ej2-vue-
dropdowns/styles/material.css";
#app {
  color: #008cff;
  height: 40px;
  position: absolute;
```

```

    top: 10%;
    width: 90%;
  }
  .autocomplete {
    width: 30%;
    margin: 0 auto;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/auto-complete/getting-started-cs7" %}

### Limit the minimum filter character

You can set the limit for the character count to filter the data on the AutoComplete. This can be done by set the [minLength](#) property to AutoComplete.

In the following example, the remote request doesn't fetch the search data, until the search key contains three characters.

### APP.VUE

```

<template>
  <div id="app">
    <div class='autocomplete'>
      <ejs-autocomplete :dataSource='data' :fields='fields'
sortOrder='sortOrder'
      :query='query' :filterType='filterType' :minLength='minLength'
      :placeholder="waterMark"></ejs-autocomplete>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
import { AutoCompletePlugin } from '@syncfusion/ej2-vue-dropdowns';
import { Query, DataManager, ODataV4Adaptor } from '@syncfusion/ej2-data';
Vue.use(AutoCompletePlugin);
var remoteData = new DataManager({
  url: 'https://services.odata.org/V4/Northwind/Northwind.svc/Customers',
  adaptor: new ODataV4Adaptor,
  crossDomain: true
});
export default {
  name: 'app',
  data () {
    return {
      waterMark : 'Find a customer',
      data: remoteData,
      fields: { value: 'ContactName' },
      query: new Query().select(['ContactName', 'CustomerID']),
      sortOrder: 'Ascending',
      filterType: 'StartsWith',
      minLength: 3
    }
  }
}
</script>
<style>

```

```

@import "../../../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../../../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../../../node_modules/@syncfusion/ej2-vue-
dropdowns/styles/material.css";
#app {
  color: #008cff;
  height: 40px;
  position: absolute;
  top: 10%;
  width: 90%;
}
.autocomplete {
  width: 30%;
  margin: 0 auto;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/auto-complete/getting-started-cs8" %}

### Case sensitive filtering

Data items can be filtered either with or without case sensitivity using the **DataManager**. This can be done by setting the [ignoreCase](#) property of AutoComplete.

The following sample depicts how to filter the data with case-sensitive.

### APP.VUE

```

<template>
  <div id="app">
    <div class='autocomplete'>
      <ejs-autocomplete :dataSource='data' :fields='fields'
      sortOrder='sortOrder' :query='query' :filterType='filterType'
      :ignoreCase='ignoreCase' :placeholder="waterMark" ></ejs-autocomplete>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
import { AutoCompletePlugin } from '@syncfusion/ej2-vue-dropdowns';
import { Query, DataManager, ODataV4Adaptor } from '@syncfusion/ej2-data';
Vue.use(AutoCompletePlugin);
var remoteData = new DataManager({
  url: 'https://services.odata.org/V4/Northwind/Northwind.svc/Customers',
  adaptor: new ODataV4Adaptor,
  crossDomain: true
});
export default {
  name: 'app',
  data () {
    return {
      waterMark : 'Find a customer',
      data: remoteData,
      fields: { value: 'ContactName' },
      query: new Query().select(['ContactName']),
      sortOrder: 'Ascending',
      filterType: 'StartsWith',

```

```

        ignoreCase: false
      }
    }
  }
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
dropdowns/styles/material.css";
#app {
  color: #008cff;
  height: 40px;
  position: absolute;
  top: 10%;
  width: 90%;
}
.autocomplete {
  width: 30%;
  margin: 0 auto;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/auto-complete/getting-started-cs9" %}

### Diacritics Filtering

An AutoComplete supports diacritics filtering which will ignore the diacritics and makes it easier to filter the results in international characters lists when the [ignoreAccent](#) is enabled.

In the following sample, data with diacritics are bound as dataSource for AutoComplete.

### APP.VUE

```

<template>
  <div id="app">
    <div class='autocomplete'>
      <ejs-autocomplete :dataSource='data' :ignoreAccent='ignoreAccent'
        :placeholder="waterMark" ></ejs-autocomplete>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
import { AutoCompletePlugin } from '@syncfusion/ej2-vue-dropdowns';
Vue.use(AutoCompletePlugin);
export default {
  name: 'app',
  data () {
    return {
      data: [
        'Aeróbics',
        'Aeróbics en Agua',
        'Aerografía',
        'Aeromodelaje',
        'Águilas',
        'Ajedrez',

```

```

        'Ala Delta',
        'Álbumes de Música',
        'Alusivos',

## Localization in Vue Auto complete component

The Localization library allows you to localize static text content of the noRecordsTemplate and actionFailureTemplate properties according to the culture currently assigned to the AutoComplete.

| Locale key | en-US (default) |

|-----|-----|

| noRecordsTemplate | No Records Found |

| actionFailureTemplate | The Request Failed |

### Loading translations

To load translation object to your application, use load function of the L10n class. In the following sample, French culture is set to the AutoComplete and no data is loaded.

Hence, the noRecordsTemplate property displays its text in French culture initially and if the sample is run offline, the actionFailureTemplate property displays its text appropriately.

**APP.VUE**

```

<template>
  <div id="app">
    <ejs-autocomplete :dataSource='data' :locale='locale' :fields='fields'
    sortOrder='sortOrder' :query='query' :placeholder="waterMark" ></ejs-
    autocomplete>
  </div>
</template>
<script>
import Vue from 'vue';
import { AutoCompletePlugin } from '@syncfusion/ej2-vue-dropdowns';
import { loadCldr, L10n } from '@syncfusion/ej2-base';
import { Query, DataManager, ODataV4Adaptor } from '@syncfusion/ej2-data';
Vue.use(AutoCompletePlugin);
var remoteData = new DataManager({
  url: 'https://services.odata.org/V4/Northwind/Northwind.svc/Customers',
  adaptor: new ODataV4Adaptor,
  crossDomain: true
});
L10n.load({
  'fr-BE': {
    'dropdowns': {
      noRecordsTemplate: "Aucun enregistrement trouvé",
      actionFailureTemplate: "Modèle d'échec d'action"
    }
  },
});
export default {
  name: 'app',
  data () {
    return {
      waterMark : 'Trouver un client',
      query: new Query().select(['ContactName', 'CustomerID']),
      data: remoteData,
      locale: 'fr-BE',
      fields: { value: 'ContactName' },
      sortOrder: 'Ascending'
    }
  }
}
</script>
<style>
@import ".../node_modules/@syncfusion/ej2-base/styles/material.css";
@import ".../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import ".../node_modules/@syncfusion/ej2-vue-
dropdowns/styles/material.css";
#app {
  color: #008cff;
  height: 40px;
  left: 35%;
  position: absolute;
  top: 15%;
  width: 30%;
}
</style>

```

```

### Style in Vue Auto complete component

The following content provides the exact CSS structure that can be used to modify the control's appearance based on the user preference.

#### Customizing the appearance of wrapper element

Use the following CSS to customize the appearance of wrapper element.

```
,
.e-ddl.e-input-group.e-control-wrapper .e-input {
font-size: 20px;
font-family: emoji;
color: #ab3243;
background: #32a5ab;
}
,
```

#### Customizing the dropdown icon's color

Use the following CSS to customize the dropdown icon's color.

```
,
.e-ddl.e-input-group .e-input-group-icon,.e-ddl.e-input-group.e-control-wrapper .e-input-group-
icon:hover {
color: #bb233d;
font-size: 13px;
}
,
```

#### Customizing the focus color

Use the following CSS to customize the focusing color of input element.

```
,
.e-ddl.e-input-group.e-control-wrapper.e-input-focus::before, .e-ddl.e-input-group.e-control-wrapper.e-
input-focus::after {
background: #c000ff;
}
,
```

### Customizing the outline theme's focus color

Use the following CSS to customize the focusing color of outline theme.

```
,
.e-outline.e-input-group.e-input-focus:hover:not(.e-success):not(.e-warning):not(.e-error):not(.e-disabled):not(.e-float-icon-left),.e-outline.e-input-group.e-input-focus.e-control-wrapper:hover:not(.e-success):not(.e-warning):not(.e-error):not(.e-disabled):not(.e-float-icon-left),.e-outline.e-input-group.e-input-focus:not(.e-success):not(.e-warning):not(.e-error):not(.e-disabled),.e-outline.e-input-group.e-control-wrapper.e-input-focus:not(.e-success):not(.e-warning):not(.e-error):not(.e-disabled) {
border-color: #b1bd15;
box-shadow: inset 1px 1px #b1bd15, inset -1px 0 #b1bd15, inset 0 -1px #b1bd15;
}
,
```

### Customizing the disabled component's text color

Use the following CSS to customize the text color when the component is disabled.

```
,
.e-input-group.e-control-wrapper .e-input[disabled] {
-webkit-text-fill-color: #0d9133;
}
,
```

### Customizing the float label element's focusing color

Use the following CSS to customize the focusing color of float label element.

```
,
.e-float-input.e-input-group:not(.e-float-icon-left) .e-float-line::before,.e-float-input.e-control-wrapper.e-input-group:not(.e-float-icon-left) .e-float-line::before,.e-float-input.e-input-group:not(.e-float-icon-left) .e-float-line::after,.e-float-input.e-control-wrapper.e-input-group:not(.e-float-icon-left) .e-float-line::after {
background-color: #2319b8;
}
.e-ddl.e-input-group.e-control-wrapper.e-float-input.e-input-focus .e-float-text.e-label-top, .e-float-input.e-control-wrapper:not(.e-error).e-input-focus input ~ label.e-float-text {
color: #2319b8;
}
,
```

### Customizing the color of the placeholder text

Use the following CSS to customize the text color of placeholder.

```
,
.e-ddl.e-input-group input.e-input::placeholder {
```

```
color: red;
}
```

### Customizing the text selection color

Use the following CSS to customize the selection color of text and background.

```
.e-ddl.e-input-group input.e-input::selection {
color: red;
background: yellow;
}
```

### Customizing the background color of focus, hover, and active item's

Use the following CSS to customize the background color of focus, hover and active item's.

```
.e-dropdownbase .e-list-item.e-item-focus, .e-dropdownbase .e-list-item.e-active, .e-dropdownbase .e-list-item.e-active.e-hover, .e-dropdownbase .e-list-item.e-hover {
background-color: #1f9c99;
color: #2319b8;
}
```

### Customizing the appearance of pop-up element

Use the following CSS to customize the appearance of popup element.

```
.e-dropdownbase .e-list-item, .e-dropdownbase .e-list-item.e-item-focus {
background-color: #29c2b8;
color: #207cd9;
font-family: emoji;
min-height: 29px;
}
```

### Adding mandatory asterisk to placeholder and float label

You can add a mandatory asterisk(\*) to placeholder and float label using `<b>.e-input-group.e-control-wrapper.e-float-input .e-float-text::after</b>` class.

### APP.VUE

```
<template>
```

```

    <div id="app">
      <ejs-autocomplete :dataSource='sportsData' :placeholder="waterMark"
      :floatLabelType= "auto"></ejs-autocomplete>
    </div>
  </template>
  <script>
import Vue from 'vue';
import { AutoCompletePlugin } from '@syncfusion/ej2-vue-dropdowns';
Vue.use(AutoCompletePlugin);
export default {
  name: 'app',
  data () {
    return {
      waterMark : 'e.g. Basketball',
      sportsData: ['American Football', 'Badminton', 'Basketball',
'Cricket',
                    'Football', 'Golf', 'Gymnastics',
                    'Hockey', 'Rugby', 'Snooker', 'Tennis'
                ]
    }
  }
}
  </script>
  <style>
@import "../../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../../node_modules/@syncfusion/ej2-vue-
dropdowns/styles/material.css";
#app {
  color: #008cff;
  height: 40px;
  left: 35%;
  position: absolute;
  top: 35%;
  width: 30%;
}
.e-input-group.e-control-wrapper.e-float-input .e-float-text::after {
  content: '*';
  color: red;
}
  </style>

```

{% previewsample "page.domainurl/code-snippet/auto-complete/getting-started-cs19" %}

### Accessibility in Vue Auto complete component

The AutoComplete component followed the accessibility guidelines and standards, including [ADA](#), [Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the AutoComplete component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2 Support](#) |  |

| [Section 508 Support](#) |  |

| [Screen Reader Support](#) |  |

| [Right-To-Left Support](#) |  |

| [Color Contrast](#) |  |

| [Mobile Device Support](#) |  |

| [Keyboard Navigation Support](#) |  |

| [Accessibility Checker Validation](#) |  |

| [Axe-core Accessibility Validation](#) |  |

<style>

```
.post .post-content img {
display: inline-block;
margin: 0.5em 0;
}
```

</style>

<div> - All features of the component meet the requirement.</div>

<div> - Some features of the component do not meet the requirement.</div>

<div> - The component does not meet the requirement.</div>

### WAI-ARIA attributes

The AutoComplete component has been designed, keeping in mind the WAI-ARIA specifications, and applies the WAI-ARIA roles, states, and properties along with keyboard support. This component is characterized by complete keyboard interaction support and ARIA accessibility support that makes it easy for people who use assistive technologies (AT) or those who completely rely on keyboard navigation.

### ARIA attributes

The AutoComplete component uses the **combobox** role and each list item has an **option** role. The following ARIA Attributes denote the AutoComplete state.

| **Property** | **Functionalities** |

| --- | --- |

| aria-haspopup | Indicates whether the AutoComplete input element has a suggestion list or not. |

| aria-expanded | Indicates whether the suggestion list has expanded or not. |

| aria-selected | Indicates the selected option from the list. |

| aria-readonly | Indicates the readonly state of the AutoComplete element. |

| aria-disabled | Indicates whether the AutoComplete component is in a disabled state or not. |

| aria-activedescendent | This attribute holds the ID of the active list item to focus its descendant child element. |

| aria-owns | This attribute contains the ID of the suggestion list to indicate popup as a child element. |

| aria-autocomplete | This attribute contains the 'both' to a list of options shows and the currently selected suggestion also shows inline. |

### Keyboard interaction

You can use the following key shortcuts to access the AutoComplete without interruptions.

| **Keyboard shortcuts** | **Actions** |

| --- | --- |

| Arrow Down | In popup hidden state, opens the suggestion list. In popup open state, selects the first item when no item selected else selects the item next to the currently selected item. |

| Arrow Up | In popup hidden state, opens the suggestion list. In popup open state, selects the last item when no item selected else selects the item previous to the currently selected one. |

| Page Down | Scrolls down to the next page and selects the first item when popup list opens. |

| Page Up | Scrolls up to previous page and select the first item when popup list open. |

| Enter | Selects the focused item and set to AutoComplete component. |

| Tab | Focuses on the next tab indexed element when the popup is closed. Otherwise, closes the popup list and remains the focus in component suppose if it is in an open state. |

| Shift + tab | Focuses the previous tab indexed element when the popup is closed. Otherwise, closes the popup list and remains the focus in component suppose if it is in an open state. |

| Alt + Down | Opens the popup list. |

| Alt + Up | In popup hidden state, opens the popup list. In popup open state, closes the popup list. |

| Esc(Escape) | Closes the popup list when it is in an open state then remove the selection. |

| Home | Cursor moves to before of first character in input. |

| End | Cursor moves to next of last character in input. |

In the below sample, focus the AutoComplete component using alt+t keys.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-autocomplete ref='instance' :dataSource='sportsData'
:fields='fields' :placeholder="waterMark" ></ejs-autocomplete>
  </div>
</template>
<script>
import Vue from 'vue';
import { AutoCompletePlugin } from '@syncfusion/ej2-vue-dropdowns';
Vue.use(AutoCompletePlugin);
export default {
  name: 'app',
  data () {
    return {
      waterMark : 'Find a game',
      sportsData: [
        { Id: 'Game1', Game: 'Badminton' },
        { Id: 'Game2', Game: 'Basketball' },
        { Id: 'Game3', Game: 'Cricket' },
        { Id: 'Game4', Game: 'Football' },
        { Id: 'Game5', Game: 'Golf' },
        { Id: 'Game6', Game: 'Hockey' },
        { Id: 'Game7', Game: 'Rugby' },
        { Id: 'Game8', Game: 'Snooker' }
      ],
      fields: { value: 'Game' }
    }
  },
  methods: {
    keylistener: function(evt) {
      if (event.altKey && event.keyCode === 84 /* t */) {
        // press alt+t to focus the control.
        this.$refs.instance.focusIn();
      }
    },
    created: function() {
      document.addEventListener('keyup', this.keylistener);
    },
  }
}
</script>
<style>
@import "../../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../../node_modules/@syncfusion/ej2-vue-
dropdowns/styles/material.css";
#app {
  color: #008cff;
  height: 40px;
  left: 35%;
  position: absolute;
  top: 35%;
  width: 30%;
}
</style>

```

```
{% previewsample "page.domainurl/code-snippet/auto-complete/getting-started-cs1" %}
```

### Ensuring accessibility

The AutoComplete component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the AutoComplete component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the AutoComplete component with accessibility tools.

```
{% previewsample "https://ej2.syncfusion.com/accessibility/auto-complete.html" %}
```

- [Accessibility in Syncfusion Vue components](#)

### Two way binding in Vue Auto complete component

Two-way binding can be achieved by using the `v-model` directive in Vue. In the following sample, when you change the value in one AutoComplete component, v-model will automatically update the value in the other AutoComplete.

The following example demonstrates how to set the `two-way-binding` in the AutoComplete.

#### APP.VUE

```
<template>
<div id="app">
  <div id="wrapper1">
    <ejs-autocomplete id='first':dataSource='sportsData'
:fields='fields' :placeholder="waterMark" v-model="value" ></ejs-
autocomplete>
  </div>
  <div id="wrapper2">
    <ejs-autocomplete id='second' :dataSource='sportsData'
:fields='fields' :placeholder="waterMark" v-model="value" ></ejs-
autocomplete>
  </div>
</div>
</template>
<script>
import Vue from 'vue';
import { AutoCompletePlugin } from '@syncfusion/ej2-vue-dropdowns';
Vue.use(AutoCompletePlugin);
export default {
  name: 'app',
  data () {
    return {
      waterMark : 'Select a game',
      value: null,
      sportsData: [
        { Id: 'Game1', Game: 'Badminton' },
        { Id: 'Game2', Game: 'Basketball' },
        { Id: 'Game3', Game: 'Cricket' },
        { Id: 'Game4', Game: 'Football' },
        { Id: 'Game5', Game: 'Golf' },
        { Id: 'Game6', Game: 'Hockey' },
      ],
    }
  }
}
```

```

    { Id: 'Game7', Game: 'Rugby' },
    { Id: 'Game8', Game: 'Snooker' }
  ],
  fields: { value: 'Game' }
}
}
</script>
<style>
@import "../../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../../node_modules/@syncfusion/ej2-vue-
dropdowns/styles/material.css";
#wrapper1{
  min-width: 250px;
  float: left;
  margin-left: 100px;
}
#wrapper2{
  min-width: 250px;
  float: right;
  margin-right: 100px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/auto-complete/two-way-cs1" %}

## How To

### Autofill in Vue Auto complete component

The AutoComplete supports the autofill behavior with the help of [autofill](#) property. Whenever you change the input value, the AutoComplete will autocomplete your data by matching the typed character. Suppose, if no matches found then, AutoComplete doesn't suggest any item.

In the below sample, showcase that how to work autofill with AutoComplete.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-autocomplete :autofill='autofill' :dataSource='searchData'
    :fields='fields' :placeholder="waterMark" ></ejs-autocomplete>
  </div>
</template>
<script>
import Vue from 'vue';
import { AutoCompletePlugin } from '@syncfusion/ej2-vue-dropdowns';
Vue.use(AutoCompletePlugin);
export default {
  name: 'app',
  data () {
    return {
      waterMark : 'Find a country',
      searchData: [
        { Name: 'Australia', Code: 'AU' },
        { Name: 'Bermuda', Code: 'BM' },
        { Name: 'Canada', Code: 'CA' },

```

```

    { Name: 'Cameroon', Code: 'CM' },
    { Name: 'Denmark', Code: 'DK' },
    { Name: 'France', Code: 'FR' },
    { Name: 'Finland', Code: 'FI' },
    { Name: 'Germany', Code: 'DE' },
    { Name: 'Greenland', Code: 'GL' },
    { Name: 'Hong Kong', Code: 'HK' },
    { Name: 'India', Code: 'IN' },
    { Name: 'Italy', Code: 'IT' },
    { Name: 'Japan', Code: 'JP' },
    { Name: 'Mexico', Code: 'MX' },
    { Name: 'Norway', Code: 'NO' },
    { Name: 'Poland', Code: 'PL' },
    { Name: 'Switzerland', Code: 'CH' },
    { Name: 'United Kingdom', Code: 'GB' },
    { Name: 'United States', Code: 'US' }
  ],
  fields: { value: 'Name' },
  autofill: true
}
}
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
dropdowns/styles/material.css";
#app {
  color: #008c9f;
  height: 40px;
  left: 35%;
  position: absolute;
  top: 15%;
  width: 30%;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/auto-complete/getting-started-cs15" %}

### Icon support in Vue Auto complete component

You can render icons to the list items by mapping the [iconCss](#) field. This iconCss field create a span in the list item with mapped class name to allow styling as per your need.

In the following sample, the icon classes are mapped with iconCss field.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-autocomplete :dataSource='sortFormatData' :fields='fields'
:placeholder="waterMark" ></ejs-autocomplete>
  </div>
</template>
<script>
import Vue from 'vue';

```

```

import { AutoCompletePlugin } from '@syncfusion/ej2-vue-dropdowns';
Vue.use(AutoCompletePlugin);
export default {
  name: 'app',
  data () {
    return {
      waterMark : 'Find a format',
      sortFormatData: [
        { Class: 'sort', Type: 'Sort A to Z', Id: '1' },
        { Class: 'filter', Type: 'Filter', Id: '2' },
        { Class: 'clear', Type: 'Clear', Id: '3' }
      ],
      fields: { value: 'Type', iconCss: 'Class' }
    }
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-dropdowns/styles/material.css";
#app {
  color: #008cff;
  height: 40px;
  left: 35%;
  position: absolute;
  top: 35%;
  width: 30%;
}
#container {
  visibility: hidden;
}
#loader {
  color: #008cff;
  height: 40px;
  width: 30%;
  position: absolute;
  top: 45%;
  left: 45%;
}
.e-list-icon{
  line-height: 1.3;
  padding-right: 10px;
  text-indent: 5px;
}
.sort:before {
  content: '\e890';
  font-family: 'e-icons';
  font-size: 15px;
}
.filter:before {
  content: '\e7ee';
  font-family: 'e-icons';
  font-size: 15px;
  opacity: 0.78;
}
.clear:before {

```

```

        content: '\e7fc';
        font-family: 'e-icons';
        font-size: 15px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/auto-complete/getting-started-cs17" %}

### Custom search in Vue Auto complete component

The AutoComplete has built-in support to [highlight](#) the searched characters on suggested list items when enabled the highlight property.

In the below sample, customized the matched character in suggestion list by `e-highlight` class.

#### APP.VUE

```

<template>
  <div id="app">
    <ejs-autocomplete :highlight='highlight' :dataSource='searchData'
    :fields='fields' :placeholder="waterMark" ></ejs-autocomplete>
  </div>
</template>
<script>
import Vue from 'vue';
import { AutoCompletePlugin } from '@syncfusion/ej2-vue-dropdowns';
Vue.use(AutoCompletePlugin);
export default {
  name: 'app',
  data () {
    return {
      waterMark : 'Find a country',
      searchData: [
        { Name: 'Australia', Code: 'AU' },
        { Name: 'Bermuda', Code: 'BM' },
        { Name: 'Canada', Code: 'CA' },
        { Name: 'Cameroon', Code: 'CM' },
        { Name: 'Denmark', Code: 'DK' },
        { Name: 'France', Code: 'FR' },
        { Name: 'Finland', Code: 'FI' },
        { Name: 'Germany', Code: 'DE' },
        { Name: 'Greenland', Code: 'GL' },
        { Name: 'Hong Kong', Code: 'HK' },
        { Name: 'India', Code: 'IN' },
        { Name: 'Italy', Code: 'IT' },
        { Name: 'Japan', Code: 'JP' },
        { Name: 'Mexico', Code: 'MX' },
        { Name: 'Norway', Code: 'NO' },
        { Name: 'Poland', Code: 'PL' },
        { Name: 'Switzerland', Code: 'CH' },
        { Name: 'United Kingdom', Code: 'GB' },
        { Name: 'United States', Code: 'US' }
      ],
      fields: { value: 'Name' },
      highlight: true
    }
  }
}

```

```
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
dropdowns/styles/material.css";
#app {
  color: #008cff;
  height: 40px;
  left: 35%;

## Avatar

### Getting Started with the Vue Avatar Component in Vue 2

This article provides a step-by-step guide for setting up a Vue 2 project using [Vue-CLI](#) and integrating the Syncfusion Vue Avatar component using the [Composition API](#) / [Options API](#)[Link to the Video](#).

To get start quickly with Vue Avatar component, you can check on this video:

Prerequisites

[System requirements for Syncfusion Vue UI components](#)

### Setting up the Vue 2 project

To generate a Vue 2 project using Vue-CLI, use the [vue create](#) command. Follow these steps to install Vue CLI and create a new project:

```
`bash
```

```
npm install -g @vue/cli
```

```
vue create quickstart
```

```
cd quickstart
```

```
npm run serve
```

```
,
```

or

```
`bash
```

```
yarn global add @vue/cli
```

```
vue create quickstart
```

```
cd quickstart
```

```
yarn run serve
```

```
,
```

When creating a new project, choose the option `Default ([Vue 2] babel, eslint)` from the menu.

```
E:\samples>vue create quickstart

Vue CLI v5.0.8
? Please pick a preset:
  Default ([Vue 3] babel, eslint)
> Default ([Vue 2] babel, eslint)
  Manually select features
```

Once the `quickstart` project is set up with default settings, proceed to add Syncfusion components to the project.

#### Add Syncfusion Vue packages

Syncfusion packages are available at [npmjs.com](https://www.npmjs.com). To use Vue components, install the required npm package.

This article uses the [Vue Avatar component](#) as an example. Install the `@syncfusion/ej2-layouts` package by running the following command:

```
`bash
```

```
npm install @syncfusion/ej2-layouts --save
```

```
,
```

```
or
```

```
`bash
```

```
yarn add @syncfusion/ej2-layouts
```

```
,
```

#### Import Syncfusion CSS styles

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, [CRG](#) and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to themes in a Vue project.

In this article, the `Material` theme is applied using CSS styles, which are available in installed packages. The necessary `Material` CSS styles for the Avatar component and its dependents were imported into the `<style>` section of `src/App.vue` file.

#### ~/SRC/APP.VUE

```
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-layouts/styles/material.css";
</style>
```

We can also use [CRG](#) to generate combined component styles.

### Using Avatar in Vue Application

Add an HTML span element with `e-avatar` class into the `<template>` section of the `App.vue` file in `src` directory.

#### ~/SRC/APP.VUE

```
<template>
<div id="app">
<span class="e-avatar">GR</span>
</div>
</template>
```

Here is the summarized code for the above steps in the `src/App.vue` file:

#### ~/SRC/APP.VUE

```
<template>
  <div id='element'>
    <span class="e-avatar e-avatar-xlarge"></span>
    <span class="e-avatar e-avatar-large"></span>
    <span class="e-avatar"></span>
    <span class="e-avatar e-avatar-small"></span>
    <span class="e-avatar e-avatar-xsmall"></span>
  </div>
</template>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-layouts/styles/material.css";
  #element {
    display: block;
    width: 300px;
    margin: 130px auto;
    border-radius: 3px;
    justify-content: center;
  }
  .e-avatar {
    background-image: url(../pic01.png);
    margin: 2px;
  }
</style>
```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run serve
```

```
,
```

or

```
`bash
```

```
yarn run serve
```

```
,
```

```
{% previewsample "page.domainurl/code-snippet/avatar/getting-started-cs1" %}
```

[Types of Avatar](#)

## Getting Started with the Vue Avatar Component in Vue 3

This article provides a step-by-step guide for setting up a [Vite](#) project with a JavaScript environment and integrating the Syncfusion Vue Avatar component using the [Composition API](#) / [Options API](#).

The **Composition API** is a new feature introduced in Vue.js 3 that provides an alternative way to organize and reuse component logic. It allows developers to write components as functions that use smaller, reusable functions called composition functions to manage their properties and behavior.

The **Options API** is the traditional way of writing Vue.js components, where the component logic is organized into a series of options that define the component's properties and behavior. These options include data, methods, computed properties, watchers, lifecycle hooks, and more.

Prerequisites

[System requirements for Syncfusion Vue UI components](#)

### Set up the Vite project

A recommended approach for beginning with Vue is to scaffold a project using [Vite](#). To create a new Vite project, use one of the commands that are specific to either NPM or Yarn.

```
`bash
```

```
npm create vite@latest
```

```
,
```

or

```
`bash
```

```
yarn create vite
```

```
,
```

Using one of the above commands will lead you to set up additional configurations for the project as below:

1. Define the project name: We can specify the name of the project directly. Let's specify the name of the project as **my-project** for this article.

```
`bash
```

```
? Project name: » my-project
```

```
,
```

2. Select **Vue** as the framework. It will create a Vue 3 project.

```
`bash
```

```
? Select a framework: » - Use arrow-keys. Return to submit.
```

Vanilla

Vue

React

Preact

Lit

Svelte

Others

,

3. Choose **JavaScript** as the framework variant to build this Vite project using JavaScript and Vue.

```
`bash
```

? Select a variant: » - Use arrow-keys. Return to submit.

JavaScript

TypeScript

Customize with create-vue ↗

Nuxt ↗

,

4. Upon completing the aforementioned steps to create the **my-project**, run the following command to install its dependencies:

```
`bash
```

```
cd my-project
```

```
npm install
```

,

or

```
`bash
```

```
cd my-project
```

```
yarn install
```

,

Now that **my-project** is ready to run with default settings, let's add Syncfusion components to the project.

#### Add Syncfusion Vue packages

Syncfusion Vue component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion Vue components in the project, install the corresponding npm package.

This article uses the [Vue Avatar component](#) as an example. To use the Vue Avatar component in the project, the **@syncfusion/ej2-vue-layouts** package needs to be installed using the following command:

```
`bash
```

```
npm install @syncfusion/ej2-vue-layouts --save
```

`

or

`bash

yarn add @syncfusion/ej2-vue-layouts

`

### Import Syncfusion CSS styles

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, [CRG](#) and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to themes in a Vue project.

In this article, **Material** theme is applied using CSS styles, which are available in installed packages. The necessary **Material** CSS styles for the Avatar component and its dependents were imported into the `<style>` section of **src/App.vue** file.

#### ~/SRC/APP.VUE

```
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-layouts/styles/material.css";
</style>
```

### Add Syncfusion Vue component

Follow the below steps to add the Vue Avatar component using **Composition API** or **Options API**:

1.Add an HTML span element with **e-avatar** class into the section of the **App.vue** file in **src** directory.

#### ~/SRC/APP.VUE

```
<template>
<div id='element'>
<span class="e-avatar e-avatar-xlarge"></span>
<span class="e-avatar e-avatar-large"></span>
<span class="e-avatar"></span>
<span class="e-avatar e-avatar-small"></span>
<span class="e-avatar e-avatar-xsmall"></span>
</div>
</template>
```

Here is the summarized code for the above steps in the **src/App.vue** file:

#### ~/SRC/APP.VUE

```
<template>
<div id='element'>
<span class="e-avatar e-avatar-xlarge"></span>
<span class="e-avatar e-avatar-large"></span>
<span class="e-avatar"></span>
<span class="e-avatar e-avatar-small"></span>
<span class="e-avatar e-avatar-xsmall"></span>
</div>
</template>
<style>
```

```
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-layouts/styles/material.css";
#element {
  display: block;
  width: 300px;
  margin: 130px auto;
  border-radius: 3px;
  justify-content: center;
}
/* Add your custom avatar image. */
.e-avatar {
  background-image:
  url(https://ej2.syncfusion.com/vue/documentation/samples/avatar/media-formats-cs1/pic01.png);
  margin: 2px;
}
</style>
```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run dev
```

```
`
```

or

```
`bash
```

```
yarn run dev
```

```
`
```

The output will appear as follows:

For migrating from Vue 2 to Vue 3, refer to the [migration](#) documentation.

## Types in Vue Avatar component

This section explains different types of avatar.

### Avatar size

The Essential JS 2 Avatar has the following predefined sizes that can be used with the `.e-avatar` class to change the appearance of the avatar.

Class Name	Description
<code>:-----:</code>	<code>:-----:</code>
<code>e-avatar-xlarge</code>	Displays xlarge size avatar.
<code>e-avatar-large</code>	Displays apply large size avatar.
<code>e-avatar</code>	Displays apply default size avatar.
<code>e-avatar-small</code>	Displays apply small size avatar.
<code>e-avatar-xsmall</code>	Displays apply xsmall size avatar.

### APP.VUE

```
<template>
  <div id='element'>
    <span class="e-avatar e-avatar-xlarge"></span>
    <span class="e-avatar e-avatar-large"></span>
    <span class="e-avatar"></span>
    <span class="e-avatar e-avatar-small"></span>
    <span class="e-avatar e-avatar-xsmall"></span>
  </div>
</template>
<script>
import Vue from "vue";
export default {
  data() {
    return {};
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-layouts/styles/material.css";
#element {
  display: block;
  width: 300px;
  margin: 100px auto;
  border-radius: 3px;
}
.e-avatar {
  background-image: url(./pic01.png);
}
</style>
```

{% previewsample "page.domainurl/code-snippet/avatar/size-cs1" %}

## Avatar types

The types of Essential JS 2 avatar are:

- Default
- Circle

### Default

The default style of the avatar is rectangular shape with rounded corners, which can be applied from adding the modifier class `.e-avatar` to the target element.

#### APP.VUE

```
<template>
  <div id='element'>
    <span class="e-avatar e-avatar-xlarge">RT</span>
    <span class="e-avatar e-avatar-large">RT</span>
    <span class="e-avatar">RT</span>
    <span class="e-avatar e-avatar-small">RT</span>
    <span class="e-avatar e-avatar-xsmall">RT</span>
  </div>
</template>
<script>
import Vue from "vue";
export default {
  data() {
    return {};
  }
}
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-layouts/styles/material.css";
  #element {
    display: block;
    width: 260px;
    margin: 100px auto;
    border-radius: 3px;
  }
</style>
```

{% previewsample "page.domainurl/code-snippet/avatar/default-cs1" %}

### Circle

The circle avatar style can be applied by adding the modifier class `.e-avatar-circle` to the target element.

#### APP.VUE

```
<template>
  <div id='element'>
    <span class="e-avatar e-avatar-xlarge e-avatar-circle">SJ</span>
    <span class="e-avatar e-avatar-large e-avatar-circle">SJ</span>
    <span class="e-avatar e-avatar-circle">SJ</span>
    <span class="e-avatar e-avatar-small e-avatar-circle">SJ</span>
    <span class="e-avatar e-avatar-xsmall e-avatar-circle">SJ</span>
  </div>
</template>
```

```

    </div>
</template>
<script>
import Vue from "vue";
export default {
  data() {
    return {};
  }
}
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-layouts/styles/material.css";
  #element {
    display: block;
    width: 300px;
    margin: 100px auto;
    border-radius: 3px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/avatar/circle-cs1" %}

## How To

### Avatar customization in Vue Avatar component

#### Color customization

The avatar comes with default background color (grey). This can be easily customized to desired color by adding custom class or directly selecting the avatar class from the CSS.

#### APP.VUE

```

<template>
  <div id='element'>
    <span class="e-avatar e-avatar-xlarge e-avatar-circle
green">AJ</span>
    <span class="e-avatar e-avatar-xlarge e-avatar-circle
violet">JK</span>
    <span class="e-avatar e-avatar-xlarge e-avatar-circle
rose">EL</span>
    <span class="e-avatar e-avatar-xlarge e-avatar-circle
blue">SR</span>
    <span class="e-avatar e-avatar-xlarge e-avatar-circle red">PD</span>
  </div>
</template>
<script>
import Vue from "vue";
export default {
  data() {
    return {};
  }
}
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-layouts/styles/material.css";

```

```

#element {
  display: flex;
  width: 400px;
  margin: 100px auto;
  border-radius: 3px;
  justify-content: center;
}
.e-avatar {
  margin: 2px;
}
.e-avatar.green {
  background-color: #87eb87;
}
.e-avatar.violet {
  background-color: #ee82ee;
}
.e-avatar.blue {
  background-color: #7171e4;
}
.e-avatar.red {
  background-color: #d86e6e;
}
.e-avatar.rose {
  background-color: #bc8f8f;
}
}
</style>

```

{% previewsample "page.domainurl/code-snippet/avatar/color-cs1" %}

### *Customize avatar sizes*

Even though the avatar comes with five predefined sizes, sometimes it's not enough. So, the avatar is designed in such a way that the width and height will be relative to font-size. By changing the font-size of the avatar element, you can change the width and height automatically.

### **APP.VUE**

```

<template>
  <div id='element'>
    <span class="e-avatar">26px</span>
    <span class="e-avatar">24px</span>
    <span class="e-avatar">22px</span>
    <span class="e-avatar">20px</span>
    <span class="e-avatar">18px</span>
  </div>
</template>
<script>
import Vue from "vue";
export default {
  data() {
    return {};
  }
}
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-layouts/styles/material.css";

```

```

#element {
  display: block;
  width: 400px;
  margin: 100px auto;
  border-radius: 3px;
}
#element :nth-child(5) {
  font-size: 18px;
}
#element :nth-child(4) {
  font-size: 20px;
}
#element :nth-child(3) {
  font-size: 22px;
}
#element :nth-child(2) {
  font-size: 24px;
}
#element :nth-child(1) {
  font-size: 26px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/avatar/custom-size-cs1" %}

#### Use various media in avatar

Avatars can be used with a wide variety of media formats like SVG, font-icons, images, letters, words, etc. Some of them are given below.

#### APP.VUE

```

<template>
  <div id='element'>
    <div class="sample_container avatar-types">
      <div class="avatar-block">
        <!-- Card Component -->
        <div class="e-card e-avatar-showcase">
          <div class="e-card-content">
            <!-- XLarge Circle Avatar Component -->
            <div class="e-avatar e-avatar-xlarge e-avatar-circle">
              
            </div>
          </div>
          <div class="e-card-content">
            <div>Image</div>
          </div>
        </div>
      </div>
      <div class="avatar-block">
        <!-- Card Component -->
        <div class="e-card e-avatar-showcase">
          <div class="e-card-content">
            <!-- XLarge Circle Avatar Component -->

```

```

        <div class="e-avatar e-avatar-xlarge e-avatar-
circle">
            <div class="svg_icons chrome"></div>
        </div>
    </div>
    <div class="e-card-content">
        <div>SVG</div>
    </div>
</div>
<div class="avatar-block">
    <!-- Card Component -->
    <div class="e-card e-avatar-showcase">
        <div class="e-card-content">
            <!-- XLarge Circle Avatar Component -->
            <div class="e-avatar e-avatar-xlarge e-avatar-
circle">GR</div>
        </div>
        <div class="e-card-content">
            <div>Initial</div>
        </div>
    </div>
</div>
<div class="avatar-block">
    <!-- Card Component -->
    <div class="e-card e-avatar-showcase">
        <div class="e-card-content">
            <!-- XLarge Circle Avatar Component -->
            <div class="e-avatar e-avatar-xlarge e-avatar-
circle">
                <div class="e-people icons"></div>
            </div>
        </div>
        <div class="e-card-content">
            <div>Font Icon</div>
        </div>
    </div>
</div>
<div class="avatar-block">
    <!-- Card Component -->
    <div class="e-card e-avatar-showcase">
        <div class="e-card-content">
            <!-- XLarge Circle Avatar Component -->
            <div class="e-avatar e-avatar-xlarge e-avatar-
circle">User</div>
        </div>
        <div class="e-card-content">
            <div>Word</div>
        </div>
    </div>
</div>
<div class="avatar-block">
    <!-- Card Component -->
    <div class="e-card e-avatar-showcase">
        <div class="e-card-content">
            <!-- XLarge Circle Avatar Component -->

```

```

        <div class="e-avatar e-avatar-xlarge e-avatar-circle
custom">
            <div class="e-people icons"></div>
        </div>
    </div>
    <div class="e-card-content">
        <div>Custom</div>
    </div>
</div>
</div>
</template>
<script>
import Vue from "vue";
export default {
    data() {
        return {};
    }
}
</script>
<style>
    @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
    @import "../node_modules/@syncfusion/ej2-layouts/styles/material.css";
    #element {
        width: auto;
        margin: auto;
        border-radius: 3px;
        justify-content: center;
    }
    /* Media Queries for various devices */
    @media only screen and (max-width: 965px) {
        .sample_container.avatar-types {
            max-width: 265px;
            margin: auto;
            margin-top: 0;
        }
        .e-avatar-showcase.e-card {
            width: 120px;
        }
    }
    @media only screen and (min-width: 965px) {
        .sample_container.avatar-types {
            max-width: 488px;
            margin: auto;
            margin-top: 35px;
        }
        .e-avatar-showcase.e-card {
            width: 150px;
        }
    }
    .sample_container.avatar-types .avatar-block {
        display: inline-block;
        vertical-align: top;
    }
    /* Avatar image source in 'background-image' property */
    .e-avatar img.image {

```

```

        background-repeat: no-repeat;
        background-size: cover;
        background-position: center;
    }
    /* SVG Icons */
    .chrome {
        background: transparent url("data:image/svg+xml,%3Csvg

## Integrate avatar into listview in Vue Avatar component

Avatar can be integrated into various components to make a wide variety of applications. Some of the integrations are shown in the following section.

*ListView*

Avatar is integrated into the listview to create contacts applications. The `xsmall` size avatar is used to match the size of the list item. Letters and images are also used as avatar content.

**APP.VUE**

```
<template>
  <div id='element'>
    <!-- ListView element -->
    <ejs-listview id='letterAvatarList' :dataSource='dataSource'
:sortOrder='sortOrder' showHeader='true'
    headerTitle='Contacts' :template='listTemplate' >
    </ejs-listview>
  </div>
</template>
<script>
import Vue from "vue";
import { ListViewPlugin } from "@syncfusion/ej2-vue-lists";
Vue.use(ListViewPlugin);
var listtemplateVue = Vue.component("demo", {
  template: ` <div class="listWrapper">
    <span :class="['e-avatar e-avatar-small e-avatar-circle']" v-
if="data.avatar !== ''">{{data.avatar}}</span>
    <span :class="[data.pic + ' e-avatar e-avatar-small e-avatar-
circle']" v-if="data.pic !== ' ' "> </span>
    <span class="list-text">{{data.text}}</span>
  </div>`,
  data() {
    return {
      data: {}
    };
  }
});
export default {
  data() {
    return {
      dataSource: [
        { id: 's_01', text: 'Robert', avatar: '', pic: 'pic04' },
        { id: 's_02', text: 'Nancy', avatar: 'N', pic: '' },
        { id: 's_05', text: 'John', pic: 'pic01', avatar: '' },
        { id: 's_03', text: 'Andrew', avatar: 'A', pic: '' },
        { id: 's_06', text: 'Michael', pic: 'pic02', avatar: '' },
        { id: 's_07', text: 'Steven', pic: 'pic03', avatar: '' },
        { id: 's_08', text: 'Margaret', avatar: 'M', pic: '' }
      ],
      listTemplate: function () {
        return { template : listtemplateVue}
      },
      sortOrder: 'Ascending'
    };
  }
}
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-layouts/styles/material.css";
  #element {
```

```

        width: 400px;

### Integrate avatar into badge in Vue Avatar component

The badge is dependent and supportive component, and it can be used with avatar to create a notification avatar.

The default avatar (.e-avatar) and circle avatar (.e-avatar-circle) have been used with notification badges (.e-badge-notification) in the following sample.

### APP.VUE

```

<template>
  <div id='element'>
    <div class="sample_container avatar-badge">
      <div class="avatar-block">
        <!-- Card Component -->
        <div class="e-card e-avatar-showcase">
          <div class="e-card-content">
            <div class="avatar-sub-block">
              <!-- xSmall Avatar-->
              <div class="e-avatar e-avatar-xsmall">
                
              </div>
              <!-- Notification Badge -->
              <span class="e-badge e-badge-primary e-badge-
overlap e-badge-notification e-badge-circle">6</span>
            </div>
          </div>
        </div>
      </div>
    </div>
  </div>

```

```

<!-- Small Avatar-->
  <div class="e-avatar e-avatar-small">
    
  </div>
  <!-- Notification Badge -->
  <span class="e-badge e-badge-primary e-badge-
overlap e-badge-notification e-badge-circle">12</span>
</div>
<div class="avatar-sub-block">
  <!-- Avatar-->
  <div class="e-avatar">
    
  </div>
  <!-- Notification Badge -->
  <span class="e-badge e-badge-primary e-badge-
overlap e-badge-notification">46</span>
</div>
<div class="avatar-sub-block">
  <!-- Large Avatar-->
  <div class="e-avatar e-avatar-large">
    
  </div>
  <!-- Notification Badge -->
  <span class="e-badge e-badge-primary e-badge-
overlap e-badge-notification">82</span>
</div>
<div class="avatar-sub-block">
  <!-- xLarge Avatar-->
  <div class="e-avatar e-avatar-xlarge">
    
  </div>
  <!-- Notification Badge -->
  <span class="e-badge e-badge-primary e-badge-
overlap e-badge-notification">99+</span>
</div>
</div>
</div>
<div class="circleAvatar avatar-block">
  <!-- Card Component -->
  <div class="e-card e-avatar-showcase">
    <div class="e-card-content">
      <div class="avatar-sub-block">
        <!-- xSmall Circle Avatar-->
        <div class="e-avatar e-avatar-circle e-avatar-
xsmall">

```

```

    </div>
    <!-- Notification Badge -->
    <span class="e-badge e-badge-primary e-badge-
overlap e-badge-notification e-badge-circle">6</span>
    </div>
    <div class="avatar-sub-block">
    <!-- Small Circle Avatar-->
    <div class="e-avatar e-avatar-circle e-avatar-
small">
        
        </div>
        <!-- Notification Badge -->
        <span class="e-badge e-badge-primary e-badge-
overlap e-badge-notification e-badge-circle">12</span>
        </div>

## Badge

### Getting Started with the Vue Badge Component in Vue 2

This article provides a step-by-step guide for setting up a Vue 2 project using [Vue-CLI](#) and integrating the Syncfusion Vue Badge component using the [Composition API](#) / [Options API](#).

#### Prerequisites

##### [System requirements for Syncfusion Vue UI components](#)

#### Setting up the Vue 2 project

To generate a Vue 2 project using Vue-CLI, use the [vue create](#) command. Follow these steps to install Vue CLI and create a new project:

```
`bash
```

```
npm install -g @vue/cli
```

```
vue create quickstart
```

```
cd quickstart
```

```
npm run serve
```

```
,
```

```
or
```

```
`bash
```

```
yarn global add @vue/cli
```

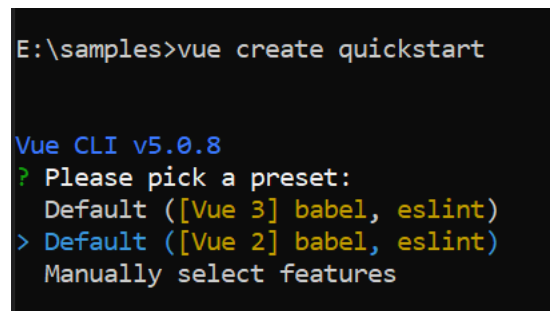

```
vue create quickstart
```

```
cd quickstart
```

```
yarn run serve
```

```
,
```

When creating a new project, choose the option `Default ([Vue 2] babel, eslint)` from the menu.

```
E:\samples>vue create quickstart

Vue CLI v5.0.8
? Please pick a preset:
  Default ([Vue 3] babel, eslint)
> Default ([Vue 2] babel, eslint)
  Manually select features
```

Once the `quickstart` project is set up with default settings, proceed to add Syncfusion components to the project.

#### Add Syncfusion Vue packages

Syncfusion packages are available at [npmjs.com](https://www.npmjs.com). To use Vue components, install the required npm package.

This article uses the [Vue Badge component](#) as an example. Install the `@syncfusion/ej2-vue-notifications` package by running the following command:

```
`bash
```

```
npm install @syncfusion/ej2-vue-notifications --save
```

```
,
```

```
or
```

```
`bash
```

```
yarn add @syncfusion/ej2-vue-notifications
```

```
,
```

#### Import Syncfusion CSS styles

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, [CRG](#) and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to themes in a Vue project.

In this article, the **Material** theme is applied using CSS styles, which are available in installed packages. The necessary **Material** CSS styles for the Badge component and its dependents were imported into the `<style>` section of **src/App.vue** file.

#### ~/SRC/APP.VUE

```
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-notifications/styles/material.css";
</style>
```

Add Syncfusion Vue component

Add an HTML span element with **e-badge** class inside any wrapper element (**h1**) into the `<template>` section of the **App.vue** file in **src** directory.

#### ~/SRC/APP.VUE

```
<template>
<div id="app">
<h1>Badge Component <span class="e-badge">New</span></h1>
</div>
</template>
```

We can also use [CRG](#) to generate combined component styles.

Here is the summarized code for the above steps in the **src/App.vue** file:

#### APP.VUE

```
<template>
  <div id='element'>
    <h1>Badge Component <span class="e-badge e-badge-
primary">New</span></h1>
  </div>
</template>
<script>
export default {
  data() {
    return {};
  }
}
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-vue-
notifications/styles/material.css";
  #element {
    display: flex;
    width: 400px;
    margin: auto;
    border: 1px solid #dddddd;
    border-radius: 3px;
    justify-content: center;
  }
</style>
```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run serve
```

```
,
```

or

```
`bash
```

```
yarn run serve
```

```
,
```

```
{% previewsample "page.domainurl/code-snippet/badge/getting-started-cs1" %}
```

### Getting Started with the Vue Badge Component in Vue 3

This article provides a step-by-step guide for setting up a [Vite](#) project with a JavaScript environment and integrating the Syncfusion Vue Badge component using the [Composition API](#) / [Options API](#).

The **Composition API** is a new feature introduced in Vue.js 3 that provides an alternative way to organize and reuse component logic. It allows developers to write components as functions that use smaller, reusable functions called composition functions to manage their properties and behavior.

The **Options API** is the traditional way of writing Vue.js components, where the component logic is organized into a series of options that define the component's properties and behavior. These options include data, methods, computed properties, watchers, lifecycle hooks, and more.

### Prerequisites

[System requirements for Syncfusion Vue UI components](#)

### Set up the Vite project

A recommended approach for beginning with Vue is to scaffold a project using [Vite](#). To create a new Vite project, use one of the commands that are specific to either NPM or Yarn.

```
`bash
```

```
npm create vite@latest
```

```
,
```

or

```
`bash
```

```
yarn create vite
```

```
,
```

Using one of the above commands will lead you to set up additional configurations for the project as below:

1. Define the project name: We can specify the name of the project directly. Let's specify the name of the project as **my-project** for this article.

```
`bash
```

```
? Project name: » my-project
```

```
,
```

2. Select **Vue** as the framework. It will create a Vue 3 project.

```
`bash
```

```
? Select a framework: » - Use arrow-keys. Return to submit.
```

```
Vanilla
```

```
Vue
```

```
React
```

```
Preact
```

```
Lit
```

```
Svelte
```

```
Others
```

```
,
```

3. Choose **JavaScript** as the framework variant to build this Vite project using JavaScript and Vue.

```
`bash
```

```
? Select a variant: » - Use arrow-keys. Return to submit.
```

```
JavaScript
```

```
TypeScript
```

```
Customize with create-vue ↗
```

```
Nuxt ↗
```

```
,
```

4. Upon completing the aforementioned steps to create the **my-project**, run the following command to install its dependencies:

```
`bash
```

```
cd my-project
```

```
npm install
```

```
,
```

```
or
```

```
`bash
```

```
cd my-project
```

```
yarn install
```

```
,
```

Now that `my-project` is ready to run with default settings, let's add Syncfusion components to the project.

### Add Syncfusion Vue packages

Syncfusion Vue component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion Vue components in the project, install the corresponding npm package.

This article uses the [Vue Badge component](#) as an example. To use the Vue Badge component in the project, the `@syncfusion/ej2-vue-notifications` package needs to be installed using the following command:

```
`bash
npm install @syncfusion/ej2-vue-notifications --save
`
```

or

```
`bash
yarn add @syncfusion/ej2-vue-notifications
`
```

### Import Syncfusion CSS styles

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, [CRG](#) and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to themes in a Vue project.

In this article, `Material` theme is applied using CSS styles, which are available in installed packages. The necessary `Material` CSS styles for the Badge component and its dependents were imported into the `<style>` section of `src/App.vue` file.

#### ~/SRC/APP.VUE

```
<style>
@import "../node_modules/@syncfusion/ej2-vue-
notifications/styles/material.css";
</style>
```

### Add Syncfusion Vue component

Follow the below steps to add the Vue Badge component using `Composition API` or `Options API`:

1. Add an HTML span element with `e-badge` class inside any wrapper element (`h1`) into the `section` of the `App.vue` file in `src` directory.

#### ~/SRC/APP.VUE

```
<template>
<div id='element'>
<h1>Badge Component <span class="e-badge e-badge-primary">New</span></h1>
</div>
</template>
```

Here is the summarized code for the above steps in the `src/App.vue` file:

~/SRC/APP.VUE

```
<template>
<div id='element'>
<h1>Badge Component <span class="e-badge e-badge-primary">New</span></h1>
</div>
</template>
<style>
@import "../node_modules/@syncfusion/ej2-vue-
notifications/styles/material.css";
#element {
display: flex;
width: 400px;
margin: auto;
border: 1px solid #dddddd;
border-radius: 3px;
justify-content: center;
}
</style>
```

## Run the project

To run the project, use the following command:

```
`bash
```

```
npm run dev
```

```
`
```

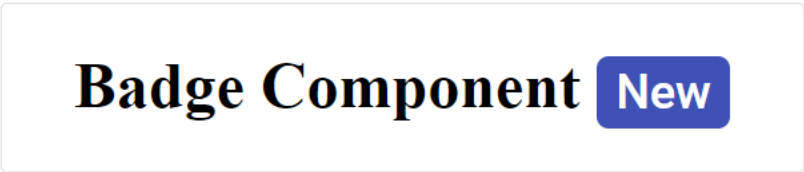

or

```
`bash
```

```
yarn run dev
```

```
`
```

The output will appear as follows:

For migrating from Vue 2 to Vue 3, refer to the [migration](#) documentation.

## Types in Vue Badge component

This section explains different styles and types of the badges.

### Badge styles

The Essential JS 2 Badge has the following predefined styles that can be used with `.e-badge` class to change the appearance of a badge.

Class Name	Description
:-----	:-----
e-badge-primary	Represents a primary notification.
e-badge-secondary	Represents a secondary notification.
e-badge-success	Represents a positive notification.
e-badge-danger	Represents a negative notification.
e-badge-warning	Represents notification with caution.
e-badge-info	Represents an informative notification.
e-badge-light	Represents notification in light variant.
e-badge-dark	Represents notification in dark variant.

### APP.VUE

```
<template>
  <div id='element'>
    <div class="sample_container">
      <div class="block" style="display:inline-block">
        <div class="e-card e-badge-showcase">
          <div class="e-card-content">
            <div>
              <span class="e-badge e-badge-
primary">Primary</span>
            </div>
          </div>
          <div class="e-card-content">
            <div>
              <code>.e-badge-primary</code>
            </div>
          </div>
        </div>
      </div>
      <div class="block" style="display:inline-block">
        <div class="e-card e-badge-showcase">
          <div class="e-card-content">
            <span class="e-badge e-badge-
secondary">Secondary</span>
          </div>
          <div class="e-card-content">
            <code>.e-badge-secondary</code>
          </div>
        </div>
      </div>
      <div class="block" style="display:inline-block">
        <div class="e-card e-badge-showcase">
          <div class="e-card-content">
            <span class="e-badge e-badge-success">Success</span>
          </div>
        </div>
      </div>
    </div>
  </div>
```

```

        </div>
        <div class="e-card-content">
            <code>.e-badge-success</code>
        </div>
    </div>
</div>
<div class="block" style="display:inline-block">
    <div class="e-card e-badge-showcase">
        <div class="e-card-content">
            <span class="e-badge e-badge-danger">Danger</span>
        </div>
        <div class="e-card-content">
            <code>.e-badge-danger</code>
        </div>
    </div>
</div>
<div class="block" style="display:inline-block">
    <div class="e-card e-badge-showcase">
        <div class="e-card-content">
            <span class="e-badge e-badge-warning">Warning</span>
        </div>
        <div class="e-card-content">
            <code>.e-badge-warning</code>
        </div>
    </div>
</div>
<div class="block" style="display:inline-block">
    <div class="e-card e-badge-showcase">
        <div class="e-card-content">
            <span class="e-badge e-badge-info">Info</span>
        </div>
        <div class="e-card-content">
            <code>.e-badge-info</code>
        </div>
    </div>
</div>
<div class="block" style="display:inline-block">
    <div class="e-card e-badge-showcase">
        <div class="e-card-content">
            <span class="e-badge e-badge-light">Light</span>
        </div>
        <div class="e-card-content">
            <code>.e-badge-light</code>
        </div>
    </div>
</div>
<div class="block" style="display:inline-block">
    <div class="e-card e-badge-showcase">
        <div class="e-card-content">
            <span class="e-badge e-badge-dark">Dark</span>
        </div>
        <div class="e-card-content">
            <code>.e-badge-dark</code>

### Badge types

The types of Essential JS 2 badges are as follows:

- Circle
- Pill
- Link
- Notification
- Overlap
- Dot
- Position

### Circle

The circle badge style can be applied by adding the modifier class `e-badge-circle` to the target element.

### APP.VUE

```
<template>
  <div id='element'>
    <div style="position:relative;display:inline-block;margin:20px 20px
10px 20px;">
      <div class="skype svg_icons"></div>
      <span class="e-badge e-badge-success e-badge-overlap e-badge-
notification e-badge-circle">18</span>
    </div>
    <div style="position:relative;display:inline-block;margin:20px 20px
10px 20px;">
      <div class="twitter svg_icons"></div>

### Pill

The pill badge style can be applied by adding the modifier class `e-badge-pill` to the target element.

### APP.VUE

```

<template>
    <div id='element'>
        <h1>Badge Component <span class="e-badge e-badge-primary e-badge-
        pill">New</span></h1>
    </div>
</template>
<script>
import Vue from "vue";
export default {
    data() {

```

```

    return {};
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-vue-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
notifications/styles/material.css";
#element {
  display: flex;
  width: 400px;
  margin: auto;
  border: 1px solid #dddddd;
  border-radius: 3px;
  justify-content: center;
  position: relative;
  top: 130px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/badge/pill-cs1" %}

#### [Link](#)

When badge modifier classes are applied to the anchor tag, the badge's appearance will change from normal state to hover state on mouseover.

#### **APP.VUE**

```

<template>
  <div id='element'>
    <div style="display: inline-block; margin-top: 15px;">
      <a href="#" class="e-badge e-badge-primary">Link Badge</a>
    </div>
  </div>
</template>
<script>
import Vue from "vue";
export default {
  data() {
    return {};
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-vue-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
notifications/styles/material.css";
#element {
  display: flex;
  width: 400px;
  height: 50px;
  margin: auto;
  border: 1px solid #dddddd;
  border-radius: 3px;
  justify-content: center;
  position: relative;
}

```

```

        top: 130px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/badge/link-cs1" %}

### Notification

The notification badge style can be applied by adding the modifier class `.e-badge-notification` to the target element. Notification badges are used when a content or a context needs special attention. While using the notification badge, set the parent element to `position: relative`.

### APP.VUE

```

<template>
  <div id='element'>
    <div style="position:relative;display:inline-block;margin:20px 20px 10px 20px;">

### Dot

Dot can be applied by adding the modifier class `e-badge-dot` to the target element. Dot badges are similar to notification badges, but in a minimalistic way. While using the dot badge, set the parent element to `position: relative`.

### APP.VUE

```

<template>
  <div id='element'>

### Overlap

The overlap badge can be used with notification or dot badge, which overlaps with the target element by adding the modifier class `e-badge-overlap`. While using the overlap badge, set the parent element to `position: relative`.

### APP.VUE

```
<template>

### Position

The default position of the notification or dot badge is top. But, the position can be changed to **bottom** using the modifier class **.e-badge-bottom**. For example, the bottom class modifier is used with dot badge to display the status in the avatar as shown in the following sample.

## How To

### Badge customization in Vue Badge component

#### *Colour customization*

Even though badges come with **8 predefined colors**, you can also customize the colour of the badge as desired.

#### **APP.VUE**

```
<template>
  <div id='element'>
    <h1>Color Customization <span class="e-badge e-badge-primary e-
badge-pill green">New</span></h1>
    <h1>Color Customization <span class="e-badge e-badge-primary e-
badge-pill bue">New</span></h1>
    <h1>Color Customization <span class="e-badge e-badge-primary e-
badge-pill purple">New</span></h1>
    <h1>Color Customization <span class="e-badge e-badge-primary e-
badge-pill gradient">New</span></h1>
  </div>
</template>
<script>
import Vue from "vue";
export default {
  data() {
    return {};
  }
}
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-vue-
notifications/styles/material.css";
  #element {
    display: table;
  }
</style>
```

```

width: 560px;
margin: auto;
height: 200px;
border: 1px solid #dddddd;
border-radius: 3px;
justify-content: center;
position: relative;
top: 55px;
}
h1 {
text-align: center;
}
#element .e-badge.green {
background: #329378;
color: #fff;
}
#element .e-badge.blue {
background: #5f65b8;
color: #fff;
}
#element .e-badge.gradient {
background: #4776E6;
/* fallback for old browsers */
background: -webkit-linear-gradient(to top, #8E54E9, #4776E6);
/* Chrome 10-25, Safari 5.1-6 */
background: linear-gradient(to top, #8E54E9, #4776E6);
/* W3C, IE 10+/ Edge, Firefox 16+, Chrome 26+, Opera 12+, Safari 7+ */
color: #fff;
}
#element .e-badge.purple {
background: #9a428f;
color: #fff;
}
}
</style>

```

```
{% previewsample "page.domainurl/code-snippet/badge/color-cs1" %}
```

### Customize badge size

Badges are designed to change its size based on the content. To change the size of a badge, adjust the font size of the badge.

### APP.VUE

```

<template>
  <div id='element'>
    <h1>Badge Component <span class="e-badge e-badge-primary
size_1">New</span></h1>
    <h1>Badge Component <span class="e-badge e-badge-primary
size_2">New</span></h1>
    <h1>Badge Component <span class="e-badge e-badge-primary
size_3">New</span></h1>
  </div>
</template>
<script>
import Vue from "vue";
export default {

```

```

data() {
  return {};
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
notifications/styles/material.css";
#element {
  display: block;
  width: 400px;
  margin: auto;
  border: 1px solid #dddddd;
  border-radius: 3px;
  justify-content: center;
}
h1 {
  text-align: center;
}
.e-badge.size_1 {
  font-size: 12px;
}
.e-badge.size_2 {
  font-size: 16px;
}
.e-badge.size_3 {
  font-size: 18px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/badge/size-cs1" %}

### Custom position

Even though the badges support the conventional **top** and **bottom** positions, the position of the badges can be changed as desired. This can be done by adding a custom class to the badge element to override the default position applied from the source.

### APP.VUE

```

<template>
  <div id='element'>
    <div style="width: 200px;margin: 10px auto;">

### Integrate badge into listview in Vue Badge component

The badges can be integrated with the `listview` component to indicate new notification with colour based on priority.

In the following sample, `default` badges are used and there is no need to customize the badge size. The component will automatically adjust the size based on the container element.

### APP.VUE

```

<template>
  <div id='element'>
    <div class="sample_container badge-list">
      <!-- Listview element -->
      <ejs-listview id='lists' :dataSource='data' :fields='fields'
showHeader='true' headerTitle='Inbox' :template='template' >
      </ejs-listview>
    </div>
  </div>
</template>
<style>
@import "../node_modules/@syncfusion/ej2-vue-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
notifications/styles/material.css";
#element {
  display: block;
  width: 400px;
  margin: auto;
  border-radius: 3px;
  justify-content: center;
}
.sample_container.badge-list {
  max-width: 350px;
  margin: auto;
}
#lists {
  margin: auto;
  border: 1px solid rgba(0, 0, 0, 0.12)
}
#lists .e-list-item {
  cursor: pointer;
  height: 50px;
  line-height: 48px;
  border: 0;
}
#lists ul li:first-child {
  display: none;
}
/* SVG Icons and Customization */
.list_svg {
  width: 24px;
  height: 24px;

### Dynamic badge content in Vue Badge component

Badges in real-time needs to be updated dynamically based on the requirements. In this sample, using Vue data binding, the badges content will be updated dynamically. Click the increment button to change the badge value.

### APP.VUE

```

                    icons: "updates",
                    type: "Primary"
                },
                {
                    id: "p_05",
                    text: "Starred",
                    messages: "",
                    badge: "",
                    icons: "starred",
                    type: "All Labels"
                },
            ]
        };
    }
};

```

```

        id: "p_06",
        text: "Important",
        messages: 2,
        badge: "e-badge e-badge-danger",
        icons: "important",
        type: "All Labels"
      },
      {
        id: "p_07",
        text: "Sent",
        messages: "",
        badge: "",
        icons: "sent",
        type: "All Labels"
      },
      {
        id: "p_08",
        text: "Outbox",
        messages: "",
        badge: "",
        icons: "outbox",
        type: "All Labels"
      },
      {
        id: "p_09",
        text: "Drafts",
        messages: 7,
        badge: "e-badge e-badge-warning",
        icons: "draft",
        type: "All Labels"
      }
    ],
    title: "Inbox",
    header: true,
    listTemplate: function() {
      return { template: templateVue };
    },
    fieldData: { groupBy: "type" }
  };
},
methods: {
  butonClick: function() {
    let badgeElements = Array.prototype.slice.call(
      document.getElementById("lists").getElementsByClassName("e-
badge")
    );
    badgeElements.forEach((element) => {
      element.textContent =
        Number(element.textContent.split(" ")[0]) + 1 + " New";
    });
  }
}
}
</script>

## Barcode

### Getting Started with the Vue Barcode Component in Vue 2

This article provides a step-by-step guide for setting up a Vue 2 project using [Vue-CLI](#) and integrating the Syncfusion Vue Barcode component using the [Composition API](#) / [Options API](#).

#### Prerequisites

##### [System requirements for Syncfusion Vue UI components](#)

#### Dependencies

The following list of dependencies are required to use the **Barcode Generator** component in your application.

```

`javascript
|-- @syncfusion/ej2-vue-barcode-generator
|-- @syncfusion/ej2-base
|-- @syncfusion/ej2-data
|-- @syncfusion/ej2-navigations
|-- @syncfusion/ej2-inputs
|-- @syncfusion/ej2-popups
|-- @syncfusion/ej2-buttons
|-- @syncfusion/ej2-lists
|-- @syncfusion/ej2-splitbuttons
|-- @syncfusion/ej2-barcode-generator
|-- @syncfusion/ej2-vue-base
,

```

### Setting up the Vue 2 project

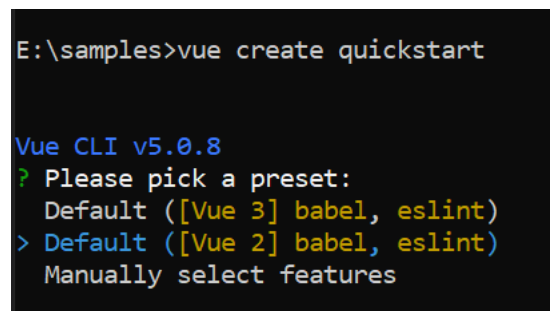

To generate a Vue 2 project using Vue-CLI, use the [vue create](#) command. Follow these steps to install Vue CLI and create a new project:

```
`bash
npm install -g @vue/cli
vue create quickstart
cd quickstart
npm run serve
`
```

or

```
`bash
yarn global add @vue/cli
vue create quickstart
cd quickstart
yarn run serve
`
```

When creating a new project, choose the option `Default ([Vue 2] babel, eslint)` from the menu.

```
E:\samples>vue create quickstart

Vue CLI v5.0.8
? Please pick a preset:
  Default ([Vue 3] babel, eslint)
> Default ([Vue 2] babel, eslint)
  Manually select features
```

Once the `quickstart` project is set up with default settings, proceed to add Syncfusion components to the project.

### Adding Syncfusion Vue packages

Syncfusion packages are available at [npmjs.com](https://www.npmjs.com). To use Vue components, install the required npm package.

This article uses the [Vue Barcode component](#) as an example. Install the `@syncfusion/ej2-vue-barcode-generator` package by running the following command:

```
`bash
npm install @syncfusion/ej2-vue-barcode-generator --save
`

or
```

```
`bash
```

```
yarn add @syncfusion/ej2-vue-barcode-generator
```

```
,
```

### Add Syncfusion Vue component

Follow the below steps to add the Vue Barcode component using **Composition API** or **Options API**:

1\ First, import and register the Barcode component in the **script** section of the **src/App.vue** file. If you are using the **Composition API**, you should add the **setup** attribute to the **script** tag to indicate that Vue will be using the **Composition API**.

#### **COMPOSITION API (~SRC/APP.VUE)**

```
<script setup>
import { QRCodeGeneratorComponent as EjsQrcodegenerator } from
 '@syncfusion/ej2-vue-barcode-generator';
</script>
```

#### **OPTIONS API (~SRC/APP.VUE)**

```
<script>
import { QRCodeGeneratorComponent } from '@syncfusion/ej2-vue-barcode-
generator';
export default {
  components: {
    'ejs-qrcodegenerator': QRCodeGeneratorComponent
  }
}
</script>
```

2\ In the **template** section, define the Barcode component with [width](#), [height](#), [value](#), [mode](#) property.

#### **~/SRC/APP.VUE**

```
<template>
<div id="app" class="barcodeStyle">
<ejs-qrcodegenerator
id="barcode"
ref="barcodeControl"
:width="width"
:height="height"
:value="value"
:mode="mode"
></ejs-qrcodegenerator>
</div>
</template>
```

3\ Declare the value for **width**, **height**, **value**, **mode** property in the **script** section

#### **COMPOSITION API (~SRC/APP.VUE)**

```
<script setup>
const width = "200px";
const height = "150px";
```

```
const type = "Codabar";
const value = "123456789";
const mode = "SVG";
</script>
```

### **OPTIONS API (~SRC/APP.VUE)**

```
<script>
data () {
  return {
    width: "200px",
    height: "150px",
    type: "Codabar",
    value: "123456789",
    mode: "SVG",
  }
}
</script>
```

Here is the summarized code for the above steps in the **src/App.vue** file:

### **COMPOSITION API (~SRC/APP.VUE)**

```
<template>
  <div id="app" class="barcodeStyle">
    <ejs-barcodegenerator
      id="barcode"
      ref="barcodeControl"
      :width="width"
      :height="height"
      :type="type"
      :value="value"
      :mode="mode"
    ></ejs-barcodegenerator>
  </div>
</template>
<style>
  .barcodeStyle {
    height: 150px;
    width: 200px;
    padding-left: 40%;
    padding-top: 9%;
  }
</style>
<script setup>
import { BarcodeGeneratorComponent as EjsBarcodegenerator } from
'@syncfusion/ej2-vue-barcode-generator';
const width = "200px";
const height = "150px";
const type = "Codabar";
const value = "123456789";
const mode = "SVG";

</script>
```

**OPTIONS API (~SRC/APP.VUE)**

```

<template>
  <div id="app" class="barcodeStyle">
    <ejs-barcodegenerator
      id="barcode"
      ref="barcodeControl"
      :width="width"
      :height="height"
      :type="type"
      :value="value"
      :mode="mode"
    ></ejs-barcodegenerator>
  </div>
</template>
<style>
  .barcodeStyle {
    height: 150px;
    width: 200px;
    padding-left: 40%;
    padding-top: 9%;
  }
</style>
<script>
import { BarcodeGeneratorComponent } from '@syncfusion/ej2-vue-barcode-generator';
export default {
  components: {
    'ejs-barcodegenerator': BarcodeGeneratorComponent
  },
  name: 'app',
  data () {
    return {
      width: "200px",
      height: "150px",
      type: "Codabar",
      value: "123456789",
      mode: "SVG",
    }
  }
}
</script>

```

```
{% previewsample "page.domainurl/code-snippet/barcode/getting-started/initialize-cs1" %}
```

**Adding QR Generator control**

You can add the QR code in our barcode generator component.

**COMPOSITION API (~SRC/APP.VUE)**

```

<template>
  <div id="app" class="barcodeStyle">
    <ejs-qrcodegenerator
      id="barcode"
      ref="barcodeControl"
      :width="width"
      :height="height"
    >

```

```

        :value="value"
        :mode="mode"
      ></ejs-qrcodegenerator>
    </div>
  </template>
<style>
  .barcodeStyle {
    height: 150px;
    width: 200px;
    padding-left: 40%;
    padding-top: 9%;
  }
</style>
<script setup>
import { QRCodeGeneratorComponent as EjsQrcodegenerator } from
 '@syncfusion/ej2-vue-barcode-generator';
const width = '200px';
const height = '150px';
const mode = 'SVG';
const value = 'Syncfusion';
</script>

```

### OPTIONS API (~SRC/APP.VUE)

```

<template>
  <div id="app" class="barcodeStyle">
    <ejs-qrcodegenerator
      id="barcode"
      ref="barcodeControl"
      :width="width"
      :height="height"
      :value="value"
      :mode="mode"
    ></ejs-qrcodegenerator>
  </div>
</template>
<style>
  .barcodeStyle {
    height: 150px;
    width: 200px;
    padding-left: 40%;
    padding-top: 9%;
  }
</style>
<script>
import { QRCodeGeneratorComponent } from '@syncfusion/ej2-vue-barcode-
generator';
export default {
  components: {
    'ejs-qrcodegenerator': QRCodeGeneratorComponent
  },
  name: 'app',
  data () {
    return {
      width: "200px",
      height: "150px",
    }
  }
}

```

```

        mode: "SVG",
        value: "Syncfusion",
      }
    }
  }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/barcode/getting-started/qrcode-cs1" %}

### Adding Datamatrix Generator control

You can add the datamatrix code in our barcode generator component.

#### **COMPOSITION API (~SRC/APP.VUE)**

```

<template>
  <div id="app" class="barcodeStyle">
    <ejs-datamatrixgenerator
      id="barcode"
      ref="barcodeControl"
      :width="width"
      :height="height"
      :value="value"
      :mode="mode"
    ></ejs-datamatrixgenerator>
  </div>
</template>
<style>
  .barcodeStyle {
    height: 150px;
    width: 200px;
    padding-left: 40%;
    padding-top: 9%;
  }
</style>
<script setup>
import { DataMatrixGeneratorComponent as EjsDatamatrixgenerator } from
'@syncfusion/ej2-vue-barcode-generator';
const width = "200px";
const height = "150px";
const mode = "SVG";
const value = "Syncfusion";

</script>

```

#### **OPTIONS API (~SRC/APP.VUE)**

```

<template>
  <div id="app" class="barcodeStyle">
    <ejs-datamatrixgenerator
      id="barcode"
      ref="barcodeControl"
      :width="width"
      :height="height"
      :value="value"
      :mode="mode"
    ></ejs-datamatrixgenerator>
  </div>
</template>

```

```

    </div>
  </template>
  <style>
    .barcodeStyle {
      height: 150px;
      width: 200px;
      padding-left: 40%;
      padding-top: 9%;
    }
  </style>
  <script>
import { DataMatrixGeneratorComponent } from '@syncfusion/ej2-vue-barcode-generator';
export default {
  components: {
    'ejs-datamatrixgenerator': DataMatrixGeneratorComponent
  },
  name: 'app',
  data () {
    return {
      width: "200px",
      height: "150px",
      mode: "SVG",
      value: "Syncfusion",
    }
  }
}
  </script>

```

{% previewsample "page.domainurl/code-snippet/barcode/getting-started/datamatrix-cs1" %}

## Getting Started with Syncfusion Barcode Component in Vue 3

This section explains how to use Barcode component in Vue 3 application.

### Prerequisites

#### [System requirements for Syncfusion Vue UI components](#)

#### Creating Vue application using Vue CLI

The easiest way to create a Vue application is to use the [Vue CLI](#). Vue CLI versions higher than [4.5.0](#) are mandatory for creating applications using Vue 3. Use the following command to uninstall older versions of the Vue CLI.

```
`bash
```

```
npm uninstall vue-cli -g
```

```
,
```

Use the following commands to install the latest version of Vue CLI.

```
`bash
```

```
npm install -g @vue/cli
```

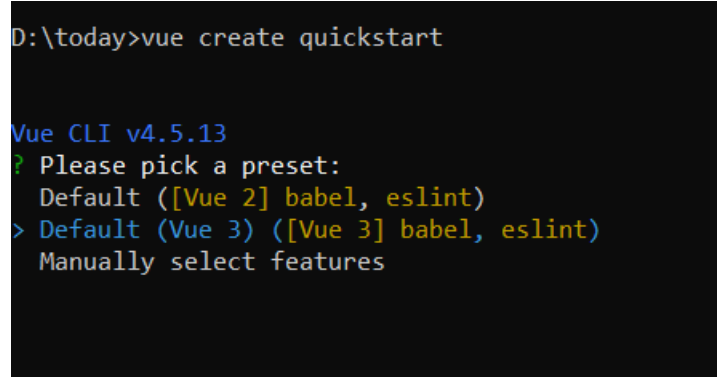

```
npm install -g @vue/cli-init
```

```
,
```

Create a new project using the following command.

```
`bash
vue create quickstart
`
```

Initiating a new project prompts us to select the type of project to be used for the current application. Select the option **Default (Vue 3)** from the menu.

```
D:\today>vue create quickstart

Vue CLI v4.5.13
? Please pick a preset:
  Default ([Vue 2] babel, eslint)
> Default (Vue 3) ([Vue 3] babel, eslint)
  Manually select features
```

#### Adding Syncfusion Barcode package in the application

Syncfusion Vue packages are maintained in the [npmjs.com](https://www.npmjs.com) registry.

In this example, the Barcode component will be used. Use the following command to install it.

```
`bash
npm install @syncfusion/ej2-vue-barcode-generator
`
```

#### Adding CSS reference for Syncfusion Vue Barcode component

Import the necessary css styles for the Barcode component along with dependency styles in the **<style>** section of the **src/App.vue** file as follows.

```
`
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-icons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-barcode-generator/styles/material.css";
</style>
`
```

#### Adding Syncfusion Vue Barcode component in the application

You have completed all of the necessary configurations required to render the Syncfusion Vue component. Now, you are going to add the Barcode component using the following steps:

1. Import the Barcode component in the `

```
,  
<script>  
import { BarcodeGeneratorComponent, QRCodeGeneratorComponent,  
DataMatrixGeneratorComponent } from '@syncfusion/ej2-vue-barcode-generator';  
</script>  
,
```

2. Register the Barcode component, which is used in this example. The following table contains a list of directives and the tag names that can be used in the Barcode component.

Directive Name	Tag Name
-----	-----
BarcodeGeneratorComponent	ejs-barcodegenerator
QRCodeGeneratorComponent	ejs-qrcodegenerator
DataMatrixGeneratorComponent	ejs-datamatrixgenerator

3. By using the following code sample, you can add the component definition in template section.

```
,  
<template>  
<div id="app" class="barcodeStyle">  
<ejs-barcodegenerator  
id="barcode"  
ref="barcodeControl"  
:width="width"  
:height="height"  
:type="type"  
:value="value"  
:mode="mode"  
:displayText="displaytext"  
  
</ejs-barcodegenerator>  
</div>  
</template>  
,
```

4. Declare the barcode generator properties in the `script` section. Here, declare the width, Height, type, value, and mode values for the `ejs-barcodegenerator` property.

```
`js
data() {
return {
width: "200px",
height: "150px",
type: "Codabar",
value: "123456789",
mode: "SVG",
displaytext: { text: 'BarcodeGenerator'}
};
}
`
```

5. Summarizing the above steps, update the `src/App.vue` file with following code.

```
`
<template>
<div id="app" class="barcodeStyle">
<ejs-barcodegenerator
id="barcode"
ref="barcodeControl"
:width="width"
:height="height"
:type="type"
:displayText="displaytext"
:value="value"
:mode="mode"

</ejs-barcodegenerator>
</div>
</template>
<script>
```

```
import {
  BarcodeGeneratorComponent,
} from "@syncfusion/ej2-vue-barcode-generator";
import "../node_modules/@syncfusion/ej2-base/styles/material.css";
import "../node_modules/@syncfusion/ej2-icons/styles/material.css";
import "../node_modules/@syncfusion/ej2-vue-barcode-generator/styles/material.css";
export default {
  name: "App",
  components: {
    "ejs-barcodegenerator": BarcodeGeneratorComponent,
  },
  data() {
    return {
      width: "200px",
      height: "150px",
      type: "Codabar",
      value: "123456789",
      mode: "SVG",
      displaytext: { text: 'BarcodeGenerator'},
    };
  },
};
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-icons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-barcode-generator/styles/material.css";
</style>
`
```

### Running the application

Run the application using the following command.

```
`bash
npm run serve
```

,

Web server will be initiated, open the quick start app in the browser at port `localhost:8080`.

#### [Adding Syncfusion Vue QR Generator control in the application](#)

You can add the QR code generator component by using the following code sample.

,

```
<template>
<div id="app" class="barcodeStyle">
<ejs-qrcodegenerator
id="qrcode"
ref="qrcodeControl"
:width="width"
:height="height"
:type="type"
:displayText="displaytext"
:value="value"
:mode="mode"

</ejs-qrcodegenerator>
</div>
</template>
<script>
import {
QRCodeGeneratorComponent,
} from "@syncfusion/ej2-vue-barcode-generator";
import "../node_modules/@syncfusion/ej2-base/styles/material.css";
import "../node_modules/@syncfusion/ej2-icons/styles/material.css";
import "../node_modules/@syncfusion/ej2-vue-barcode-generator/styles/material.css";
```

```
export default {
  name: "App",
  components: {
    "ejs-qrcodegenerator": QRCodeGeneratorComponent,
  },
  data() {
    return {
      width: "200px",
      height: "150px",
      type: "Codabar",
      value: "123456789",
      mode: "SVG",
      displaytext: { text: 'QRcodeGenerator' },
    };
  },
};
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-icons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-barcode-generator/styles/material.css";
</style>
`
```

QRcodeGenerator

[Adding Syncfusion Vue Datamatrix Generator control in the application](#)

You can add the datamatrix code generator component by using the following code sample.

`

```
<template>
<div id="app" class="barcodeStyle">
<ejs-datamatrixgenerator
id="qrcode"
ref="qrcodeControl"
:width="width"
:height="height"
:type="type"
:displayText="displaytext"
:value="value"
:mode="mode"

</ejs-datamatrixgenerator>
</div>
</template>
<script>
import {
DataMatrixGeneratorComponent,
} from "@syncfusion/ej2-vue-barcode-generator";
import "../node_modules/@syncfusion/ej2-base/styles/material.css";
import "../node_modules/@syncfusion/ej2-icons/styles/material.css";
import "../node_modules/@syncfusion/ej2-vue-barcode-generator/styles/material.css";
export default {
name: "App",
components: {
"ejs-datamatrixgenerator": DataMatrixGeneratorComponent,
},
data() {
return {
width: "200px",
height: "150px",
type: "Codabar",
value: "123456789",
```

```

mode: "SVG",
displaytext: { text: 'DataMatrix' },
};
},
};
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-icons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-barcode-generator/styles/material.css";
</style>
`

```

DataMatrix

Refer the following sample, [vue3-barcode-generator-getting-started](#).

### BarcodeGenerator in Vue Barcode component

#### Code39

The Code 39 character set includes the digits 0-9, the letters A-Z (upper case only), and the symbols: space, minus (-), plus (+), period (.), dollar sign (\$), slash (/), and percent (%). A special start / stop character is placed at the beginning and ending of each barcode. The barcode can be of any length; even more than 25 characters begin to push the bounds. Code 39 is the only type of barcode that does not require a checksum for common use.

#### APP.VUE

```

<template>
  <div id="app" class="barcodeStyle">
    <ejs-barcodegenerator
      id="barcode"
      ref="barcodeControl"
      :width="width"
      :height="height"
      :type="type"
      :value="value"
      :mode="mode"
    ></ejs-barcodegenerator>
  </div>

```

```

</template>
<style>
  .barcodeStyle {
    height: 150px;
    width: 200px;
    padding-left: 40%;
    padding-top: 9%;
  }
</style>
<script>
import Vue from 'vue';
import { BarcodeGeneratorPlugin } from '@syncfusion/ej2-vue-barcode-generator';
Vue.use(BarcodeGeneratorPlugin);
export default {
  name: 'app'
  data () {
    return {
      width: "200px",
      height: "150px",
      mode: "SVG",
      type: "Code39",
      value: "SYNCFUSION",
    }
  }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/barcode/barcodegenerator/code39-cs1" %}

### Code39 Extended

Code 39 Extended is an extended version of Code 39 that supports ASCII character set. In Code 39 Extended, you can also code 26 lower letters (a-z) and the special characters in the keyboard.

### APP.VUE

```

<template>
  <div id="app" class="barcodeStyle">
    <ejs-barcodegenerator
      id="barcode"
      ref="barcodeControl"
      :width="width"
      :height="height"
      :type="type"
      :value="value"
      :mode="mode"
    ></ejs-barcodegenerator>
  </div>
</template>
<style>
  .barcodeStyle {
    height: 150px;
    width: 200px;
    padding-left: 40%;
    padding-top: 9%;
  }

```

```

</style>
<script>
import Vue from 'vue';
import { BarcodeGeneratorPlugin } from '@syncfusion/ej2-vue-barcode-generator';
Vue.use(BarcodeGeneratorPlugin);
export default {
  name: 'app'
  data () {
    return {
      width: "200px",
      height: "150px",
      mode: "SVG",
      type: "Code39Extension",
      value: "SYNCFUSION",
    }
  }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/barcode/barcodegenerator/code39extd-cs1" %}

#### Code 11

Code 11 is used primarily for labeling the telecommunication equipment's. The character set includes the digits 0 to 9, a dash (-), and a start / stop code.

#### APP.VUE

```

<template>
  <div id="app" class="barcodeStyle">
    <ejs-barcodegenerator
      id="barcode"
      ref="barcodeControl"
      :width="width"
      :height="height"
      :type="type"
      :value="value"
      :mode="mode"
    ></ejs-barcodegenerator>
  </div>
</template>
<style>
  .barcodeStyle {
    height: 150px;
    width: 200px;
    padding-left: 40%;
    padding-top: 9%;
  }
</style>
<script>
import Vue from 'vue';
import { BarcodeGeneratorPlugin } from '@syncfusion/ej2-vue-barcode-generator';
Vue.use(BarcodeGeneratorPlugin);
export default {
  name: 'app'
}

```

```

    data () {
      return {
        width: "200px",
        height: "150px",
        mode: "SVG",
        type: "Code11",
        value: "112",
      }
    }
  }
</script>

```

{% previewsample "page.domainurl/code-snippet/barcode/barcodegenerator/code11-cs1" %}

### Codabar

Codabar is a variable length symbol that encodes the following 20 characters:

0123456789-\$/+.ABCD

The characters, A, B, C and D are used as start and stop characters. Codabar is used in libraries, blood banks, the package delivery industry and a variety of other information processing applications.

### APP.VUE

```

<template>
  <div id="app" class="barcodeStyle">
    <ejs-barcodegenerator
      id="barcode"
      ref="barcodeControl"
      :width="width"
      :height="height"
      :type="type"
      :value="value"
      :mode="mode"
    ></ejs-barcodegenerator>
  </div>
</template>
<style>
  .barcodeStyle {
    height: 150px;
    width: 200px;
    padding-left: 40%;
    padding-top: 9%;
  }
</style>
<script>
import Vue from 'vue';
import { BarcodeGeneratorPlugin } from '@syncfusion/ej2-vue-barcode-generator';
Vue.use(BarcodeGeneratorPlugin);
export default {
  name: 'app'
  data () {
    return {
      width: "200px",
      height: "150px",
      mode: "SVG",

```

```

        type: "Codabar",
        value: "123456789",
      }
    }
  }
</script>

```

{% previewsample "page.domainurl/code-snippet/barcode/barcodegenerator/codabar-cs1" %}

### Code 32

Code 32 is mainly used for coding pharmaceuticals, cosmetics and dietetics. It is often used to encode Italian Pharmacode that has the following structure:

- 'A' character (ASCII 65), that is not really encoded.
- 8 digits for Pharmacode (It generally begins with / and prefixed with 0).
- 1 digit for checksum module 10, that is automatically calculated by barcode.

The value to be encoded must be 8 digits Pharmacode (prefix it with '0' if necessary) and the 9th digit (the checksum) is automatically calculated by barcode.

### APP.VUE

```

<template>
  <div id="app" class="barcodeStyle">
    <ejs-barcodegenerator
      id="barcode"
      ref="barcodeControl"
      :width="width"
      :height="height"
      :type="type"
      :value="value"
      :mode="mode"
    ></ejs-barcodegenerator>
  </div>
</template>
<style>
  .barcodeStyle {
    height: 150px;
    width: 200px;
    padding-left: 40%;
    padding-top: 9%;
  }
</style>
<script>
import Vue from 'vue';
import { BarcodeGeneratorPlugin } from '@syncfusion/ej2-vue-barcode-generator';
Vue.use(BarcodeGeneratorPlugin);
export default {
  name: 'app'
  data () {
    return {
      width: "200px",
      height: "150px",
      mode: "SVG",
    }
  }
}

```

```

        type: "Code32",
        value: "01234567",
    }
}
}
</script>

```

{% previewsample "page.domainurl/code-snippet/barcode/barcodegenerator/code32-cs1" %}

### Code 93

Code 93 is designed to complement and improve upon Code 39. It can represent the entire ASCII character set by using combinations of 2 characters. Code 93 is a continuous, variable-length symbology and produces denser code. The Standard Mode (default implementation) can encode uppercase letters (A-Z), digits (0-9), and special characters like \*, -, \$, %, (Space), ., /, and +.

### APP.VUE

```

<template>
  <div id="app" class="barcodeStyle">
    <ejs-barcodegenerator
      id="barcode"
      ref="barcodeControl"
      :width="width"
      :height="height"
      :type="type"
      :value="value"
      :mode="mode"
    ></ejs-barcodegenerator>
  </div>
</template>
<style>
  .barcodeStyle {
    height: 150px;
    width: 200px;
    padding-left: 40%;
    padding-top: 9%;
  }
</style>
<script>
import Vue from 'vue';
import { BarcodeGeneratorPlugin } from '@syncfusion/ej2-vue-barcode-generator';
Vue.use(BarcodeGeneratorPlugin);
export default {
  name: 'app'
  data () {
    return {
      width: "200px",
      height: "150px",
      mode: "SVG",
      type: "Code93",
      value: "01234567",
    }
  }
}
</script>

```

```
{% previewsample "page.domainurl/code-snippet/barcode/barcodegenerator/code93-cs1" %}
```

### Code 93 Extended

The Code 93 Extended Barcode symbology is continuous, variable length, and self-checking. It is based on Code 93 Barcode. The Extended Version can encode all 128 ASCII characters.

### Code 128

Code 128 is a variable length, high density, alphanumeric, linear bar code symbology, capable of encoding the full 128-character ASCII character set and extended character sets. This symbology includes a checksum digit for verification and the barcode can also be verified character-by-character by verifying the parity of each data byte.

#### Code 128 Code Sets

- Code Set A (or Chars Set A) includes all of the standard upper case U.S. alphanumeric keyboard characters and punctuation characters along with the control characters, (namely, characters with ASCII values from 0 to 95 inclusive), and seven special characters.
- Code Set B (or Chars Set B) includes all of the standard upper case alphanumeric keyboard characters and punctuation characters along with the lower case alphabetic characters (namely, characters with ASCII values from 32 to 127 inclusive), and seven special characters.
- Code Set C (or Chars Set C) includes the set of 100 digit pairs from 00 to 99 inclusive along with three special characters. This allows numeric data to be encoded as two data digits per symbol character, at effectively twice the density of standard data.

#### Code 128 Special characters

The last seven characters of Code Sets A and B (character values 96 - 102) and the last three characters of Code Set C (character values 100 - 102) are special non-data characters with no ASCII character equivalents that have a particular significance to the Barcode reading device.

### APP.VUE

```
<template>
  <div id="app" class="barcodeStyle">
    <ejs-barcodegenerator
      id="barcode"
      ref="barcodeControl"
      :width="width"
      :height="height"
      :type="type"
      :value="value"
      :mode="mode"
    ></ejs-barcodegenerator>
  </div>
</template>
<style>
  .barcodeStyle {
    height: 150px;
    width: 200px;
    padding-left: 40%;
    padding-top: 9%;
  }
</style>
```

```

<script>
import Vue from 'vue';
import { BarcodeGeneratorPlugin } from '@syncfusion/ej2-vue-barcode-generator';
Vue.use(BarcodeGeneratorPlugin);
export default {
  name: 'app'
  data () {
    return {
      width: "200px",
      height: "150px",
      mode: "SVG",
      type: "Code128",
      value: "SYNCFUSION",
    }
  }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/barcode/barcodegenerator/code128-cs1" %}

### Customizing the Barcode color

A page or printed media with barcode often appears colorful in the background and surrounding region with other contents. In such cases the barcode can also be customized to suit the needs. You can achieve this by using for forecolor property .

### APP.VUE

```

<template>
  <div id="app" class="barcodeStyle">
    <ejs-barcodegenerator
      id="barcode"
      ref="barcodeControl"
      :width="width"
      :height="height"
      :type="type"
      :foreColor="foreColor"
      :value="value"
      :mode="mode"
    ></ejs-barcodegenerator>
  </div>
</template>
<style>
  .barcodeStyle {
    height: 150px;
    width: 200px;
    padding-left: 40%;
    padding-top: 9%;
  }
</style>
<script>
import Vue from 'vue';
import { BarcodeGeneratorPlugin } from '@syncfusion/ej2-vue-barcode-generator';
Vue.use(BarcodeGeneratorPlugin);
export default {

```

```

name: 'app'
data () {
  return {
    width: "200px",
    height: "150px",
    mode: "SVG",
    type: "Code128",
    value: "SYNCFUSION",
    foreColor:"red"
  }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/barcode/barcodegenerator/color-cs1" %}

### Customizing the Barcode dimension

The dimension of the barcode can be changed using the height and width property of the barcodegenerator.

### APP.VUE

```

<template>
  <div id="app" class="barcodeStyle">
    <ejs-barcodegenerator
      id="barcode"
      ref="barcodeControl"
      :width="width"
      :height="height"
      :type="type"
      :value="value"
      :mode="mode"
    ></ejs-barcodegenerator>
  </div>
</template>
<style>
  .barcodeStyle {
    height: 150px;
    width: 200px;
    padding-left: 40%;
    padding-top: 9%;
  }
</style>
<script>
import Vue from 'vue';
import { BarcodeGeneratorPlugin } from '@syncfusion/ej2-vue-barcode-generator';
Vue.use(BarcodeGeneratorPlugin);
export default {
  name: 'app'
  data () {
    return {
      width: "300px",
      height: "300px",
      mode: "SVG",
      type: "Code128",

```

```

        value: "SYNCFUSION",
    }
}
}
</script>

```

{% previewsample "page.domainurl/code-snippet/barcode/barcodegenerator/dimension-cs1" %}

### Customizing the text

In barcode generators you can customize the barcode text by using display text property .

### APP.VUE

```

<template>
  <div id="app" class="barcodeStyle" class="barcodeStyle">
    <ejs-barcodegenerator
      id="barcode"
      ref="barcodeControl"
      :width="width"
      :height="height"
      :displayText="displaytext"
      :type="type"
      :value="value"
      :mode="mode"
    ></ejs-barcodegenerator>
  </div>
</template>
<style>
  .barcodeStyle {
    height: 150px;
    width: 200px;
    padding-left: 40%;
    padding-top: 9%;
  }
</style>
<script>
import Vue from 'vue';
import { BarcodeGeneratorPlugin } from '@syncfusion/ej2-vue-barcode-generator';
Vue.use(BarcodeGeneratorPlugin);
export default {
  name: 'app'
  data () {
    return {
      width: "200px",
      height: "150px",
      displaytext: { text: 'text' },
      mode: "SVG",
      type: "Code128",
      value: "SYNCFUSION",
    }
  }
}
</script>

```

```
{% previewsample "page.domainurl/code-snippet/barcode/barcodegenerator/dimension-cs2" %}
```

## Qrcodegenerator in Vue Barcode component

### QR Code

A QR Code is a two-dimensional barcode that consists of a grid of dark and light dots or blocks that form a square. The data encoded in the barcode can be numeric, alphanumeric, or Shift Japanese Industrial Standards (JIS8) characters. The QR Code uses version from 1 to 40. Version 1 measures 21 modules x 21 modules, Version 2 measures 25 modules x 25 modules, and so on. The number of modules increases in steps of 4 modules per side up to Version 40 that measures 177 modules x 177 modules. Each version has its own capacity. By default, the barcode control automatically set the version according to the length of the input text. The QR Barcodes are designed for industrial uses and also commonly used in consumer advertising.

### APP.VUE

```
<template>
  <div id="app" class="barcodeStyle">
    <ejs-qrcodegenerator
      id="barcode"
      ref="barcodeControl"
      :width="width"
      :height="height"
      :value="value"
      :mode="mode"
    ></ejs-qrcodegenerator>
  </div>
</template>
<style>
  .barcodeStyle {
    height: 150px;
    width: 200px;
    padding-left: 40%;
    padding-top: 9%;
  }
</style>
<script>
import Vue from 'vue';
import { QRCodeGeneratorPlugin } from '@syncfusion/ej2-vue-barcode-generator';
Vue.use(QRCodeGeneratorPlugin);
export default {
  name: 'app'
  data () {
    return {
      width: "200px",
      height: "150px",
      mode: "SVG",
      value: "Syncfusion",
    }
  }
}
</script>
```

```
{% previewsample "page.domainurl/code-snippet/barcode/qrcode/qrcode-cs1" %}
```

### Customizing the Barcode color

A page or printed media with barcode often appears colorful in the background and surrounding region with other contents. In such cases the barcode can also be customized to suit the needs. You can achieve this by using for forecolor property .

#### APP.VUE

```
<template>
  <div id="app" class="barcodeStyle">
    <ejs-qrcodegenerator
      id="barcode"
      ref="barcodeControl"
      :width="width"
      :height="height"
      :foreColor="foreColor"
      :value="value"
      :mode="mode"
    ></ejs-qrcodegenerator>
  </div>
</template>
<style>
  .barcodeStyle {
    height: 150px;

## Datamatrixgenerator in Vue Barcode component

### Data Matrix

DataMatrix Barcode is a two dimensional barcode that consists of a grid of dark and light dots or blocks forming square or rectangular symbol. The data encoded in the barcode can either be numbers or alphanumeric. They are widely used in printed media such as labels and letters. You can read it easily with the help of a barcode reader and mobile phones.

### APP.VUE

```

<template>
  <div id="app" class="barcodeStyle">
    <ejs-datamatrixgenerator
      id="barcode"
      ref="barcodeControl"
      :width="width"
      :height="height"
      :value="value"
      :mode="mode"
    ></ejs-datamatrixgenerator>
  </div>
</template>
<style>
  .barcodeStyle {
    height: 150px;
    width: 200px;
  }
</style>

```

```

        padding-left: 40%;
        padding-top: 9%;
    }
</style>
<script>
import Vue from 'vue';
import { DataMatrixGeneratorPlugin } from '@syncfusion/ej2-vue-barcode-generator';
Vue.use(DataMatrixGeneratorPlugin);
export default {
    name: 'app'
    data () {
        return {
            width: "200px",
            height: "150px",
            mode: "SVG",
            value: "Syncfusion",
        }
    }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/barcode/datamatrix/datamatrix-cs1" %}

### Customizing the Barcode color

A page or printed media with barcode often appears colorful in the background and surrounding region with other contents. In such cases the barcode can also be customized to suit the needs. You can achieve this by using the forecolor property .

### APP.VUE

```

<template>

    return {
      width: "200px",
      height: "150px",
      mode: "SVG",
      foreColor:"red"
      value: "Syncfusion",
    }
  }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/barcode/datamatrix/color-cs1" %}

### Customizing the Barcode dimension

The dimension of the barcode can be changed using the height and width property of the barcodegenerator.

#### APP.VUE

```

<template>
  <div id="app" class="barcodeStyle">
    <ejs-datamatrixgenerator
      id="barcode"
      ref="barcodeControl"
      :width="width"
      :height="height"
      :value="value"
      :mode="mode"
    ></ejs-datamatrixgenerator>
  </div>
</template>
<style>
  .barcodeStyle {
    height: 150px;
    width: 200px;
    padding-left: 40%;
    padding-top: 9%;
  }
</style>
<script>
import Vue from 'vue';
import { DataMatrixGeneratorPlugin } from '@syncfusion/ej2-vue-barcode-generator';
Vue.use(DataMatrixGeneratorPlugin);
export default {
  name: 'app'
  data () {
    return {
      width: "300px",
      height: "300px",
      mode: "SVG",
      foreColor:"red"
    }
  }
}

```

```

        value: "Syncfusion",
      }
    }
  }
</script>

```

{% previewsample "page.domainurl/code-snippet/barcode/datamatrix/dimension-cs1" %}

### Customizing the text

In barcode generators you can customize the barcode text by using the display text property .

#### APP.VUE

```

<template>
  <div id="app" class="barcodeStyle">
    <ejs-datamatrixgenerator
      id="barcode"
      ref="barcodeControl"
      :width="width"
      :height="height"
      :displayText="displayText"
      :value="value"
      :mode="mode"
    ></ejs-datamatrixgenerator>
  </div>
</template>
<style>
  .barcodeStyle {
    height: 150px;
    width: 200px;
    padding-left: 40%;
    padding-top: 9%;
  }
</style>
<script>
import Vue from 'vue';
import { DataMatrixGeneratorPlugin } from '@syncfusion/ej2-vue-barcode-generator';
Vue.use(DataMatrixGeneratorPlugin);
export default {
  name: 'app'
  data () {
    return {
      width: "200px",
      height: "150px",
      displaytext: { text: 'text' },
      mode: "SVG",
      foreColor:"red"
      value: "Syncfusion",
    }
  }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/barcode/datamatrix/text-cs1" %}

### Export in Vue Barcode component

Export barcode as an image and base64 string is common for barcode,QRcode and datamatrix. The following code samples explain how to export the barcode as an image

and base64 string.

#### Export

Barcode provides the support to export its content as an image in the specified image type and downloads it in the browser.

The following code example shows how to export the barcode as an image

```
`javascript
export default {
  name: 'app',
  data () {
    return {
      width: "200px",
      height: "150px",
      mode: "SVG",
      type: "Code39",
      value: "SYNCFUSION",
    }
  }
  mounted: function() {
    let barcodeInstance;
    let barcodeObj = document.getElementById("barcode");
    barcodeInstance = barcodeObj.ej2_instances[0];
    let filename = 'Export';
    barcodeInstance.exportImage(filename,'JPG');
  }
}
```

The filename specifies the name of the file to be downloaded.

#### Export As Base64String

Barcode provides the support to export its content as an image in the specified image type and returns it as base64 string.

The following code example shows how to export the barcode as a base64 string

```
`javascript
```

```
export default {
  name: 'app',
  data () {
    return {
      width: "200px",
      height: "150px",
      mode: "SVG",
      type: "Code39",
      value: "SYNCFUSION",
      image: function(event) {
        let barcodeInstance;
        let barcodeObj = document.getElementById("barcode");
        barcodeInstance = barcodeObj.ej2_instances[0];
        setTimeout(() => {
          base64string();
        }, 100);
        console.log(barcodeInstance.exportAsBase64Image('JPG'))
      }
    }
  },
  async function base64string(){
    let barcodeInstance;
    let barcodeObj = document.getElementById("barcode");
    barcodeInstance = barcodeObj.ej2_instances[0];
    let base64 = await barcodeInstance.exportAsBase64Image('JPG');
    console.log(base64);
  },
  ,
}
```

**Note:**

Format is to specify the type or format of the exported file. You can export the barcode to the following formats:

\* JPG.

\* PNG.

## Breadcrumb

### Getting Started with the Vue Breadcrumb Component in Vue 2

This article provides a step-by-step guide for setting up a Vue 2 project using [Vue-CLI](#) and integrating the Syncfusion Vue Breadcrumb component

#### Prerequisites

[System requirements for Syncfusion Vue UI components](#)

#### Dependencies

The following list of dependencies are required to use the Breadcrumb component in your application.

```
`js
|-- @syncfusion/ej2-vue-navigations
|-- @syncfusion/ej2-vue-base
|-- @syncfusion/ej2-navigations
|-- @syncfusion/ej2-base
|-- @syncfusion/ej2-data
|-- @syncfusion/ej2-lists
|-- @syncfusion/ej2-inputs
|-- @syncfusion/ej2-popups
|-- @syncfusion/ej2-buttons
`
```

#### Setting up the Vue 2 project

To generate a Vue 2 project using Vue-CLI, use the [vue create](#) command. Follow these steps to install Vue CLI and create a new project:

```
`bash
npm install -g @vue/cli
vue create quickstart
cd quickstart
npm run serve
`
```

or

```
`bash
yarn global add @vue/cli
vue create quickstart
cd quickstart
```

```
yarn run serve
```

When creating a new project, choose the option `Default ([Vue 2] babel, eslint)` from the menu.

```
E:\samples>vue create quickstart

Vue CLI v5.0.8
? Please pick a preset:
  Default ([Vue 3] babel, eslint)
> Default ([Vue 2] babel, eslint)
  Manually select features
```

Once the `quickstart` project is set up with default settings, proceed to add Syncfusion components to the project.

### Add Syncfusion Vue packages

Syncfusion packages are available at [npmjs.com](https://www.npmjs.com). To use Vue components, install the required npm package.

This article uses the [Vue Breadcrumb component](#) as an example. Install the `@syncfusion/ej2-vue-navigations` package by running the following command:

```
`bash
```

```
npm install @syncfusion/ej2-vue-navigations --save
```

or

```
`bash
```

```
yarn add @syncfusion/ej2-vue-navigations
```

### Add Syncfusion Vue component

Follow the below steps to add the Vue Breadcrumb component:

1\. First, import and register the Breadcrumb component in the `script` section of the `src/App.vue` file.

#### ~/SRC/APP.VUE

```
<script>
import { BreadcrumbComponent } from "@syncfusion/ej2-vue-navigations";
export default {
  components:{
    'ejs-breadcrumb': BreadcrumbComponent
  }
}
</script>
```

2\. In the `template` section, define the Breadcrumb component with the [enableNavigation](#) property.

~/SRC/APP.VUE

```
<template>
<div>
<ejs-breadcrumb :enableNavigation='false'></ejs-breadcrumb>
</div>
</template>
```

Here is the summarized code for the above steps in the **src/App.vue** file:

~/SRC/APP.VUE

```
<template>
<div>
<ejs-breadcrumb :enableNavigation='false'></ejs-breadcrumb>
</div>
</template>
<script>
import { BreadcrumbComponent } from "@syncfusion/ej2-vue-navigations";
export default {
  components:{
    'ejs-breadcrumb': BreadcrumbComponent
  },
  data: function() {
    return {};
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
body {
  margin-top: 100px;
  text-align: center;
}
</style>
```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run serve
```

```
,
```

or

```
`bash
```

```
yarn run serve
```

```
,
```

```
{% previewsample "page.domainurl/code-snippet/breadcrumb/getting-started-cs5" %}
```

### Add Items to the Breadcrumb Component

Use `items` property to bind items for Breadcrumb component. The below example demonstrates the basic rendering of Breadcrumb with items support.

#### ~/SRC/APP.VUE

```
<template>
<div>
<ejs-breadcrumb :enableNavigation='false'>
  <e-breadcrumb-items>
    <e-breadcrumb-item iconCss= 'e-icons e-home' url=
'https://ej2.syncfusion.com/vue/demos/'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Components' url=
'https://ej2.syncfusion.com/vue/demos/datagrid/overview'></e-breadcrumb-
item>
    <e-breadcrumb-item text= 'Navigations' url=
'https://ej2.syncfusion.com/vue/demos/menu/default'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Breadcrumb' url=
'https://ej2.syncfusion.com/vue/demos/breadcrumb/default'></e-breadcrumb-
item>
  </e-breadcrumb-items>
</ejs-breadcrumb>
</div>
</template>
<script>
import { BreadcrumbComponent, BreadcrumbItemDirective,
BreadcrumbItemsDirective } from "@syncfusion/ej2-vue-navigations";
export default {
  components: {
    'ejs-breadcrumb': BreadcrumbComponent,
    'e-breadcrumb-item': BreadcrumbItemDirective,
    'e-breadcrumb-items': BreadcrumbItemsDirective
  },
  data: function() {
    return {};
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
body {
  margin-top: 100px;
  text-align: center;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/breadcrumb/getting-started-cs6" %}

### Enable or Disable Navigation

This feature enables or disables the item navigation. By default, the navigation will be enabled when setting `Url` property. To prevent breadcrumb item navigation, set `enableNavigation` property as false in Breadcrumb. The below example shows enabling and disabling the navigation of Breadcrumb items.

#### ~/SRC/APP.VUE

```

<template>
<div>
  <div id="breadcrumb-control">
    <div class="header"><b>Enable Navigation- false</b></div><br />
    <ejs-breadcrumb :enableNavigation='false'>
      <e-breadcrumb-items>
        <e-breadcrumb-item iconCss= 'e-icons e-home' url=
'https://ej2.syncfusion.com/vue/demos/'></e-breadcrumb-item>
        <e-breadcrumb-item text= 'Components' url=
'https://ej2.syncfusion.com/vue/demos/datagrid/overview'></e-breadcrumb-
item>
        <e-breadcrumb-item text= 'Navigations' url=
'https://ej2.syncfusion.com/vue/demos/menu/default'></e-breadcrumb-item>
        <e-breadcrumb-item text= 'Breadcrumb' url=
'https://ej2.syncfusion.com/vue/demos/breadcrumb/default'></e-breadcrumb-
item>
      </e-breadcrumb-items>
    </ejs-breadcrumb>
    <br />
    <br/>
    <div class="header"><b>Enable Navigation- true</b></div><br />
    <ejs-breadcrumb :enableNavigation='true'>
      <e-breadcrumb-items>
        <e-breadcrumb-item iconCss= 'e-icons e-home' url=
'https://ej2.syncfusion.com/vue/demos/'></e-breadcrumb-item>
        <e-breadcrumb-item text= 'Components' url=
'https://ej2.syncfusion.com/vue/demos/datagrid/overview'></e-breadcrumb-
item>
        <e-breadcrumb-item text= 'Navigations' url=
'https://ej2.syncfusion.com/vue/demos/menu/default'></e-breadcrumb-item>
        <e-breadcrumb-item text= 'Breadcrumb' url=
'https://ej2.syncfusion.com/vue/demos/breadcrumb/default'></e-breadcrumb-
item>
      </e-breadcrumb-items>
    </ejs-breadcrumb>
  </div>
</div>
</template>
<script>
import { BreadcrumbComponent, BreadcrumbItemDirective,
BreadcrumbItemsDirective } from "@syncfusion/ej2-vue-navigations";
export default {
  components: {
    'ejs-breadcrumb': BreadcrumbComponent,
    'e-breadcrumb-item': BreadcrumbItemDirective,
    'e-breadcrumb-items': BreadcrumbItemsDirective
  },
  data: function() {
    return {};
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
body {
  margin-top: 100px;

```

```
    text-align: center;
  }
  #breadcrumb-control {
    margin-left: auto;
    margin-right: auto;
    width: 60%;
  }
  #breadcrumb-control .header {
    text-align: left;
    padding-left: 10px;
  }
  #breadcrumb-control .e-control.e-breadcrumb {
    text-align: left;
  }
</style>
```

{% previewsample "page.domainurl/code-snippet/breadcrumb/getting-started-cs7" %}

## Getting Started with the Vue Breadcrumb Component in Vue 3

This article provides a step-by-step guide for setting up a [Vite](#) project with a JavaScript environment and integrating the Syncfusion Vue Breadcrumb component using the [Composition API](#) / [Options API](#).

The **Composition API** is a new feature introduced in Vue.js 3 that provides an alternative way to organize and reuse component logic. It allows developers to write components as functions that use smaller, reusable functions called composition functions to manage their properties and behavior.

The **Options API** is the traditional way of writing Vue.js components, where the component logic is organized into a series of options that define the component's properties and behavior. These options include data, methods, computed properties, watchers, lifecycle hooks, and more.

### Prerequisites

#### [System requirements for Syncfusion Vue UI components](#)

#### Set up the Vite project

A recommended approach for beginning with Vue is to scaffold a project using [Vite](#). To create a new Vite project, use one of the commands that are specific to either NPM or Yarn.

```
`bash
```

```
npm create vite@latest
```

```
`
```

or

```
`bash
```

```
yarn create vite
```

```
`
```

Using one of the above commands will lead you to set up additional configurations for the project as below:

1. Define the project name: We can specify the name of the project directly. Let's specify the name of the project as **my-project** for this article.

```
`bash
```

```
? Project name: » my-project
```

```
,
```

2. Select **Vue** as the framework. It will create a Vue 3 project.

```
`bash
```

```
? Select a framework: » - Use arrow-keys. Return to submit.
```

```
Vanilla
```

```
Vue
```

```
React
```

```
Preact
```

```
Lit
```

```
Svelte
```

```
Others
```

```
,
```

3. Choose **JavaScript** as the framework variant to build this Vite project using JavaScript and Vue.

```
`bash
```

```
? Select a variant: » - Use arrow-keys. Return to submit.
```

```
JavaScript
```

```
TypeScript
```

```
Customize with create-vue ↗
```

```
Nuxt ↗
```

```
,
```

4. Upon completing the aforementioned steps to create the **my-project**, run the following command to install its dependencies:

```
`bash
```

```
cd my-project
```

```
npm install
```

```
,
```

```
or
```

```
`bash
```

```
cd my-project
```

```
yarn install
```

```
,
```

Now that `my-project` is ready to run with default settings, let's add Syncfusion components to the project.

### Add Syncfusion Vue packages

Syncfusion Vue component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion Vue components in the project, install the corresponding npm package.

This article uses the [Vue Breadcrumb component](#) as an example. To use the Vue Breadcrumb component in the project, the `@syncfusion/ej2-vue-navigations` package needs to be installed using the following command:

```
`bash
```

```
npm install @syncfusion/ej2-vue-navigations --save
```

```
`
```

or

```
`bash
```

```
yarn add @syncfusion/ej2-vue-navigations
```

```
`
```

### Import Syncfusion CSS styles

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, [CRG](#) and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to themes in a Vue project.

In this article, `Material` theme is applied using CSS styles, which are available in installed packages. The necessary `Material` CSS styles for the Breadcrumb component and its dependents were imported into the `<style>` section of `src/App.vue` file.

#### ~/SRC/APP.VUE

```
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
</style>
```

The order of importing CSS styles should be in line with its dependency graph.

### Add Syncfusion Vue component

Follow the below steps to add the Vue Breadcrumb component using `Composition API` or `Options API`:

1.First, import and register the Breadcrumb component and its child directives in the `script` section of the `src/App.vue` file. If you are using the `Composition API`, you should add the `setup` attribute to the `script` tag to indicate that Vue will be using the `Composition API`.

#### COMPOSITION API (~/SRC/APP.VUE)

```
<script setup>
import { BreadcrumbComponent as EjsBreadcrumb } from "@syncfusion/ej2-vue-navigations";
</script>
```

**OPTIONS API (~SRC/APP.VUE)**

```
<script>
import { BreadcrumbComponent } from "@syncfusion/ej2-vue-navigations";
//Component registration
export default {
  name: "App",
  components: {
    'ejs-breadcrumb': BreadcrumbComponent
  }
}
</script>
```

2. In the **template** section, define the Breadcrumb component with the [enableRtl](#) property and item definitions.

**~/SRC/APP.VUE**

```
<template>
<div>
<ejs-breadcrumb :enableRtl='enableRtl'>
<e-breadcrumb-items>
<e-breadcrumb-item iconCss= 'e-icons e-home' url=
'https://ej2.syncfusion.com/vue/demos/'></e-breadcrumb-item>
<e-breadcrumb-item text= 'Components' url=
'https://ej2.syncfusion.com/vue/demos/datagrid/overview'></e-breadcrumb-
item>
<e-breadcrumb-item text= 'Navigations' url=
'https://ej2.syncfusion.com/vue/demos/menu/default'></e-breadcrumb-item>
<e-breadcrumb-item text= 'Breadcrumb' url=
'https://ej2.syncfusion.com/vue/demos/breadcrumb/default'></e-breadcrumb-
item>
</e-breadcrumb-items>
</ejs-breadcrumb>
</div>
</template>
```

3. Declare the values for the **enableNavigation** property in the **script** section.

**COMPOSITION API (~SRC/APP.VUE)**

```
<script setup>
const enableRtl = 'true';
</script>
```

**OPTIONS API (~SRC/APP.VUE)**

```
<script>
data() {
  return {
    enableRtl: 'true',
  };
}
</script>
```

Here is the summarized code for the above steps in the **src/App.vue** file:

### **COMPOSITION API (~SRC/APP.VUE)**

```
<template>
<div>
<ejs-breadcrumb :enableRtl='enableRtl'>
<e-breadcrumb-items>
<e-breadcrumb-item iconCss= 'e-icons e-home' url=
'https://ej2.syncfusion.com/vue/demos/'></e-breadcrumb-item>
<e-breadcrumb-item text= 'Components' url=
'https://ej2.syncfusion.com/vue/demos/datagrid/overview'></e-breadcrumb-
item>
<e-breadcrumb-item text= 'Navigations' url=
'https://ej2.syncfusion.com/vue/demos/menu/default'></e-breadcrumb-item>
<e-breadcrumb-item text= 'Breadcrumb' url=
'https://ej2.syncfusion.com/vue/demos/breadcrumb/default'></e-breadcrumb-
item>
</e-breadcrumb-items>
</ejs-breadcrumb>
</div>
</template>
<script setup>
import { BreadcrumbComponent as EjsBreadcrumb, ItemsDirective as
EBreadcrumbItems, ItemDirective as EBreadcrumbItem } from "@syncfusion/ej2-
vue-navigations";
const enableRtl='true'
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
</style>
```

### **OPTIONS API (~SRC/APP.VUE)**

```
<template>
<div>
<ejs-breadcrumb :enableRtl='enableRtl'>
<e-breadcrumb-items>
<e-breadcrumb-item iconCss= 'e-icons e-home' url=
'https://ej2.syncfusion.com/vue/demos/'></e-breadcrumb-item>
<e-breadcrumb-item text= 'Components' url=
'https://ej2.syncfusion.com/vue/demos/datagrid/overview'></e-breadcrumb-
item>
<e-breadcrumb-item text= 'Navigations' url=
'https://ej2.syncfusion.com/vue/demos/menu/default'></e-breadcrumb-item>
<e-breadcrumb-item text= 'Breadcrumb' url=
'https://ej2.syncfusion.com/vue/demos/breadcrumb/default'></e-breadcrumb-
item>
</e-breadcrumb-items>
</ejs-breadcrumb>
</div>
</template>
<script>
import { BreadcrumbComponent, ItemsDirective, ItemDirective } from
"@syncfusion/ej2-vue-navigations";
// Component registration
```

```
export default {
  name: "App",
  // Declaring component and its directives
  components: {
    'ejs-breadcrumb': BreadcrumbComponent,
    'e-breadcrumb-items': ItemsDirective,
    'e-breadcrumb-item': ItemDirective
  },
  // Bound properties declarations
  data() {
    return {
      enableRtl: 'true',
    };
  }
};
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
</style>
```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run dev
```

```
,
```

or

```
`bash
```

```
yarn run dev
```

```
,
```

The output will appear as follows:

**Breadcrumb** / Navigations / Components / 

For migrating from Vue 2 to Vue 3, refer to the [migration](#) documentation.

## Data binding in Vue Breadcrumb component

### Items as tag directive

The React Breadcrumb contains `<e-breadcrumb-items>` and `<e-breadcrumb-item>` tags to render items for the component. To bind items, use `<e-breadcrumb-items>` tag and `<e-breadcrumb-item>` tag to bind properties for breadcrumb items.

#### APP.VUE

```
<template>
<div>
<ejs-breadcrumb :enableNavigation='false'>
  <e-breadcrumb-items>
    <e-breadcrumb-item iconCss= 'e-icons e-home' url=
'https://ej2.syncfusion.com/vue/demos/'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Components' url=
'https://ej2.syncfusion.com/vue/demos/datagrid/overview'></e-breadcrumb-
item>
    <e-breadcrumb-item text= 'Navigations' url=
'https://ej2.syncfusion.com/vue/demos/menu/default'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Breadcrumb' url=
'https://ej2.syncfusion.com/vue/demos/breadcrumb/default'></e-breadcrumb-
item>
  </e-breadcrumb-items>
</ejs-breadcrumb>
</div>
</template>
<script>
import Vue from 'vue';
import { BreadcrumbPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(BreadcrumbPlugin);
export default {
  data: function() {
    return {};
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
body {
  margin-top: 100px;
  text-align: center;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/breadcrumb/getting-started-cs1" %}

### Items based on current URL

The breadcrumb items can be generated from the current URL of the page, if the [url](#) property is not provided or when the user does not specify the breadcrumb items using the `<e-breadcrumb-item>` tag. The following example shows the breadcrumb items that are generated based on the current URL.

#### APP.VUE

```
<template>
```

```

<div>
<ejs-breadcrumb :enableNavigation='false'></ejs-breadcrumb>
</div>
</template>
<script>
import Vue from 'vue';
import { BreadcrumbPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(BreadcrumbPlugin);
export default {
  data: function() {
    return {};
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
body {
  margin-top: 100px;
  text-align: center;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/breadcrumb/getting-started-cs2" %}

This sample is hosted in different location, so the Breadcrumb Component is rendered with different location instead of the actual location.

### Static URL

The breadcrumb items can be generated by providing the [url](#) property in the component, if the user does not specify the breadcrumb items using the `<e-breadcrumb-item>` tag. The following example shows the breadcrumb items generated from the provided url in the component.

### APP.VUE

```

<template>
<div>
<ejs-breadcrumb :enableNavigation='false'
url="https://ej2.syncfusion.com/demos/breadcrumb/bind-to-location"></ejs-
breadcrumb>
</div>
</template>
<script>
import Vue from 'vue';
import { BreadcrumbPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(BreadcrumbPlugin);
export default {
  data: function() {
    return {};
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
body {

```

```
margin-top: 100px;
text-align: center;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/breadcrumb/getting-started-cs3" %}

### Customize text when generated items using Url

The breadcrumb items text can be customized by using the [beforeItemRender](#) event. In the following example, **bind-to-location** text was customized as **location**.

#### APP.VUE

```
<template>
<div>
<ejs-breadcrumb :enableNavigation='false'
url="https://ej2.syncfusion.com/demos/breadcrumb/bind-to-location"
:beforeItemRender="beforeItemRenderHandler">
</ejs-breadcrumb>
</div>
</template>
<script>
import Vue from 'vue';
import { BreadcrumbPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(BreadcrumbPlugin);
export default {
  data: function() {
    return {};
  },
  methods: {
    beforeItemRenderHandler: function(args) {
      if (args.item.text === 'bind-to-location') {
        args.item.text = 'location';
      }
    }
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
body {
  margin-top: 100px;
  text-align: center;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/breadcrumb/getting-started-cs4" %}

### Icons in Vue Breadcrumb component

#### Loading Icons in Breadcrumb Item

To load the icon on the breadcrumb item, set the [iconCss](#) property.

*Breadcrumb with font icons*

To place the font icon on the breadcrumb item, set the `iconCss` property to `e-icons` with the required icon CSS. By default, the icon is positioned to the left side of the item.

**APP.VUE**

```
<template>
<div>
<ejs-breadcrumb :enableNavigation='false'>
  <e-breadcrumb-items>
    <e-breadcrumb-item iconCss= 'e-icons e-home' url=
'https://ej2.syncfusion.com/vue/demos/'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Components' url=
'https://ej2.syncfusion.com/vue/demos/datagrid/overview'></e-breadcrumb-
item>
    <e-breadcrumb-item text= 'Navigations' url=
'https://ej2.syncfusion.com/vue/demos/menu/default'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Breadcrumb' url=
'https://ej2.syncfusion.com/vue/demos/breadcrumb/default'></e-breadcrumb-
item>
  </e-breadcrumb-items>
</ejs-breadcrumb>
</div>
</template>
<script>
import Vue from 'vue';
import { BreadcrumbPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(BreadcrumbPlugin);
export default {
  data: function() {
    return {};
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
body {
  margin-top: 100px;
  text-align: center;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/breadcrumb/getting-started-cs8" %}

*Breadcrumb with Image*

In the Breadcrumb component, images can be added for the items using the `iconCss` property. In the following example, an image was added to the breadcrumb item by using the iconCss class `e-image-home` and specifying height and width.

**APP.VUE**

```
<template>
<div>
<ejs-breadcrumb :enableNavigation='false'>
  <e-breadcrumb-items>
```

```

    <e-breadcrumb-item iconCss= 'e-image-home' url=
'https://ej2.syncfusion.com/vue/demos/'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Components' url=
'https://ej2.syncfusion.com/vue/demos/datagrid/overview'></e-breadcrumb-
item>
    <e-breadcrumb-item text= 'Navigations' url=
'https://ej2.syncfusion.com/vue/demos/menu/default'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Breadcrumb' url=
'https://ej2.syncfusion.com/vue/demos/breadcrumb/default'></e-breadcrumb-
item>
  </e-breadcrumb-items>
</ejs-breadcrumb>
</div>
</template>
<script>
import Vue from 'vue';
import { BreadcrumbPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(BreadcrumbPlugin);
export default {
  data: function() {
    return {};
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
body {
  margin-top: 100px;
  text-align: center;
}
.e-image-home {
  background-image: url('home.png');
  height: 20px;
  width: 20px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/breadcrumb/getting-started-cs9" %}

### Breadcrumb with SVG Image

In the Breadcrumb component, SVG image can be added for the items using the [iconCss](#) property. In the following example, SVG image was added to the breadcrumb item by using the iconCss class `e-svg-home` and specifying height and width.

### APP.VUE

```

<template>
<div>
<ejs-breadcrumb :enableNavigation='false'>
  <e-breadcrumb-items>
    <e-breadcrumb-item iconCss= 'e-svg-home' url=
'https://ej2.syncfusion.com/vue/demos/'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Components' url=
'https://ej2.syncfusion.com/vue/demos/datagrid/overview'></e-breadcrumb-
item>

```

```

    <e-breadcrumb-item text= 'Navigations' url=
'https://ej2.syncfusion.com/vue/demos/menu/default'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Breadcrumb' url=
'https://ej2.syncfusion.com/vue/demos/breadcrumb/default'></e-breadcrumb-
item>
  </e-breadcrumb-items>
</ejs-breadcrumb>
</div>
</template>
<script>
import Vue from 'vue';
import { BreadcrumbPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(BreadcrumbPlugin);
export default {
  data: function() {
    return {};
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
body {
  margin-top: 100px;
  text-align: center;
}
.e-svg-home {
  background-image: url('home.svg');
  height: 20px;
  width: 20px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/breadcrumb/getting-started-cs10" %}

### Icon Position

By default, the icon is positioned to the left side of the item in the Breadcrumb component. If you need to add the icon right to the breadcrumb item, add the `e-icon-right` class to the required item. In the following example, the `e-icon-right` class was added to the breadcrumb items using the [beforeItemRender](#) event.

### APP.VUE

```

<template>
<div id="breadcrumb-control">
<div class='header'><b>IconPosition- left</b></div><br />
<ejs-breadcrumb>
  <e-breadcrumb-items>
    <e-breadcrumb-item text="Program Files" iconCss="e-bicons e-folder"></e-
breadcrumb-item>
    <e-breadcrumb-item text="Services" iconCss="e-bicons e-folder"></e-
breadcrumb-item>
    <e-breadcrumb-item text="Config.json" iconCss="e-bicons e-file"></e-
breadcrumb-item>
  </e-breadcrumb-items>
</ejs-breadcrumb>

```

```

<br />
<br/>
<div class='header'><b>IconPosition- Right</b></div><br />
<ejs-breadcrumb :beforeItemRender="beforeItemRenderHandler">
  <e-breadcrumb-items >
    <e-breadcrumb-item text="Program Files" iconCss="e-bicons e-folder"></e-
breadcrumb-item>
    <e-breadcrumb-item text="Services" iconCss="e-bicons e-folder"></e-
breadcrumb-item>
    <e-breadcrumb-item text="Config.json" iconCss="e-bicons e-file"></e-
breadcrumb-item>
  </e-breadcrumb-items>
</ejs-breadcrumb>
</div>
</template>
<script>
import Vue from 'vue';
import { BreadcrumbPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(BreadcrumbPlugin);
export default {
  data: function() {
    return {};
  },
  methods: {
    beforeItemRenderHandler: function(args) {
      if (args.element) {
        args.element.classList.add('e-icon-right');
      }
    }
  }
}
</script>
<style>

### Show icon only for first item

To show icon only for the first item in the Breadcrumb component, add icons to the first item using the [iconCss](#) property. In the following example, the icon was provided only for the first item by setting the [iconCss](#) property.

### APP.VUE

```

<template>
<div>
<ejs-breadcrumb :enableNavigation='false'>
  <e-breadcrumb-items>
    <e-breadcrumb-item iconCss= 'e-icons e-home' url=
'https://ej2.syncfusion.com/vue/demos/'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Components' url=
'https://ej2.syncfusion.com/vue/demos/datagrid/overview'></e-breadcrumb-
item>
    <e-breadcrumb-item text= 'Navigations' url=
'https://ej2.syncfusion.com/vue/demos/menu/default'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Breadcrumb' url=
'https://ej2.syncfusion.com/vue/demos/breadcrumb/default'></e-breadcrumb-
item>
  </e-breadcrumb-items>
</ejs-breadcrumb>
</div>
</template>

```

```

<script>
import Vue from 'vue';
import { BreadcrumbPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(BreadcrumbPlugin);
export default {
  data: function() {
    return {};
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
body {
  margin-top: 100px;
  text-align: center;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/breadcrumb/getting-started-cs13" %}

## Navigation in Vue Breadcrumb component

The breadcrumb item navigates to the path while clicking the item. To enable navigation, [url](#) property was bound to the items.

### URL

In the Breadcrumb component, the item represents the url. The breadcrumb items can be provided with either relative or absolute URL.

### Relative URL

The breadcrumb items with relative URL contain only the path but do not locate the path or server. The following example represents the breadcrumb items with relative url.

### APP.VUE

```

<template>
<div>
<ejs-breadcrumb :enableNavigation='false'>
  <e-breadcrumb-items>
    <e-breadcrumb-item text= 'Home' url= './breadcrumb'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Breadcrumb' url= './breadcrumb'></e-
breadcrumb-item>
    <e-breadcrumb-item text= 'Default' url= './breadcrumb/default'></e-
breadcrumb-item>
    <e-breadcrumb-item text= 'Icons' url= './breadcrumb/icons'></e-
breadcrumb-item>
    <e-breadcrumb-item text= 'Navigations' url=
'./breadcrumb/navigations'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Overflow' url= './breadcrumb/overflow'></e-
breadcrumb-item>
  </e-breadcrumb-items>
</ejs-breadcrumb>
</div>
</template>
<script>
import Vue from 'vue';

```

```
import { BreadcrumbPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(BreadcrumbPlugin);
export default {
  data: function() {
    return {};
  }
}
</script>
<style>

### Absolute URL

The breadcrumb items with Absolute URL contain the path and locate to the resource if the absolute url is bound to the breadcrumb item. The following example represents the breadcrumb items with absolute url.

### APP.VUE

```
<template>
<div>
<ejs-breadcrumb :enableNavigation='false'>
  <e-breadcrumb-items>
    <e-breadcrumb-item text= 'Home' url=
'https://ej2.syncfusion.com/documentation/breadcrumb/introduction'></e-
breadcrumb-item>
    <e-breadcrumb-item text= 'Getting' url=
'https://ej2.syncfusion.com/documentation/breadcrumb/getting-started'></e-
breadcrumb-item>
    <e-breadcrumb-item text= 'Icons' url=
'https://ej2.syncfusion.com/documentation/breadcrumb/icons'></e-breadcrumb-
item>
    <e-breadcrumb-item text= 'Navigation' url=
'https://ej2.syncfusion.com/documentation/breadcrumb/navigation'></e-
breadcrumb-item>
    <e-breadcrumb-item text= 'Overflow' url=
'https://ej2.syncfusion.com/documentation/breadcrumb/overflow'></e-
breadcrumb-item>
  </e-breadcrumb-items>
</ejs-breadcrumb>
</div>
</template>
<script>
import Vue from 'vue';
import { BreadcrumbPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(BreadcrumbPlugin);
export default {
  data: function() {
    return {};
  }
}
```

```

    }
  }
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
body {
    margin-top: 100px;
    text-align: center;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/breadcrumb/getting-started-cs15" %}

### Enable navigation for last Breadcrumb item

The feature enables the last item of the Breadcrumb component by setting the [enableActiveItemNavigation](#) property to true. In the following example, the last item of the Breadcrumb was enabled.

### APP.VUE

```

<template>
<div>
<ejs-breadcrumb :enableNavigation='false' enableActiveItemNavigation='true'>
  <e-breadcrumb-items>
    <e-breadcrumb-item text= 'Home' url=
'https://ej2.syncfusion.com/documentation/breadcrumb/introduction'></e-
breadcrumb-item>
    <e-breadcrumb-item text= 'Getting' url=
'https://ej2.syncfusion.com/documentation/breadcrumb/getting-started'></e-
breadcrumb-item>
    <e-breadcrumb-item text= 'Icons' url=
'https://ej2.syncfusion.com/documentation/breadcrumb/icons'></e-breadcrumb-
item>
    <e-breadcrumb-item text= 'Navigation' url=
'https://ej2.syncfusion.com/documentation/breadcrumb/navigation'></e-
breadcrumb-item>
    <e-breadcrumb-item text= 'Overflow' url=
'https://ej2.syncfusion.com/documentation/breadcrumb/overflow'></e-
breadcrumb-item>
  </e-breadcrumb-items>
</ejs-breadcrumb>
</div>
</template>
<script>
import Vue from 'vue';
import { BreadcrumbPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(BreadcrumbPlugin);
export default {
  data: function() {
    return {};
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";

```

```
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
body {
    margin-top: 100px;
    text-align: center;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/breadcrumb/getting-started-cs16" %}

### Open URL in new page or tab

To open the breadcrumb item in a new page or tab, set the target property of the required item url to blank in the Breadcrumb component. In the following example, the target property of items url was set to blank by using the [beforeItemRender](#) event which locates to the path in the new tab.

### APP.VUE

```
<template>
<div>
<ejs-breadcrumb :beforeItemRender="beforeItemRenderHandler">
    <e-breadcrumb-items>
        <e-breadcrumb-item text= 'Home' url=
'https://ej2.syncfusion.com/documentation/breadcrumb/introduction'></e-
breadcrumb-item>
        <e-breadcrumb-item text= 'Getting' url=
'https://ej2.syncfusion.com/documentation/breadcrumb/getting-started'></e-
breadcrumb-item>
        <e-breadcrumb-item text= 'Icons' url=
'https://ej2.syncfusion.com/documentation/breadcrumb/icons'></e-breadcrumb-
item>
        <e-breadcrumb-item text= 'Navigation' url=
'https://ej2.syncfusion.com/documentation/breadcrumb/navigation'></e-
breadcrumb-item>
        <e-breadcrumb-item text= 'Overflow' url=
'https://ej2.syncfusion.com/documentation/breadcrumb/overflow'></e-
breadcrumb-item>
    </e-breadcrumb-items>
</ejs-breadcrumb>
</div>
</template>
<script>
import Vue from 'vue';
import { BreadcrumbPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(BreadcrumbPlugin);
export default {
    data: function() {
        return {};
    },
    methods: {
        beforeItemRenderHandler: function(args) {
            if (args.element.children[0]) {
                args.element.children[0].target = "_blank";
            }
        }
    }
}
</script>
```

```

<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
body {
    margin-top: 100px;
    text-align: center;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/breadcrumb/getting-started-cs17" %}

### Template in Vue Breadcrumb component

The Breadcrumb component provides a way to customize the items using [itemTemplate](#) and the separators using [separatorTemplate](#) properties.

#### Item Template

In the following example, Shopping Cart details are used as breadcrumb Items and the items are customized by the chips component using [itemTemplate](#).

#### APP.VUE

```

<template>
<div>
<ejs-breadcrumb cssClass="e-breadcrumb-chips" :itemTemplate="chipTemplate">
    <e-breadcrumb-items>
        <e-breadcrumb-item text="Cart"></e-breadcrumb-item>
        <e-breadcrumb-item text="Billing"></e-breadcrumb-item>
        <e-breadcrumb-item text="Shipping"></e-breadcrumb-item>
        <e-breadcrumb-item text="Payment"></e-breadcrumb-item>
    </e-breadcrumb-items>
</ejs-breadcrumb>
</div>
</template>
<script>
import Vue from 'vue';
import { BreadcrumbPlugin } from "@syncfusion/ej2-vue-navigations";
import { ChipListPlugin } from "@syncfusion/ej2-vue-buttons";
Vue.use(BreadcrumbPlugin);
Vue.use(ChipListPlugin);
export default {
    data: function() {
        return {
            chipTemplate:() => {
                return {
                    template : Vue.component('itemTemplate', {
                        template:
                            `<ejs-chiplist id="chip-default">
                                <e-chips>
                                    <e-chip :text="data.text"></e-chip>
                                </e-chips>
                            </ejs-chiplist>`
                    })
                }
            }
        },
    };

```

```

    }
  }
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
body {
    margin-top: 100px;
    text-align: center;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/breadcrumb/getting-started-cs24" %}

### Separator Template

In the following example, the separators are customized with icons using [separatorTemplate](#).

#### APP.VUE

```

<template>
<div>
<ejs-breadcrumb :separatorTemplate= "separatorTemplate">
    <e-breadcrumb-items>
        <e-breadcrumb-item text="Cart"></e-breadcrumb-item>
        <e-breadcrumb-item text="Billing"></e-breadcrumb-item>
        <e-breadcrumb-item text="Shipping"></e-breadcrumb-item>
        <e-breadcrumb-item text="Payment"></e-breadcrumb-item>
    </e-breadcrumb-items>
</ejs-breadcrumb>
</div>
</template>
<script>
import Vue from 'vue';
import { BreadcrumbPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(BreadcrumbPlugin);
export default {
    data: function() {
        return {
            separatorTemplate: '<span class="e-icons e-arrow"></span>',
        };
    }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";

### Customize Specific Item Template

The specific breadcrumb item can be customizable using `itemTemplate` with conditional rendering. In the following example, added the `span` element only for the `breadcrumb` text in breadcrumb item.

#### APP.VUE

```
<template>
<div>
<ejs-breadcrumb :enableNavigation='false' cssClass="e-specific-item-
template" :itemTemplate="specificItemTemplate">
  <e-breadcrumb-items>
    <e-breadcrumb-item text= 'Home' url=
'https://ej2.syncfusion.com/vue/demos/'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Components' url=
'https://ej2.syncfusion.com/vue/demos/datagrid/overview'></e-breadcrumb-
item>
    <e-breadcrumb-item text= 'Navigations' url=
'https://ej2.syncfusion.com/vue/demos/menu/default'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Breadcrumb' url=
'https://ej2.syncfusion.com/vue/demos/breadcrumb/default'></e-breadcrumb-
item>
  </e-breadcrumb-items>
</ejs-breadcrumb>
</div>
</template>
<script>
import Vue from 'vue';
import { BreadcrumbPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(BreadcrumbPlugin);
export default {
  data: function() {
    return {
      specificItemTemplate: () => {
        return {
          template: Vue.component('specificItemTemplate', {
            template: `<div>
              <span v-if="data.text == 'Breadcrumb'" class="e-searchfor-
text"><span style="margin-right: 5px">Search for:</span>
              <a class="e-breadcrumb-text" :href="data.url" onclick="return
false">{{data.text}}</a></span>
              <a v-else class="e-breadcrumb-text" :href="data.url"
onclick="return false">{{data.text}}</a>
            </div>`
          })
        },
      },
    };
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";

}
```

```
}
</style>
```

```
{% previewsample "page.domainurl/code-snippet/breadcrumb/getting-started-cs26" %}
```

## Overflow in Vue Breadcrumb component

In the Breadcrumb component, [maxItems](#) and [overflowMode](#) properties were used to limit the number of breadcrumb items to be displayed.

In the following example, the [maxItems](#) is set as 3 with [overflowMode](#) as Default. To prevent breadcrumb item navigation, the [enableNavigation](#) property has been set to false in the Breadcrumb component.

### APP.VUE

```
<template>
<div>
<ejs-breadcrumb maxItems='3' :enableNavigation='false'
:separatorTemplate="separatorTemplate">
  <e-breadcrumb-items>
    <e-breadcrumb-item text= 'Home' url= '../'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Breadcrumb' url= './breadcrumb'></e-
breadcrumb-item>
    <e-breadcrumb-item text= 'Default' url= './breadcrumb/default'></e-
breadcrumb-item>
    <e-breadcrumb-item text= 'Icons' url= './breadcrumb/icons'></e-
breadcrumb-item>
    <e-breadcrumb-item text= 'Navigations' url=
'./breadcrumb/navigations'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Overflow' url= './breadcrumb/overflow'></e-
breadcrumb-item>
  </e-breadcrumb-items>
</ejs-breadcrumb>
</div>
</template>
<script>
import Vue from 'vue';
import { BreadcrumbPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(BreadcrumbPlugin);
export default {
  data: function() {
    return {
      separatorTemplate: '<span class="e-bicons e-arrow"></span>',
    };
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";

font-size: 9px;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/breadcrumb/getting-started-cs18" %}

The following overflow modes are available in the Breadcrumb component.

- Collapsed
- Menu
- Wrap
- Scroll
- Hidden
- None

### Collapsed

Collapsed mode shows the first and last Breadcrumb items and hides the remaining items with a collapsed icon. When the collapsed icon is clicked, all items become visible and navigable.

#### APP.VUE

```
<template>
<div>
<ejs-breadcrumb maxItems='3' :enableNavigation='false'
overflowMode="Collapsed">
  <e-breadcrumb-items>
    <e-breadcrumb-item text= 'Home' url= '../'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Breadcrumb' url= './breadcrumb'></e-
breadcrumb-item>
    <e-breadcrumb-item text= 'Default' url= './breadcrumb/default'></e-
breadcrumb-item>
    <e-breadcrumb-item text= 'Icons' url= './breadcrumb/icons'></e-
breadcrumb-item>
    <e-breadcrumb-item text= 'Navigations' url=
'./breadcrumb/navigations'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Overflow' url= './breadcrumb/overflow'></e-
breadcrumb-item>
  </e-breadcrumb-items>
</ejs-breadcrumb>
</div>
</template>
<script>
import Vue from 'vue';
import { BreadcrumbPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(BreadcrumbPlugin);
export default {
  data: function() {
    return {
    };
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
```

```
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
body {
    margin-top: 100px;
    text-align: center;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/breadcrumb/getting-started-cs19" %}

## Menu

Menu mode shows the number of Breadcrumb items that can be accommodated within the container space and creates a submenu with the remaining items.

## APP.VUE

```
<template>
<div>
<ejs-breadcrumb maxItems='3' :enableNavigation='false' overflowMode="Menu">
    <e-breadcrumb-items>
        <e-breadcrumb-item text= 'Home' url= '../'></e-breadcrumb-item>
        <e-breadcrumb-item text= 'Breadcrumb' url= './breadcrumb'></e-
breadcrumb-item>
        <e-breadcrumb-item text= 'Default' url= './breadcrumb/default'></e-
breadcrumb-item>
        <e-breadcrumb-item text= 'Icons' url= './breadcrumb/icons'></e-
breadcrumb-item>
        <e-breadcrumb-item text= 'Navigations' url=
'./breadcrumb/navigations'></e-breadcrumb-item>
        <e-breadcrumb-item text= 'Overflow' url= './breadcrumb/overflow'></e-
breadcrumb-item>
    </e-breadcrumb-items>
</ejs-breadcrumb>
</div>
</template>
<script>
import Vue from 'vue';
import { BreadcrumbPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(BreadcrumbPlugin);
export default {
    data: function() {
        return {
        };
    }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
body {
    margin-top: 100px;
    text-align: center;
}
</style>
```

```
{% previewsample "page.domainurl/code-snippet/breadcrumb/getting-started-cs20" %}
```

### Wrap

Wrap mode wraps the items to multiple lines when the Breadcrumb's width exceeds the container space.

### APP.VUE

```
<template>
<div>
<ejs-breadcrumb maxItems='3' :enableNavigation='false' overflowMode="Wrap">
  <e-breadcrumb-items>
    <e-breadcrumb-item text= 'Home' url= '../'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Breadcrumb' url= './breadcrumb'></e-
breadcrumb-item>
    <e-breadcrumb-item text= 'Default' url= './breadcrumb/default'></e-
breadcrumb-item>
    <e-breadcrumb-item text= 'Icons' url= './breadcrumb/icons'></e-
breadcrumb-item>
    <e-breadcrumb-item text= 'Navigations' url=
'./breadcrumb/navigations'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Overflow' url= './breadcrumb/overflow'></e-
breadcrumb-item>
  </e-breadcrumb-items>
</ejs-breadcrumb>
</div>
</template>
<script>
import Vue from 'vue';
import { BreadcrumbPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(BreadcrumbPlugin);
export default {
  data: function() {
    return {
    };
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
body {
  margin-top: 100px;
  text-align: center;
}
</style>
```

```
{% previewsample "page.domainurl/code-snippet/breadcrumb/getting-started-cs21" %}
```

### Scroll

Scroll mode shows an HTML scroll bar when the Breadcrumb's width exceeds the container space.

### APP.VUE

```
<template>
<div>
```

```

<ejs-breadcrumb maxItems='3' :enableNavigation='false'
overflowMode="Scroll">
  <e-breadcrumb-items>
    <e-breadcrumb-item text= 'Home' url= '../'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Breadcrumb' url= './breadcrumb'></e-
breadcrumb-item>
    <e-breadcrumb-item text= 'Default' url= './breadcrumb/default'></e-
breadcrumb-item>
    <e-breadcrumb-item text= 'Icons' url= './breadcrumb/icons'></e-
breadcrumb-item>
    <e-breadcrumb-item text= 'Navigations' url=
'./breadcrumb/navigations'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Overflow' url= './breadcrumb/overflow'></e-
breadcrumb-item>
  </e-breadcrumb-items>
</ejs-breadcrumb>
</div>
</template>
<script>
import Vue from 'vue';
import { BreadcrumbPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(BreadcrumbPlugin);
export default {
  data: function() {
    return {
    };
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
body {
  margin-top: 100px;
  text-align: center;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/breadcrumb/getting-started-cs22" %}

### Hidden

Hidden mode shows the maximum number of items possible in the container space and hides the remaining items. Clicking on a previous item will make the hidden item visible.

### APP.VUE

```

<template>
<div>
<ejs-breadcrumb maxItems='3' :enableNavigation='false'
overflowMode="Hidden">
  <e-breadcrumb-items>
    <e-breadcrumb-item text= 'Home' url= '../'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Breadcrumb' url= './breadcrumb'></e-
breadcrumb-item>

```

```

    <e-breadcrumb-item text= 'Default' url= './breadcrumb/default'></e-
breadcrumb-item>
    <e-breadcrumb-item text= 'Icons' url= './breadcrumb/icons'></e-
breadcrumb-item>
    <e-breadcrumb-item text= 'Navigations' url=
'./breadcrumb/navigations'></e-breadcrumb-item>
    <e-breadcrumb-item text= 'Overflow' url= './breadcrumb/overflow'></e-
breadcrumb-item>
  </e-breadcrumb-items>
</ejs-breadcrumb>
</div>
</template>
<script>
import Vue from 'vue';
import { BreadcrumbPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(BreadcrumbPlugin);
export default {
  data: function() {
    return {
    };
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
body {
  margin-top: 100px;
  text-align: center;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/breadcrumb/getting-started-cs23" %}

None

None mode shows all the items on a single line.

### Accessibility in Vue Breadcrumb component

The Breadcrumb component followed the accessibility guidelines and standards, including [ADA](#), [Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the Breadcrumb component is outlined below.

| Accessibility Criteria | Compatibility |

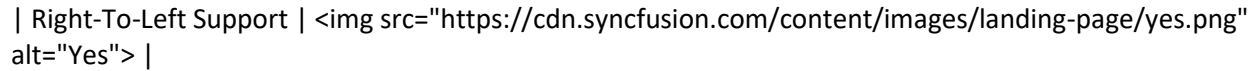

| -- | -- |

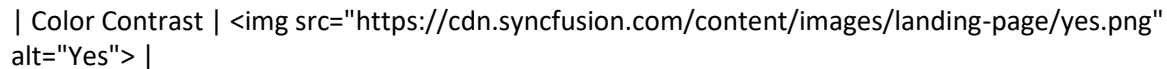

| [WCAG 2.2](#) Support |  |

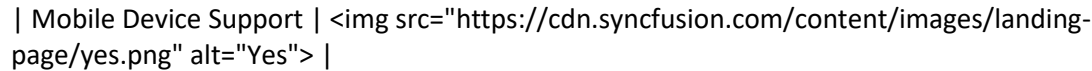

| [Section 508](#) Support |  |

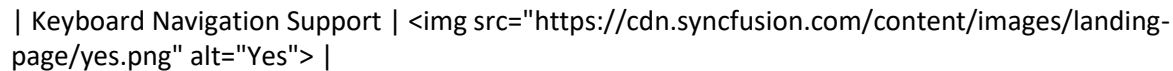

| Screen Reader Support |  |

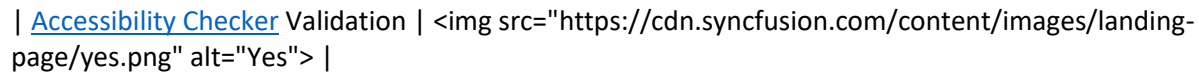

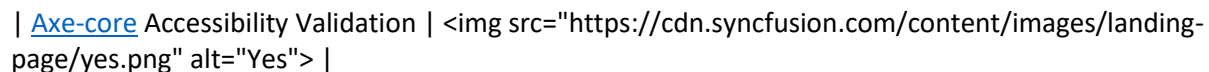

| Right-To-Left Support |  |

| Color Contrast |  |

| Mobile Device Support |  |

| Keyboard Navigation Support |  |

| [Accessibility Checker](#) Validation |  |

| [Axe-core](#) Accessibility Validation |  |

<style>

```
.post .post-content img {  
display: inline-block;  
margin: 0.5em 0;  
}
```

</style>

<div><img alt="Yes" data-bbox="112 485 844 519"/> - All features of the component meet the requirement.</div>

<div><img alt="Intermediate" data-bbox="112 526 802 561"/> - Some features of the component do not meet the requirement.</div>

<div><img alt="No" data-bbox="112 568 844 602"/> - The component does not meet the requirement.</div>

### WAI-ARIA attributes

The Breadcrumb component followed the [WAI-ARIA](#) patterns to meet the accessibility. The following ARIA attributes are used in the Breadcrumb component:

| Attributes | Purpose |

| --- | --- |

| `aria-label` | Indicates the breadcrumb item text. |

| `aria-disabled` | Indicates the state of breadcrumb item whether it is disabled. |

### Keyboard interaction

The Breadcrumb component followed the [keyboard interaction](#) guideline, making it easy for people who use assistive technologies (AT) and those who completely rely on keyboard navigation. The following keyboard shortcuts are supported by the Breadcrumb component.

| **Press** | **To do this** |

| --- | --- |

| Tab | Navigate to the next item and also next item in the popup of menu type overflow. |

| Shift + Tab | Navigate to the previous item also previous item in the popup of menu type overflow. |

| Enter key in normal mode | Select the breadcrumb item. |

| Enter key in normal mode | To open the popup of menu type overflow mode when you press enter on collapsed button and It will expand the items of collapsed type overflow mode when you press enter on collapsed button. |

### Ensuring accessibility

The Breadcrumb component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Breadcrumb component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Breadcrumb component with accessibility tools.

```
{% previewsample "page.domainurl/code-snippet/breadcrumb/accessibility-cs1" %}
```

## Bullet Chart

### Getting Started with the Vue Bullet chart Component in Vue 2

This article provides a step-by-step guide for setting up a Vue 2 project using [Vue-CLI](#) and integrating the Syncfusion Vue Bullet chart component

### Prerequisites

[System requirements for Syncfusion Vue UI components](#)

### Dependencies

Below is the list of minimum dependencies required to use the Bullet Chart component.

```
`javascript
|-- @syncfusion/ej2-vue-charts
|-- @syncfusion/ej2-base
|-- @syncfusion/ej2-data
|-- @syncfusion/ej2-pdf-export
|-- @syncfusion/ej2-file-utils
|-- @syncfusion/ej2-compression
|-- @syncfusion/ej2-charts
|-- @syncfusion/ej2-vue-base
|-- @syncfusion/ej2-svg-base
`
```

### Setting up the Vue 2 project

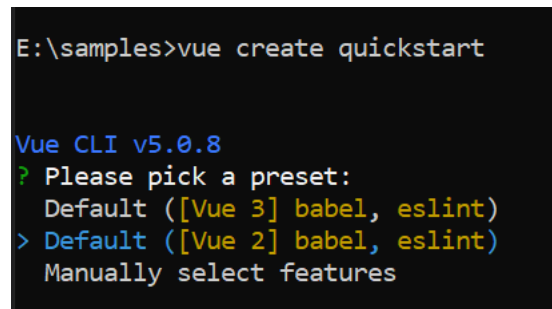

To generate a Vue 2 project using Vue-CLI, use the [vue create](#) command. Follow these steps to install Vue CLI and create a new project:

```
`bash
npm install -g @vue/cli
vue create quickstart
cd quickstart
npm run serve
`
```

or

```
`bash
yarn global add @vue/cli
vue create quickstart
cd quickstart
yarn run serve
`
```

When creating a new project, choose the option `Default ([Vue 2] babel, eslint)` from the menu.

```
E:\samples>vue create quickstart

Vue CLI v5.0.8
? Please pick a preset:
  Default ([Vue 3] babel, eslint)
> Default ([Vue 2] babel, eslint)
  Manually select features
```

Once the `quickstart` project is set up with default settings, proceed to add Syncfusion components to the project.

### Add Syncfusion Vue packages

Syncfusion packages are available at [npmjs.com](https://www.npmjs.com). To use Vue components, install the required npm package.

This article uses the [Vue Bullet chart component](#) as an example. Install the `@syncfusion/ej2-vue-charts` package by running the following command:

```
`bash
npm install @syncfusion/ej2-vue-charts --save
`

or
```

```
`bash
```

```
yarn add @syncfusion/ej2-vue-charts
```

```
,
```

The **--save** will instruct NPM to include the Bullet Chart package inside of the **dependencies** section of the **package.json**.

### Add Syncfusion Vue component

Follow the below steps to add the Vue Bullet chart component using:

1\ First, import and register the Bullet chart component in the **script** section of the **src/App.vue** file.

#### ~/SRC/APP.VUE

```
<script>
import { BulletChartComponent } from '@syncfusion/ej2-vue-charts';
export default {
  components: {
    'ejs-bulletchart': BulletChartComponent
  }
}
</script>
```

2\ In the **template** section, define the Bullet chart component.

#### ~/SRC/APP.VUE

```
<template>
<div>
<ejs-bulletchart id="bulletChart"> </ejs-bulletchart>
</div>
</template>
```

Here is the summarized code for the above steps in the **src/App.vue** file:

#### ~/SRC/APP.VUE

```
<template>
  <div>
    <ejs-bulletchart id="bulletChart"> </ejs-bulletchart>
  </div>
</template>
<script>
import { BulletChartComponent } from '@syncfusion/ej2-vue-charts';
export default {
  components: {
    'ejs-bulletchart': BulletChartComponent
  },
  data () {
    return {
    }
  }
}
</script>
```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run serve
```

```
,
```

or

```
`bash
```

```
yarn run serve
```

```
,
```

```
{% previewsample "page.domainurl/code-snippet/bullet-chart/getting-started/initialize-cs1" %}
```

### Module Injection

Bullet Chart component are segregated into individual feature-wise modules. In order to use a particular feature, you need to inject its feature module using `provide` method. In the current application, we are going to use tooltip feature of the Bullet Chart.

- **BulletTooltip** - Inject this provider to use tooltip feature.

These modules should be injected to the provide method as follows,

```
`ts
```

```
import { BulletChartComponent, BulletTooltip } from "@syncfusion/ej2-vue-charts";
```

```
export default {
```

```
  components: {
```

```
    'ejs-bullectchart': BulletChartComponent
```

```
  },
```

```
  provide: {
```

```
    bulletChart: [BulletTooltip]
```

```
  }
```

```
};
```

```
,
```

### BulletChart With Data

This section explains how to plot local data to the Bullet Chart.

```
`ts
```

```
let data: any[] = [
```

```
  { value: 100, target: 80 },
```

```
  { value: 200, target: 180 },
```

```
  { value: 300, target: 280 },
```

```
{ value: 400, target: 380 },
{ value: 500, target: 480 },
];
,
```

Now assign the local data to [dataSource](#) property. **value** and **target** values should be mapped with [valueField](#) and [targetField](#) respectively.

#### ~/SRC/APP.VUE

```
<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      height="300"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
    > </ejs-bulletchart>
  </div>
</template>
<script>
import { BulletChartComponent } from '@syncfusion/ej2-vue-charts';
export default {
  components: {
    'ejs-bulletchart': BulletChartComponent
  },
  data () {
    return {
      data: [
        { value: 100, target: 80 },
        { value: 200, target: 180 },
        { value: 300, target: 280 },
        { value: 400, target: 380 },
        { value: 500, target: 480 },
      ],
      minimum: 0, maximum: 300, interval: 50
    }
  }
}
</script>
```

{% previewsample "page.domainurl/code-snippet/bullet-chart/getting-started/datasource-cs1" %}

#### Add Bullet Chart Title

You can add a title using [title](#) property to the Bullet Chart to provide quick information to the user about the data plotted in the Bullet Chart.

#### ~/SRC/APP.VUE

```
<template>
  <div>
```

```

    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Revenue"
    > </ejs-bulletchart>
  </div>
</template>
<script>
import { BulletChartComponent } from '@syncfusion/ej2-vue-charts';
export default {
  components: {
    'ejs-bulletchart': BulletChartComponent
  },
  data () {
    return {
      data: [{ value: 270, target: 250 }],
      minimum: 0, maximum: 300, interval: 50
    }
  }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/bullet-chart/getting-started/title-cs1" %}

### Ranges

You can add a range using `e-bullet-range` of the `e-bullet-range-collection`.

### ~/SRC/APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Revenue"
    >
      <e-bullet-range-collection>
        <e-bullet-range end="100" color="red"></e-bullet-range>
        <e-bullet-range end="200" color="blue"></e-bullet-range>
        <e-bullet-range end="300" color="green"></e-bullet-range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import { BulletChartComponent, BulletRangeCollectionDirective,
BulletRangeDirective } from '@syncfusion/ej2-vue-charts';
export default {

```

```

components: {
  'ejs-bulletchart': BulletChartComponent,
  'e-bullet-range-collection': BulletRangeCollectionDirective,
  'e-bullet-range': BulletRangeDirective
},
data () {
  return {
    data: [{ value: 270, target: 250 }],
    minimum: 0, maximum: 300, interval: 50
  }
}
}
</script>

```

{% previewsample "page.domainurl/code-snippet/bullet-chart/getting-started/ranges-cs1" %}

### Tooltip

You can use tooltip for the Bullet Chart by setting the [enable](#) property to true in [tooltip](#) object and by injecting the `BulletTooltip` module using `provide` method.

### ~/SRC/APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Revenue"
      :tooltip="tooltip"
    > </ejs-bulletchart>
  </div>
</template>
<script>
import { BulletChartComponent, BulletTooltip } from '@syncfusion/ej2-vue-charts';
export default {
  components: {
    'ejs-bulletchart': BulletChartComponent
  },
  data () {
    return {
      data: [{ value: 270, target: 250 }],
      minimum: 0, maximum: 300, interval: 50,
      tooltip: { enable: true }
    }
  },
  provide: {
    bulletChart: [BulletTooltip]
  }
}
</script>

```

```
{% previewsample "page.domainurl/code-snippet/bullet-chart/getting-started/tooltip-cs1" %}
```

## Getting Started with the Vue Bullet Chart Component in Vue 3

This article provides a step-by-step guide for setting up a [Vite](#) project with a JavaScript environment and integrating the Syncfusion Vue Bullet Chart component using the [Composition API](#) / [Options API](#).

The **Composition API** is a new feature introduced in Vue.js 3 that provides an alternative way to organize and reuse component logic. It allows developers to write components as functions that use smaller, reusable functions called composition functions to manage their properties and behavior.

The **Options API** is the traditional way of writing Vue.js components, where the component logic is organized into a series of options that define the component's properties and behavior. These options include data, methods, computed properties, watchers, lifecycle hooks, and more.

### Prerequisites

#### [System requirements for Syncfusion Vue UI components](#)

#### Set up the Vite project

A recommended approach for beginning with Vue is to scaffold a project using [Vite](#). To create a new Vite project, use one of the commands that are specific to either NPM or Yarn.

```
`bash
```

```
npm create vite@latest
```

```
,
```

```
or
```

```
`bash
```

```
yarn create vite
```

```
,
```

Using one of the above commands will lead you to set up additional configurations for the project as below:

1. Define the project name: We can specify the name of the project directly. Let's specify the name of the project as **my-project** for this article.

```
`bash
```

```
? Project name: » my-project
```

```
,
```

2. Select **Vue** as the framework. It will create a Vue 3 project.

```
`bash
```

```
? Select a framework: » - Use arrow-keys. Return to submit.
```

```
Vanilla
```

```
Vue
```

```
React
```

```
Preact
```

Lit

Svelte

Others

,

3. Choose **JavaScript** as the framework variant to build this Vite project using JavaScript and Vue.

```
`bash
```

? Select a variant: » - Use arrow-keys. Return to submit.

JavaScript

TypeScript

Customize with create-vue ↗

Nuxt ↗

,

4. Upon completing the aforementioned steps to create the **my-project**, run the following command to install its dependencies:

```
`bash
```

```
cd my-project
```

```
npm install
```

,

or

```
`bash
```

```
cd my-project
```

```
yarn install
```

,

Now that **my-project** is ready to run with default settings, let's add Syncfusion components to the project.

#### Add Syncfusion Vue packages

Syncfusion Vue component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion Vue components in the project, install the corresponding npm package.

This article uses the [Vue Bullet Chart component](#) as an example. To use the Vue Bullet Chart component in the project, the **@syncfusion/ej2-vue-charts** package needs to be installed using the following command:

```
`bash
```

```
npm install @syncfusion/ej2-vue-charts --save
```

,

or

```
`bash
```

```
yarn add @syncfusion/ej2-vue-charts
```

```
,
```

### Add Syncfusion Vue component

Follow the below steps to add the Vue Bullet Chart component using **Composition API** or **Options API**:

1.First, import and register the Bullet Chart component and its child directives in the **script** section of the **src/App.vue** file. If you are using the **Composition API**, you should add the **setup** attribute to the **script** tag to indicate that Vue will be using the **Composition API**.

#### **COMPOSITION API (~SRC/APP.VUE)**

```
<script setup>
import { BulletChartComponent as EjsBulletchart, BulletTooltip,
BulletRangeCollectionDirective as EBulletRangeCollection,
BulletRangeDirective as EBulletRange } from "@syncfusion/ej2-vue-charts";
</script>
```

#### **OPTIONS API (~SRC/APP.VUE)**

```
<script>
import { BulletChartComponent, BulletTooltip,
BulletRangeCollectionDirective, BulletRangeDirective } from
"@syncfusion/ej2-vue-charts";
//Component registration
export default {
name: "App",
components: {
"ejs-bulletchart": BulletChartComponent,
"e-bullet-range-collection": BulletRangeCollectionDirective,
"e-bullet-range": BulletRangeDirective
}
}
</script>
```

2.In the **template** section, define the Bullet Chart component with the [dataSource](#) property.

#### **~/SRC/APP.VUE**

```
<template>
<ejs-bulletchart :dataSource="data" :valueField="valueField"
:tooltip="tooltip" :targetField="targetField" :height="height"
:title="title" :minimum="minimum" :maximum="maximum" :interval="interval">
<e-bullet-range-collection>
<e-bullet-range end="100" color="red"></e-bullet-range>
<e-bullet-range end="200" color="blue"></e-bullet-range>
<e-bullet-range end="300" color="green"></e-bullet-range>
</e-bullet-range-collection>
</ejs-bulletchart>
</template>
```

3.Declare the values for the **dataSource** property in the **script** section.

**COMPOSITION API (~SRC/APP.VUE)**

```
<script setup>
const data = [
  { value: 100, target: 80 },
  { value: 200, target: 180 },
  { value: 300, target: 280 },
  { value: 400, target: 180 },
  { value: 500, target: 230 }
];
const minimum = 0;
const maximum = 300;
const interval = 50;
const tooltip = { enable: true };
const title = 'Revenue';
const height = '300px';
const targetField = 'target';
const valueField = 'value';
</script>
```

**OPTIONS API (~SRC/APP.VUE)**

```
<script>
data() {
  return {
    data: [
      { value: 100, target: 80 },
      { value: 200, target: 180 },
      { value: 300, target: 280 },
      { value: 400, target: 180 },
      { value: 500, target: 230 }
    ],
    minimum: 0,
    maximum: 300,
    interval: 50,
    tooltip: { enable: true },
    title: 'Revenue',
    height: '300px',
    targetField: 'target',
    valueField: 'value'
  };
}
</script>
```

Here is the summarized code for the above steps in the **src/App.vue** file:

**COMPOSITION API (~SRC/APP.VUE)**

```
<template>
<ejs-bulletchart :dataSource="data" :valueField="valueField"
:tooltip="tooltip" :targetField="targetField" :height="height"
:title="title" :minimum="minimum" :maximum="maximum" :interval="interval">
<e-bullet-range-collection>
<e-bullet-range end="100" color="red"></e-bullet-range>
<e-bullet-range end="200" color="blue"></e-bullet-range>
<e-bullet-range end="300" color="green"></e-bullet-range>
</template>
```

```

</e-bullet-range-collection>
</ejs-bulletchart>
</template>
<script setup>
import { provide } from 'vue';
import { BulletChartComponent as EjsBulletchart, BulletTooltip,
BulletRangeCollectionDirective as EBulletRangeCollection,
BulletRangeDirective as EBulletRange } from "@syncfusion/ej2-vue-charts";
const data = [
{ value: 100, target: 80 },
{ value: 200, target: 180 },
{ value: 300, target: 280 },
{ value: 400, target: 180 },
{ value: 500, target: 230 }
];
const minimum = 0;
const maximum = 300;
const interval = 50;
const tooltip = { enable: true };
const title = 'Revenue';
const height = '300px';
const targetField = 'target';
const valueField = 'value';
const bulletChart = [ BulletTooltip ];
provide('bulletChart', bulletChart);
</script>

```

### OPTIONS API (~SRC/APP.VUE)

```

<template>
<ejs-bulletchart :dataSource="data" :valueField="valueField"
:tooltip="tooltip" :targetField="targetField" :height="height"
:title="title" :minimum="minimum" :maximum="maximum" :interval="interval">
<e-bullet-range-collection>
<e-bullet-range end="100" color="red"></e-bullet-range>
<e-bullet-range end="200" color="blue"></e-bullet-range>
<e-bullet-range end="300" color="green"></e-bullet-range>
</e-bullet-range-collection>
</ejs-bulletchart>
</template>
<script>
import { BulletChartComponent, BulletTooltip,
BulletRangeCollectionDirective, BulletRangeDirective } from
"@syncfusion/ej2-vue-charts";
//Component registration
export default {
name: "App",
components: {
"ejs-bulletchart": BulletChartComponent,
"e-bullet-range-collection": BulletRangeCollectionDirective,
"e-bullet-range": BulletRangeDirective
},
data() {
return {
data: [
{ value: 100, target: 80 },

```

```
{ value: 200, target: 180 },  
{ value: 300, target: 280 },  
{ value: 400, target: 180 },  
{ value: 500, target: 230 }  
],  
minimum: 0,  
maximum: 300,  
interval: 50,  
tooltip: { enable: true },  
title: 'Revenue',  
height: '300px',  
targetField: 'target',  
valueField: 'value'  
};  
},  
provide: {  
  bulletChart: [ BulletTooltip ]  
},  
};  
</script>
```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run dev
```

```
,
```

or

```
`bash
```

```
yarn run dev
```

```
,
```

The output will appear as follows:

**Sample:** [vue-3-bullet-chart-getting-started](#).

For migrating from Vue 2 to Vue 3, refer to the [migration](#) documentation.

## Bullet chart dimensions in Vue Bullet chart component

### Size for Container

The size of the Bullet Chart is determined by the container size, and it can be changed inline or via CSS as following.

```
,  
  
<style>  
bulletChart {  
width: 350px;  
}  
</style>  
  
<template>  
  <div>  
    <ejs-bulletchart id="bulletChart"> </ejs-bulletchart>  
  </div>  
</template>  
  
<script>  
import Vue from 'vue';  
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';  
Vue.use(BulletChartPlugin);  
export default {  
  data() { /*  
    */  
  }  
}  
</script>  
,
```

### APP.VUE

```
<template>  
  <div>  
    <ejs-bulletchart id="bulletChart"  
      :dataSource="data"  
      valueField="value"  
      targetField="target"  
      :minimum="minimum"  
      :maximum="maximum"  
      :interval="interval"  
      title="Revenue"  
    >  
      <e-bullet-range-collection>
```

```

        <e-bullet-range end="100" color="red"></e-bullet-range>
        <e-bullet-range end="200" color="blue"></e-bullet-range>
        <e-bullet-range end="300" color="green"></e-bullet-range>
    </e-bullet-range-collection>
</ejs-bulletchart>
</div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
    data () {
        return {
            data: [{ value: 270, target: 250 }],
            minimum: 0, maximum: 300, interval: 50
        }
    }
}
</script>
<style>
    #bulletChart {
        width: 550px;
    }
</style>

```

```
{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs1" %}
```

### Size for Bullet Chart

The [width](#) and [height](#) properties are used to adjust the size of the Bullet Chart.

### APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Revenue"
      width="100%"
      height="100%"
    >
      <e-bullet-range-collection>
        <e-bullet-range end="100" color="red"></e-bullet-range>
        <e-bullet-range end="200" color="blue"></e-bullet-range>
        <e-bullet-range end="300" color="green"></e-bullet-range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>

```

```
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 270, target: 250 }],
      minimum: 0, maximum: 300, interval: 50
    }
  }
}
</script>
```

```
{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs2"
%}
```

[Pixel](#)

Can set the size of the Bullet Chart in pixels as shown below.

### APP.VUE

```
<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Revenue"
      width="600px"
      height="120px"
    >
      <e-bullet-range-collection>
        <e-bullet-range end="100" color="red"></e-bullet-range>
        <e-bullet-range end="200" color="blue"></e-bullet-range>
        <e-bullet-range end="300" color="green"></e-bullet-range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 270, target: 250 }],
      minimum: 0, maximum: 300, interval: 50
    }
  }
}
</script>
```

{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs3"%}

### Percentage

By setting a value in percentage, the Bullet Chart gets its dimension with respect to its container. For example, when the height is **50%**, the Bullet Chart renders to half of the container's height.

### APP.VUE

```
<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Revenue"
      width="100%"
      height="100%"
    >
      <e-bullet-range-collection>
        <e-bullet-range end="100" color="red"></e-bullet-range>
        <e-bullet-range end="200" color="blue"></e-bullet-range>
        <e-bullet-range end="300" color="green"></e-bullet-range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 270, target: 250 }],
      minimum: 0, maximum: 300, interval: 50
    }
  }
}
</script>
```

{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs4"%}

If the size is not specified, the Bullet Chart will be rendered with a height of **126px** and a width of the window.

### Axis customization in Vue Bullet chart component

#### MajorTickLines and MinorTickLines Customization

The following properties can be used to customize [majorTicklines](#) and [minorTicklines](#).

- **width** - Specifies the width of ticklines.

- **height** - Specifies the height of ticklines.
- **color** - Specifies the color of ticklines.
- **useRangeColor** - Specifies the color of ticklines and represents the color from corresponding range colors.

**APP.VUE**

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Revenue"
      :majorTickLines="majorTickLines"
      :minorTickLines="minorTickLines"
    >
      <e-bullet-range-collection>
        <e-bullet-range end="100" color="red"></e-bullet-range>
        <e-bullet-range end="200" color="blue"></e-bullet-range>
        <e-bullet-range end="300" color="green"></e-bullet-range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 270, target: 250 }],
      minimum: 0, maximum: 300, interval: 50,
      majorTickLines: { color: 'blue', width: 5 },
      minorTickLines: { color: 'red', width: 5 }
    }
  }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/bullet-chart/axis/custom-cs1" %}

**Tick Placement**

The major and the minor ticks can be placed **inside** or **outside** the ranges using the [tickPosition](#) property.

**APP.VUE**

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"

```

```

        :dataSource="data"
        valueField="value"
        targetField="target"
        :minimum="minimum"
        :maximum="maximum"
        :interval="interval"
        title="Revenue"
        tickPosition="Inside"
      >
      <e-bullet-range-collection>
        <e-bullet-range end="20" color="red"></e-bullet-range>
        <e-bullet-range end="25" color="blue"></e-bullet-range>
        <e-bullet-range end="30" color="green"></e-bullet-range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 23, target: 22 }],
      minimum: 0, maximum: 30, interval: 5
    }
  }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/bullet-chart/axis/custom-cs2" %}

### Label Format

Axis numeric labels can be formatted by using the [labelFormat](#) property. Axis labels support all globalize formats.

### APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Revenue"
      labelFormat="c"
    >
    <e-bullet-range-collection>
      <e-bullet-range end="500" color="red"></e-bullet-range>
      <e-bullet-range end="1000" color="blue"></e-bullet-range>
      <e-bullet-range end="1500" color="green"></e-bullet-range>
    </e-bullet-range-collection>
  </div>
</template>

```

```

    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 1100, target: 950 }],
      minimum: 0, maximum: 1500, interval: 500
    }
  }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/bullet-chart/axis/custom-cs3" %}

The following table describes the result of applying some commonly used formats to numeric axis labels.

<!-- markdownlint-disable MD033 -->

Label Value	Label Format property value	Result	Description
1000	n1	1000.0	The Number is rounded to 1 decimal place
1000	n2	1000.00	The Number is rounded to 2 decimal place
1000	n3	1000.000	The Number is rounded to 3 decimal place
0.01	p1	1.0%	The Number is converted to percentage with 1 decimal place
0.01	p2	1.00%	The Number is converted to percentage with 2 decimal place
0.01	p3	1.000%	The Number is converted to percentage with 3 decimal place
1000	c1	\$1000.0	The Currency symbol is appended to number and number is rounded to 1 decimal place
1000	c2	\$1000.00	The Currency symbol is appended to number and number is rounded to 2 decimal place

### GroupingSeparator

To separate the groups of thousands, set the [enableGroupSeparator](#) property to **true**.

### APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"

```

```

        valueField="value"
        targetField="target"
        :minimum="minimum"
        :maximum="maximum"
        :interval="interval"
        title="Revenue"
        enableGroupSeparator=true
      >
      <e-bullet-range-collection>
        <e-bullet-range end="500" color="red"></e-bullet-range>
        <e-bullet-range end="1000" color="blue"></e-bullet-range>
        <e-bullet-range end="1500" color="green"></e-bullet-range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 1100, target: 950 }],
      minimum: 0, maximum: 1500, interval: 500
    }
  }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/bullet-chart/axis/custom-cs4" %}

### Custom Label Format

Using the [labelFormat](#) property, axis labels can be specified with a custom defined format in addition to the axis value. The label format uses a placeholder such as `${value}K`, which represents the axis label.

### APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Revenue"
      labelFormat="${value}K"
    >
    <e-bullet-range-collection>
      <e-bullet-range end="100" color="red"></e-bullet-range>
      <e-bullet-range end="200" color="blue"></e-bullet-range>
      <e-bullet-range end="300" color="green"></e-bullet-range>
    </e-bullet-range-collection>
  </ejs-bulletchart>

```

```

    </div>
  </template>
  <script>
    import Vue from 'vue';
    import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
    Vue.use(BulletChartPlugin);
    export default {
      data () {
        return {
          data: [{ value: 270, target: 250 }],
          minimum: 0, maximum: 300, interval: 50
        }
      }
    }
  </script>

```

{% previewsample "page.domainurl/code-snippet/bullet-chart/axis/custom-cs5" %}

### Label Placement

Label can be placed **Inside** or **Outside** of the ranges using the [labelPosition](#) property.

### APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Revenue"
      labelPosition="Inside"
    >
      <e-bullet-range-collection>
        <e-bullet-range end="100" color="red"></e-bullet-range>
        <e-bullet-range end="200" color="blue"></e-bullet-range>
        <e-bullet-range end="300" color="green"></e-bullet-range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
  import Vue from 'vue';
  import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
  Vue.use(BulletChartPlugin);
  export default {
    data () {
      return {
        data: [{ value: 270, target: 250 }],
        minimum: 0, maximum: 300, interval: 50
      }
    }
  }
</script>

```

{% previewsample "page.domainurl/code-snippet/bullet-chart/axis/custom-cs6" %}

### Opposed Position

To place an axis opposite to its original position, set the [opposedPosition](#) property to **true**.

#### APP.VUE

```
<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Revenue"
      opposedPosition=true
    >
      <e-bullet-range-collection>
        <e-bullet-range end="100" color="red"></e-bullet-range>
        <e-bullet-range end="200" color="blue"></e-bullet-range>
        <e-bullet-range end="300" color="green"></e-bullet-range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 270, target: 250 }],
      minimum: 0, maximum: 300, interval: 50
    }
  }
}
</script>
```

{% previewsample "page.domainurl/code-snippet/bullet-chart/axis/custom-cs7" %}

### Category Label

The Bullet Chart supports X-axis label by specifying the property from the data source to the [categoryField](#). It helps to understand the input data in a more efficient way.

#### APP.VUE

```
<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
```

```

      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Revenue"
      categoryField="category"
    >
    <e-bullet-range-collection>
      <e-bullet-range end="100" color="red"></e-bullet-range>
      <e-bullet-range end="200" color="blue"></e-bullet-range>
      <e-bullet-range end="300" color="green"></e-bullet-range>
    </e-bullet-range-collection>
  </ejs-bulletchart>
</div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 270, target: 250, category: "Product A" }],
      minimum: 0, maximum: 300, interval: 50
    }
  }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/bullet-chart/axis/custom-cs8" %}

### Category Label Customization

The label color, opacity, font size, font family, font weight, and font style can be customized by using the [categoryLabelStyle](#) setting for category and the [labelStyle](#) setting for axis label. The [useRangeColor](#) property specifies the color of the axis label and represents the color from the corresponding range colors.

### APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Revenue"
      categoryField="category"
      :categoryLabelStyle="categoryStyle"
    >
    <e-bullet-range-collection>
      <e-bullet-range end="100" color="red"></e-bullet-range>
      <e-bullet-range end="200" color="blue"></e-bullet-range>
      <e-bullet-range end="300" color="green"></e-bullet-range>
    </e-bullet-range-collection>
  </div>
</template>

```

```

    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 270, target: 250, category: "Product A" }],
      minimum: 0, maximum: 300, interval: 50,
      categoryStyle: { color: "Orange" }
    }
  }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/bullet-chart/axis/custom-cs9" %}

### Data binding in Vue Bullet chart component

The [dataSource](#) property accepts a collection of values as input that helps to display measures, and compares them to a target bar. To display the actual and target bar, specify the property from the datasource into the [valueField](#) and [targetField](#) respectively.

#### APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="localData"
      valueField="value"
      targetField="comparativeMeasureValue"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Profit in %"
    >
      <e-bullet-range-collection>
        <e-bullet-range end="5" color="red"></e-bullet-range>
        <e-bullet-range end="15" color="blue"></e-bullet-range>
        <e-bullet-range end="20" color="green"></e-bullet-range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      localData: [{ value: 5, comparativeMeasureValue: 7.5, category:
'2001' },
                  { value: 7, comparativeMeasureValue: 5, category: '2002' },

```

```

        { value: 10, comparativeMeasureValue: 6, category: '2003' },
        { value: 5, comparativeMeasureValue: 8, category: '2004' },
        { value: 12, comparativeMeasureValue: 5, category: '2005' },
        { value: 8, comparativeMeasureValue: 6, category: '2006' }
      ],
      minimum: 0, maximum: 20, interval: 5
    }
  }
}
</script>

```

```

{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs12"
%}

```

### Ranges in Vue Bullet chart component

Ranges represent the quality of a specific range such as **Good**, **Bad** and **Satisfactory** in the Bullet Chart scale. The ending point of a qualitative range is specified in the [end](#) property in [ranges](#). The [minimum](#) value of a quantitative scale is considered the starting point of the first range or the previous range end point.

#### APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Revenue"
      categoryField="category"
      :categoryLabelStyle="categoryStyle"
      height="400px"
    >
      <e-bullet-range-collection>
        <e-bullet-range end="35" color="darkred" opacity= 0.5 ></e-bullet-
range>
        <e-bullet-range end="50" color="red" opacity= 1 ></e-bullet-range>
        <e-bullet-range end="75" color="blue" opacity= 0.7 ></e-bullet-
range>
        <e-bullet-range end="90" color="lightgreen" opacity= 1 ></e-
bullet-range>
        <e-bullet-range end="100" color="green" opacity= 1 ></e-bullet-
range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {

```

```

    return {
      data: [{ value: 55, target: 75, category: "Year 1" },
        { value: 70, target: 70, category: "Year 2" },
        { value: 85, target: 75, category: "Year 3" }],
      minimum: 0, maximum: 100, interval: 10,
      categoryStyle: { color: "red", size: "13", fontWeight: "bold" }
    }
  }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/bullet-chart/axis/custom-cs10" %}

### Color Customization

Enhance the readability of ranges with color and opacity. It can be applied using the [color](#) and [opacity](#) properties in [ranges](#).

### APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Revenue"
      categoryField="category"
      :categoryLabelStyle="categoryStyle"
      height="400px"
    >
      <e-bullet-range-collection>
        <e-bullet-range end="35" color="darkred" opacity= 0.5 ></e-bullet-
range>
        <e-bullet-range end="50" color="red" opacity= 1 ></e-bullet-range>
        <e-bullet-range end="75" color="blue" opacity= 0.7 ></e-bullet-
range>
        <e-bullet-range end="90" color="lightgreen" opacity= 1 ></e-
bullet-range>
        <e-bullet-range end="100" color="green" opacity= 1 ></e-bullet-
range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 55, target: 75, category: "Year 1" },
        { value: 70, target: 70, category: "Year 2" },

```

```

        { value: 85, target: 75, category: "Year 3" }],
        minimum: 0, maximum: 100, interval: 10,
        categoryStyle: { color: "red", size: "13", fontWeight: "bold" }
    }
}
}
</script>

```

{% previewsample "page.domainurl/code-snippet/bullet-chart/axis/custom-cs11" %}

### Value bar in Vue Bullet chart component

To display the primary data or the current value of the data being measured known as the **Feature Measure** that should be encoded as a bar. This is called as the **Actual Bar** or the **Feature Bar** in the Bullet Chart, and to display the actual bar the [valueField](#) should be mapped to the appropriate field from the data source.

### APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Sales Rate"
      categoryField="category"
    >
      <e-bullet-range-collection>
        <e-bullet-range end="35" color="red"></e-bullet-range>
        <e-bullet-range end="50" color="blue"></e-bullet-range>
        <e-bullet-range end="100" color="green"></e-bullet-range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 55, target: 75, category: "Year 1" }],
      minimum: 0, maximum: 100, interval: 20
    }
  }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs24" %}

### Types of actual bar

The shape of the actual bar can be customized using the [type](#) property of the Bullet Chart. The actual bar contains **Rect** and **Dot** shapes. By default, the actual bar shape is Rect.

#### APP.VUE

```
<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Sales Rate"
      categoryField="category"
      type="Dot"
    >
    <e-bullet-range-collection>
      <e-bullet-range end="35" color="red"></e-bullet-range>
      <e-bullet-range end="50" color="blue"></e-bullet-range>
      <e-bullet-range end="100" color="green"></e-bullet-range>
    </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 55, target: 75, category: "Year 1" }],
      minimum: 0, maximum: 100, interval: 20
    }
  }
}
</script>
```

{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs25" %}

### Actual bar customization

#### Border customization

Using the [valueBorder](#) property of the bullet chart, you can customize the border [color](#) and [width](#) of the actual bar.

#### APP.VUE

```
<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
```

```

        targetField="target"
        :minimum="minimum"
        :maximum="maximum"
        :interval="interval"
        title="Sales Rate"
        categoryField="category"
        :valueBorder="valueBorder"
      >
      <e-bullet-range-collection>
        <e-bullet-range end="35" color="red"></e-bullet-range>
        <e-bullet-range end="50" color="blue"></e-bullet-range>
        <e-bullet-range end="100" color="green"></e-bullet-range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 55, target: 75, category: "Year 1" }],
      minimum: 0, maximum: 100, interval: 20, valueBorder: {
        color: "red", width: 3
      }
    }
  }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs26" %}

#### Fill color and height customization

Customize the fill color and height of the actual bar using the [valueFill](#) and [valueHeight](#) properties of the bullet chart. Also, you can bind the color for the actual bar from [dataSource](#) for the bullet chart using [valueFill](#) property.

#### APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Sales Rate"
      categoryField="category"
      valueFill="color"
    >
    <e-bullet-range-collection>

```

```

        <e-bullet-range end="35" color="red"></e-bullet-range>
        <e-bullet-range end="50" color="blue"></e-bullet-range>
        <e-bullet-range end="100" color="green"></e-bullet-range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 55, target: 75, category: "Year 1", color: "blue" }],
      minimum: 0, maximum: 100, interval: 20
    }
  }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs27"  
 %}

### Comparative bar in Vue Bullet chart component

The line marker that runs perpendicular to the orientation of the graph is known as the **Comparative Measure** and it is used as a target marker to compare against the feature measure value. This is also called as the **Target Bar** in the Bullet Chart. To display the target bar, the [targetField](#) should be mapped to the appropriate field from the datasource.

#### APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Sales Rate"
    >
      <e-bullet-range-collection>
        <e-bullet-range end="35" color="red"></e-bullet-range>
        <e-bullet-range end="50" color="blue"></e-bullet-range>
        <e-bullet-range end="100" color="green"></e-bullet-range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {

```

```

data () {
  return {
    data: [{ value: 55, target: 75 }],
    minimum: 0, maximum: 100, interval: 20
  }
}
}
</script>

```

```

{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs5"
%}

```

### Types of target bar

The shape of the target bar can be customized using the [targetTypes](#) property and it supports **Circle**, **Cross**, and **Rect** shapes. The default type of the target bar is **Rect**.

### APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Sales Rate"
      :targetTypes="targetTypes"
      :animation="animation"
    >
      <e-bullet-range-collection>
        <e-bullet-range end="35" color="red"></e-bullet-range>
        <e-bullet-range end="50" color="blue"></e-bullet-range>
        <e-bullet-range end="100" color="green"></e-bullet-range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 55, target: 75 }],
      minimum: 0, maximum: 100, interval: 20, targetTypes: ["Circle"],
      animation: { enable: false }
    }
  }
}
</script>

```

```
{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs6"
%}
```

### Target bar customization

The following properties can be used to customize the target bar. Also, you can bind the color for the target bar from [dataSource](#) for the bullet chart.

- [targetColor](#) - Specifies the fill color of target bar.
- [targetWidth](#) - Specifies the width of target bar.

### APP.VUE

```
<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Sales Rate"
      targetColor="color"
      targetWidth=15
    >
      <e-bullet-range-collection>
        <e-bullet-range end="35" color="red"></e-bullet-range>
        <e-bullet-range end="50" color="blue"></e-bullet-range>
        <e-bullet-range end="100" color="green"></e-bullet-range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 55, target: 75, color: 'red' }],
      minimum: 0, maximum: 100, interval: 20
    }
  }
}
</script>
```

```
{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs7"
%}
```

### Title in Vue Bullet chart component

#### Title

The title of the Bullet Chart displays the information about the data plotted by specifying it in the [title](#) property.

**APP.VUE**

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Sales Rate"
    >
      <e-bullet-range-collection>
        <e-bullet-range end="35" color="red"></e-bullet-range>
        <e-bullet-range end="50" color="blue"></e-bullet-range>
        <e-bullet-range end="100" color="green"></e-bullet-range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 55, target: 75 }],
      minimum: 0, maximum: 100, interval: 20
    }
  }
}
</script>

```

```
{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs15"
%}
```

**Subtitle**

To show additional information about the data plotted, the Bullet Chart can also be given a subtitle using the [subtitle](#) property.

**APP.VUE**

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Sales Rate in dollars"
      labelFormat="{value}"
      subtitle="(in dollars $)"
    >

```

```

    >
    <e-bullet-range-collection>
      <e-bullet-range end="35" color="red"></e-bullet-range>
      <e-bullet-range end="50" color="blue"></e-bullet-range>
      <e-bullet-range end="100" color="green"></e-bullet-range>
    </e-bullet-range-collection>
  </ejs-bulletchart>
</div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 55, target: 45 }],
      minimum: 0, maximum: 100, interval: 20
    }
  }
}
</script>

```

```
{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs16" %}
```

### Title and SubTitle Position

The title and the subtitle positions can be customized using the [titlePosition](#) property. Possible positions are **Left**, **Right**, **Top**, and **Bottom**.

#### Position as Left

By setting the [titlePosition](#) to **Left**, you can display the title and subtitle at the left side of the Bullet Chart.

### APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Sales Rate in dollars"
      titlePosition="Left"
      labelFormat="{value}"
      subtitle="(in dollars $)"
    >
    <e-bullet-range-collection>
      <e-bullet-range end="35" color="red"></e-bullet-range>
      <e-bullet-range end="50" color="blue"></e-bullet-range>
      <e-bullet-range end="100" color="green"></e-bullet-range>
    </e-bullet-range-collection>
  </ejs-bulletchart>

```

```

</div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 55, target: 45 }],
      minimum: 0, maximum: 100, interval: 20
    }
  }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs17"  
 %}

### Position as Right

By setting the [titlePosition](#) to **Right**, you can display the title and subtitle at the right side of the Bullet Chart.

### APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Sales Rate in dollars"
      titlePosition="Right"
      labelFormat="{value}"
      subtitle="(in dollars $)"
    >
      <e-bullet-range-collection>
        <e-bullet-range end="35" color="red"></e-bullet-range>
        <e-bullet-range end="50" color="blue"></e-bullet-range>
        <e-bullet-range end="100" color="green"></e-bullet-range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 55, target: 45 }],
      minimum: 0, maximum: 100, interval: 20
    }
  }
}

```

```

    }
  }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs18" %}

### Position as Top

By setting the [titlePosition](#) to **Top**, you can display the title and subtitle at the top of the Bullet Chart. The default title and subtitle positions of the Bullet Chart is **Top**.

### APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Sales Rate in dollars"
      titlePosition="Top"
      labelFormat="{value}"
      subtitle="(in dollars $)"
    >
      <e-bullet-range-collection>
        <e-bullet-range end="35" color="red"></e-bullet-range>
        <e-bullet-range end="50" color="blue"></e-bullet-range>
        <e-bullet-range end="100" color="green"></e-bullet-range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 55, target: 45 }],
      minimum: 0, maximum: 100, interval: 20
    }
  }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs19" %}

*Position as Bottom*

By setting the [titlePosition](#) to **Bottom**, you can display the title and subtitle at the bottom of the Bullet Chart.

**APP.VUE**

```
<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Sales Rate in dollars"
      titlePosition="Bottom"
      labelFormat="{value}"
      subtitle="(in dollars $)"
    >
      <e-bullet-range-collection>
        <e-bullet-range end="35" color="red"></e-bullet-range>
        <e-bullet-range end="50" color="blue"></e-bullet-range>
        <e-bullet-range end="100" color="green"></e-bullet-range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 55, target: 45 }],
      minimum: 0, maximum: 100, interval: 20
    }
  }
}
</script>
```

```
{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs20"
%}
```

*Title Customization*

The title color, opacity, font size, font family, font weight, and font style can be customized using the [titleStyle](#) property.

**APP.VUE**

```
<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
```

```

        targetField="target"
        :minimum="minimum"
        :maximum="maximum"
        :interval="interval"
        title="Sales Rate in dollars"
        labelFormat="{value}"
        :titleStyle="titleStyle"
        subtitle="(in dollars $)"
      >
      <e-bullet-range-collection>
        <e-bullet-range end="35" color="red"></e-bullet-range>
        <e-bullet-range end="50" color="blue"></e-bullet-range>
        <e-bullet-range end="100" color="green"></e-bullet-range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 55, target: 45 }],
      minimum: 0, maximum: 100, interval: 20,
      titleStyle: { size: '22px', color: 'red', fontFamily: 'cursive',
fontWeight: 'Bold' }
    }
  }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs21"  
 %}

### SubTitle Customization

The sub-title color, opacity, font size, font family, font weight, and font style can be customized using the [subtitleStyle](#) property.

### APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Sales Rate in dollars"
      labelFormat="{value}"
      subtitle="(in dollars $)"
      :subtitleStyle="subtitleStyle"
    >

```

```

    <e-bullet-range-collection>
      <e-bullet-range end="35" color="red"></e-bullet-range>
      <e-bullet-range end="50" color="blue"></e-bullet-range>
      <e-bullet-range end="100" color="green"></e-bullet-range>
    </e-bullet-range-collection>
  </ejs-bulletchart>
</div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 55, target: 45 }],
      minimum: 0, maximum: 100, interval: 20,
      subtitleStyle: { size: '22px', color: 'red', fontFamily: 'cursive',
fontWeight: 'Bold' }
    }
  }
}
</script>

```

```
{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs22" %}
```

## Customization in Vue Bullet chart component

### Orientation

The Bullet Chart can be rendered in different orientations such as **Horizontal** or **Vertical** via the [orientation](#) property. By default, the Bullet Chart is rendered in the **Horizontal** orientation.

### APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Sales Rate in dollars"
      labelFormat="{value}"
      subtitle="(in dollars $)"
      orientation="vertical"
      :animation="animation"
      width="20%"
    >
    <e-bullet-range-collection>
      <e-bullet-range end="35" color="red"></e-bullet-range>
      <e-bullet-range end="50" color="blue"></e-bullet-range>
      <e-bullet-range end="100" color="green"></e-bullet-range>
    </e-bullet-range-collection>
  </div>
</template>

```

```

    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 55, target: 45 }], label: '${value}',
      minimum: 0, maximum: 100, interval: 20, animation: { enable: false }
    }
  }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs8"  
 %}

### Right-to-left (RTL)

The Bullet Chart supports the right-to-left rendering that can be enabled by setting the [enableRtl](#) property to **true**.

### APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Sales Rate"
      enableRtl="true"
    >
      <e-bullet-range-collection>
        <e-bullet-range end="500" color="red"></e-bullet-range>
        <e-bullet-range end="1500" color="blue"></e-bullet-range>
        <e-bullet-range end="2000" color="green"></e-bullet-range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 1500, target: 1000 }],
      minimum: 0, maximum: 2000, interval: 200
    }
  }
}

```

```

    }
  }
</script>

```

```
{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs9"
%}
```

### Animation

The actual and the target bar supports the linear animation via the [animation](#) setting. The speed and the delay are controlled using the `duration` and `delay` properties respectively.

### APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Sales Rate"
      :animation="animation"
    >
    <e-bullet-range-collection>
      <e-bullet-range end="500" color="red"></e-bullet-range>
      <e-bullet-range end="1500" color="blue"></e-bullet-range>
      <e-bullet-range end="2000" color="green"></e-bullet-range>
    </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 1500, target: 1000 }],
      minimum: 0, maximum: 2000, interval: 200,
      animation: { enable: true }
    }
  }
}
</script>

```

```
{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs10"
%}
```

### Theme

The Bullet Chart supports different type of themes via the [theme](#) property.

### APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="target"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Profit in %"
      :theme="theme"
    >
    <e-bullet-range-collection>
      <e-bullet-range end="15" color="red"></e-bullet-range>
      <e-bullet-range end="50" color="blue"></e-bullet-range>
      <e-bullet-range end="100" color="green"></e-bullet-range>
    </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 50, target: 45 }],
      minimum: 0, maximum: 100, interval: 10, theme: "HighContrast"
    }
  }
}
</script>

```

{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs11"%}

### Data label in Vue Bullet chart component

Data Labels are used to identify the value of actual bar in the Bullet Chart component. The Data Labels will be shown by specifying the [dataLabel](#) setting's [enable](#) property to **true**.

#### APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="comparativeMeasureValue"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Profit in %"
      labelFormat="{value}%"
      :dataLabel="dataLabel"
      height="400px"
    >

```

```

    >
    <e-bullet-range-collection>
      <e-bullet-range end="5" color="red"></e-bullet-range>
      <e-bullet-range end="15" color="blue"></e-bullet-range>
      <e-bullet-range end="20" color="green"></e-bullet-range>
    </e-bullet-range-collection>
  </ejs-bulletchart>
</div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 5, comparativeMeasureValue: 7.5, category: '2001' },
        { value: 7, comparativeMeasureValue: 5, category: '2002' },
        { value: 10, comparativeMeasureValue: 6, category: '2003' },
        { value: 5, comparativeMeasureValue: 8, category: '2004' },
        { value: 12, comparativeMeasureValue: 5, category: '2005' },
        { value: 8, comparativeMeasureValue: 6, category: '2006' }
      ],
      minimum: 0, maximum: 20, interval: 5, dataLabel: { visible: true }
    }
  }
}
</script>

```

```
{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs13"
%}
```

### Data Label Customization

Data Labels color, opacity, font size, font family, font weight, and font style can be customized using the [labelStyle](#).

### APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="comparativeMeasureValue"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Profit in %"
      labelFormat="{value}%"
      :dataLabel="dataLabel"
      height="400px"
    >
    <e-bullet-range-collection>
      <e-bullet-range end="5" color="red"></e-bullet-range>
      <e-bullet-range end="15" color="blue"></e-bullet-range>
      <e-bullet-range end="20" color="green"></e-bullet-range>
    </e-bullet-range-collection>
  </div>
</template>

```

```

        </e-bullet-range-collection>
      </ejs-bulletchart>
    </div>
  </template>
  <script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 5, comparativeMeasureValue: 7.5, category: '2001' },
        { value: 7, comparativeMeasureValue: 5, category: '2002' },
        { value: 10, comparativeMeasureValue: 6, category: '2003' },
        { value: 5, comparativeMeasureValue: 8, category: '2004' },
        { value: 12, comparativeMeasureValue: 5, category: '2005' },
        { value: 8, comparativeMeasureValue: 6, category: '2006' }
      ],
      minimum: 0, maximum: 20, interval: 5,
      dataLabel: { enable: true, labelStyle: { color: "yellow", size: "20" }
    }
  }
}
  </script>

```

```
{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs14" %}
```

### Tool tip in Vue Bullet chart component

When the mouse is hovered over a bar in the Bullet Chart, the tooltip displays important summary about the actual and the target bar values.

#### Default Tooltip

The tooltip is not visible by default. To make it visible, set the [enable](#) property in the [tooltip](#) to **true** and injecting **BulletTooltip** module using **BulletChart.Inject(BulletTooltip)** and injecting **BulletTooltip** module using **BulletChart.Inject(BulletTooltip)**.

#### APP.VUE

```

<template>
  <div>
    <ejs-bulletchart id="bulletChart"
      :dataSource="data"
      valueField="value"
      targetField="comparativeMeasureValue"
      :minimum="minimum"
      :maximum="maximum"
      :interval="interval"
      title="Profit in %"
      height="400px"
    >
    <e-bullet-range-collection>
      <e-bullet-range end="5" color="red"></e-bullet-range>
      <e-bullet-range end="15" color="blue"></e-bullet-range>
    </e-bullet-range-collection>
  </div>
</template>

```

```

        <e-bullet-range end="20" color="green"></e-bullet-range>
      </e-bullet-range-collection>
    </ejs-bulletchart>
  </div>
</template>
<script>
import Vue from 'vue';
import { BulletChartPlugin } from '@syncfusion/ej2-vue-charts';
Vue.use(BulletChartPlugin);
export default {
  data () {
    return {
      data: [{ value: 5, comparativeMeasureValue: 7.5, category: '2001' },
        { value: 7, comparativeMeasureValue: 5, category: '2002' },
        { value: 10, comparativeMeasureValue: 6, category: '2003' },
        { value: 5, comparativeMeasureValue: 8, category: '2004' },
        { value: 12, comparativeMeasureValue: 5, category: '2005' },
        { value: 8, comparativeMeasureValue: 6, category: '2006' }
      ],
      minimum: 0, maximum: 20, interval: 5
    }
  }
}
</script>

```

```
{% previewsample "page.domainurl/code-snippet/bullet-chart/bullet-chart-dimensions/container-cs23"
%}
```

### Tooltip Template

Any HTML elements can be displayed in the tooltip by using the [template](#) property of the [tooltip](#). You can use the `#{target}` and `#{value}` as place holders in the HTML element to display the value and target values from the data source of corresponding data point.

### Customize the Appearance of Tooltip

#### Tooltip Customization

The following properties can be used to customize the Bullet Chart tooltip.

- [fill](#) - Specifies the color of tooltip.
- [border](#) - Specifies the tooltip border color and width.
- [textStyle](#) - Specifies the tooltip font family, font style, font weight, color and size.

### Accessibility in Vue Bullet chart component

The Bullet chart component followed the accessibility guidelines and standards, including [ADA, Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the Bullet chart component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2](#) Support |  alt="Yes" |

```

| Section 508 Support |  |

| Screen Reader Support |  |

| Right-To-Left Support |  |

| Color Contrast |  |

| Mobile Device Support |  |

| Keyboard Navigation Support |  |

| Accessibility Checker Validation |  |

| Axe-core Accessibility Validation |  |

<style>

.post .post-content img {
display: inline-block;
margin: 0.5em 0;
}

</style>

<div> - All
features of the component meet the requirement.</div>

<div> - Some features of the component do not meet the requirement.</div>

<div> - The component does not meet the requirement.</div>

```

#### WAI-ARIA attributes

The Bullet chart component followed the [WAI-ARIA](#) patterns to meet the accessibility. The following ARIA attributes are used in the Bullet chart component:

- `img (role)`
- `button (role)`
- `aria-label (attribute)`
- `aria-pressed (attribute)`

### Keyboard interaction

The Bullet chart component followed the [keyboard interaction](#) guideline, making it easy for people who use assistive technologies (AT) and those who completely rely on keyboard navigation. The following keyboard shortcuts are supported by the Bullet chart component.

| **Press** | **To do this** |

| --- | --- |

| **Tab** | Moves the focus to the next element in the Bullet chart. |

| **Shift + Tab** | Moves the focus to the previous element in the Bullet chart. |

| **Ctrl + P** | Prints the Bullet chart. |

### Ensuring accessibility

The Bullet chart component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Bullet chart component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Bullet chart component with accessibility tools.

```
{% previewsample "https://ej2.syncfusion.com/accessibility/bullet-chart.html" %}
```

## ButtonGroup

### Getting Started with the Vue Button group Component in Vue 2

This article provides a step-by-step guide for setting up a Vue 2 project using [Vue-CLI](#) and integrating the Syncfusion Vue Button group component using the [Composition API](#) / [Options API](#).

#### Prerequisites

[System requirements for Syncfusion Vue UI components](#)

#### Dependencies

The list of dependencies required to use the Button component in your application is given below:

```
`js
|-- @syncfusion/ej2-vue-splitbuttons
|-- @syncfusion/ej2-base
|-- @syncfusion/ej2-buttons
|-- @syncfusion/ej2-vue-base
`,`
```

#### Setting up the Vue 2 project

To generate a Vue 2 project using Vue-CLI, use the [vue create](#) command. Follow these steps to install Vue CLI and create a new project:

```
`bash
```

```
npm install -g @vue/cli
```

```
vue create quickstart
```

```
cd quickstart
```

```
npm run serve
```

```
,
```

```
or
```

```
`bash
```

```
yarn global add @vue/cli
```

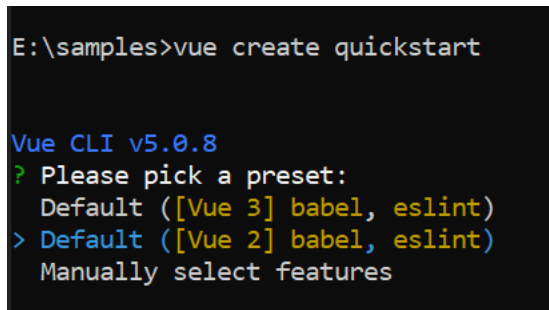

```
vue create quickstart
```

```
cd quickstart
```

```
yarn run serve
```

```
,
```

When creating a new project, choose the option `Default ([Vue 2] babel, eslint)` from the menu.

```
E:\samples>vue create quickstart

Vue CLI v5.0.8
? Please pick a preset:
  Default ([Vue 3] babel, eslint)
> Default ([Vue 2] babel, eslint)
  Manually select features
```

Once the `quickstart` project is set up with default settings, proceed to add Syncfusion components to the project.

#### Add Syncfusion Vue packages

Syncfusion packages are available at [npmjs.com](https://www.npmjs.com). To use Vue components, install the required npm package.

This article uses the [Vue Button group component](#) as an example. Install the `@syncfusion/ej2-splitbuttons` package by running the following command:

```
`bash
```

```
npm install @syncfusion/ej2-vue-splitbuttons --save
```

```
,
```

```
or
```

```
`bash
```

```
yarn add @syncfusion/ej2-vue-splitbuttons
```

```
,
```

### Import Syncfusion CSS styles

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, [CRG](#) and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to themes in a Vue project.

In this article, the **Material** theme is applied using CSS styles, which are available in installed packages. The necessary Material CSS styles for the Button group component and its dependents were imported into the `<style>` section of **src/App.vue** file.

#### ~/SRC/APP.VUE

```
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
@import "../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css";
</style>
```

### Add Syncfusion Vue component

Follow the below steps to add the Vue Button group component using **Composition API** or **Options API**:

1\ First, import and register the Button group component in the **script** section of the **src/App.vue** file. If you are using the **Composition API**, you should add the **setup** attribute to the **script** tag to indicate that Vue will be using the **Composition API**.

#### COMPOSITION API (~/SRC/APP.VUE)

```
<script setup>
import { ButtonComponent as EjsButton } from '@syncfusion/ej2-vue-buttons';
</script>
```

#### OPTIONS API (~/SRC/APP.VUE)

```
<script>
import { ButtonComponent } from '@syncfusion/ej2-vue-buttons';
export default {
  components: {
    'ejs-button': ButtonComponent
  }
}
</script>
```

### Creating Vue Sample

Add a div element with class name as **e-btn-group** and add the button elements that needs to be group inside the **div** element in **App.vue** file.

To render button elements as EJ2 Vue Button, then add [Button dependencies](#) in **systemjs.config.js** file. Then import **ButtonPlugin** from **ej2-vue-buttons**.

#### ~/SRC/APP.VUE

```
<template>
```

```
<div id='app'>
  <div class="e-btn-group">
    <ejs-button>HTML</ejs-button>
    <ejs-button>CSS</ejs-button>
    <ejs-button>Javascript</ejs-button>
  </div>
</div>
</template>
```

Here is the summarized code for the above steps in the **src/App.vue** file:

#### **COMPOSITION API (~SRC/APP.VUE)**

```
<template>
  <div id='app'>
    <div class="e-btn-group">
      <ejs-button>HTML</ejs-button>
      <ejs-button>CSS</ejs-button>
      <ejs-button>Javascript</ejs-button>
    </div>
  </div>
</template>
<script setup>
import { ButtonComponent as EjsButton } from '@syncfusion/ej2-vue-buttons';
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
@import "../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css";
#app {
  margin: 20px;
}
.e-btn-group {
  margin: 25px 5px 20px 20px;
}
</style>
```

#### **OPTIONS API (~SRC/APP.VUE)**

```
<template>
  <div id='app'>
    <div class="e-btn-group">
      <ejs-button>HTML</ejs-button>
      <ejs-button>CSS</ejs-button>
      <ejs-button>Javascript</ejs-button>
    </div>
  </div>
</template>
<script>
import { ButtonComponent } from '@syncfusion/ej2-vue-buttons';
export default {
  components: {
    'ejs-button': ButtonComponent
  },
  name: 'app'
}
```

```

}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
@import "../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css";
#app {
  margin: 20px;
}
.e-btn-group {
  margin: 25px 5px 20px 20px;
}
</style>

```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run serve
```

```
`
```

or

```
`bash
```

```
yarn run serve
```

```
`
```

```
{% previewsample "page.domainurl/code-snippet/button-group/getting-started-cs2" %}
```

### Orientation

ButtonGroup can be arranged in vertical and horizontal orientation. By default, it is horizontally aligned.

#### Vertical Orientation

ButtonGroup can be aligned vertically using the built-in CSS class `e-vertical` to the target element.

The following example illustrates how to achieve vertical orientation in ButtonGroup,

#### COMPOSITION API (~SRC/APP.VUE)

```

<template>
  <div id='app'>
    <div class="e-btn-group e-vertical">
      <ejs-button >HTML</ejs-button>
      <ejs-button >CSS</ejs-button>
      <ejs-button >Javascript</ejs-button>
    </div>
  </div>
</template>
<script setup>
import { ButtonComponent as EjsButton } from '@syncfusion/ej2-vue-buttons';
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";

```

```
@import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
@import "../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css";
#app {
  margin: 20px;
}
.e-btn-group {
  margin: 25px 5px 20px 20px;
}
</style>
```

### OPTIONS API (~SRC/APP.VUE)

```
<template>
  <div id='app'>
    <div class="e-btn-group e-vertical">
      <ejs-button >HTML</ejs-button>
      <ejs-button >CSS</ejs-button>
      <ejs-button >Javascript</ejs-button>
    </div>
  </div>
</template>
<script>
import { ButtonComponent } from '@syncfusion/ej2-vue-buttons';
export default {
  components: {
    'ejs-button': ButtonComponent
  },
  name: 'app'
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
@import "../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css";
#app {
  margin: 20px;
}
.e-btn-group {
  margin: 25px 5px 20px 20px;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/button-group/getting-started-cs3" %}

ButtonGroup with SplitButton component nesting won't work in vertical orientation.

### Getting Started with the Vue ButtonGroup Component in Vue 3

This article provides a step-by-step guide for setting up a [Vite](#) project with a JavaScript environment and integrating the Syncfusion Vue ButtonGroup component using the [Composition API](#) / [Options API](#).

The **Composition API** is a new feature introduced in Vue.js 3 that provides an alternative way to organize and reuse component logic. It allows developers to write components as functions that use smaller, reusable functions called composition functions to manage their properties and behavior.

The **Options API** is the traditional way of writing Vue.js components, where the component logic is organized into a series of options that define the component's properties and behavior. These options include data, methods, computed properties, watchers, lifecycle hooks, and more.

#### Prerequisites

##### [System requirements for Syncfusion Vue UI components](#)

#### Set up the Vite project

A recommended approach for beginning with Vue is to scaffold a project using [Vite](#). To create a new Vite project, use one of the commands that are specific to either NPM or Yarn.

```
`bash
```

```
npm create vite@latest
```

```
,
```

or

```
`bash
```

```
yarn create vite
```

```
,
```

Using one of the above commands will lead you to set up additional configurations for the project as below:

1. Define the project name: We can specify the name of the project directly. Let's specify the name of the project as **my-project** for this article.

```
`bash
```

```
? Project name: » my-project
```

```
,
```

2. Select **Vue** as the framework. It will create a Vue 3 project.

```
`bash
```

```
? Select a framework: » - Use arrow-keys. Return to submit.
```

```
Vanilla
```

```
Vue
```

```
React
```

```
Preact
```

```
Lit
```

```
Svelte
```

```
Others
```

```
,
```

3. Choose `JavaScript` as the framework variant to build this Vite project using JavaScript and Vue.

```
`bash
```

? Select a variant: » - Use arrow-keys. Return to submit.

JavaScript

TypeScript

Customize with create-vue ↗

Nuxt ↗

,

4. Upon completing the aforementioned steps to create the `my-project`, run the following command to install its dependencies:

```
`bash
```

```
cd my-project
```

```
npm install
```

,

or

```
`bash
```

```
cd my-project
```

```
yarn install
```

,

Now that `my-project` is ready to run with default settings, let's add Syncfusion components to the project.

#### Add Syncfusion Vue packages

Syncfusion Vue component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion Vue components in the project, install the corresponding npm package.

This article uses the [Vue ButtonGroup component](#) as an example. To use the Vue ButtonGroup component in the project, the `@syncfusion/ej2-vue-buttons` package needs to be installed using the following command:

```
`bash
```

```
npm install @syncfusion/ej2-vue-buttons --save
```

,

or

```
`bash
```

```
yarn add @syncfusion/ej2-vue-buttons
```

,

### Import Syncfusion CSS styles

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, [CRG](#) and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to themes in a Vue project.

In this article, **Material** theme is applied using CSS styles, which are available in installed packages. The necessary **Material** CSS styles for the Button component and its dependents were imported into the `<style>` section of **src/App.vue** file.

#### ~/SRC/APP.VUE

```
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-buttons/styles/material.css";
</style>
```

The order of importing CSS styles should be in line with its dependency graph.

### Add Syncfusion Vue component

Follow the below steps to add the Vue ButtonGroup component using **Composition API** or **Options API**:

1.First, import and register the ButtonGroup component and its child directives in the **script** section of the **src/App.vue** file. If you are using the **Composition API**, you should add the **setup** attribute to the **script** tag to indicate that Vue will be using the **Composition API**.

#### COMPOSITION API (~/SRC/APP.VUE)

```
<script setup>
import { ButtonComponent as EjsButton } from "@syncfusion/ej2-vue-buttons";
</script>
```

#### OPTIONS API (~/SRC/APP.VUE)

```
<script>
import { ButtonComponent } from "@syncfusion/ej2-vue-buttons";
//Component registration
export default {
  name: "App",
  components: {
    "ejs-button": ButtonComponent
  }
}
</script>
```

2.In the **template** section, define the ButtonGroup component.

#### ~/SRC/APP.VUE

```
<template>
<div id='app'>
<div class="e-btn-group">
<ejs-button>HTML</ejs-button>
<ejs-button>CSS</ejs-button>
</div>
</div>
</template>
```

```
<ejs-button>Javascript</ejs-button>
</div>
</div>
</template>
```

3. Here is the summarized code for the above steps in the **src/App.vue** file:

#### **COMPOSITION API (~SRC/APP.VUE)**

```
<template>
<div id='app'>
<div class="e-btn-group">
<ejs-button>HTML</ejs-button>
<ejs-button>CSS</ejs-button>
<ejs-button>Javascript</ejs-button>
</div>
</div>
</template>
<script setup>
import { ButtonComponent as EjsButton } from "@syncfusion/ej2-vue-buttons";
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-buttons/styles/material.css";
</style>
```

#### **OPTIONS API (~SRC/APP.VUE)**

```
<template>
<div id='app'>
<div class="e-btn-group">
<ejs-button>HTML</ejs-button>
<ejs-button>CSS</ejs-button>
<ejs-button>Javascript</ejs-button>
</div>
</div>
</template>
<script>
import { ButtonComponent } from '@syncfusion/ej2-vue-buttons';
//Component registration
export default {
name: "App",
components: {
"ejs-button": ButtonComponent
},
data() {
return {
};
}
}
</script>
```

#### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run dev
```

```
,
```

```
or
```

```
`bash
```

```
yarn run dev
```

```
,
```

The output will appear as follows:

A screenshot showing three buttons arranged horizontally. The first button is labeled 'HTML', the second 'CSS', and the third 'JAVASCRIPT'. They are all in a light gray box with rounded corners.

**Sample:** [vue-3-button-group-getting-started](#).

For migrating from Vue 2 to Vue 3, refer to the [migration](#) documentation.

See also

- [Getting Started with Vue UI Components using Options API and TypeScript](#)

## Types and styles in Vue Button group component

This section explains about different types and styles of ButtonGroup.

### ButtonGroup types

#### *Outline ButtonGroup*

An Outline ButtonGroup has a border with transparent background. To create Outline ButtonGroup, `e-outline` class needs to be added to the target element and to the button element using [cssClass](#) property.

The following sample illustrates how to achieve outline ButtonGroup,

#### **APP.VUE**

```
<template>
  <div id='app'>
    <div class="e-btn-group e-outline">
      <ejs-button cssClass='e-outline'>HTML</ejs-button>
      <ejs-button cssClass='e-outline' >CSS</ejs-button>
      <ejs-button cssClass='e-outline' >Javascript</ejs-button>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
Vue.use(ButtonPlugin);
export default {
  name: 'app'
```

```

}
</script>
<style>
  @import '../node_modules/@syncfusion/ej2-base/styles/material.css';
  @import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
  @import '../node_modules/@syncfusion/ej2-popups/styles/material.css';
  @import '../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css';
  #app {
    margin: 20px;
  }
  .e-btn-group {
    margin: 25px 5px 20px 20px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/button-group/getting-started-cs16" %}

ButtonGroup does not have support for **flat** and **round** types.

### ButtonGroup styles

The Essential JS 2 ButtonGroup has the following predefined styles. This can be achieved by adding corresponding class name in each button elements using **cssClass** property.

Class	Description
-----	-----
e-primary	Used to represent a primary action.
e-success	Used to represent a positive action.
e-info	Used to represent an informative action.
e-warning	Used to represent an action with caution.
e-danger	Used to represent a negative action.

The following example illustrates how to achieve predefined styles in ButtonGroup,

### APP.VUE

```

<template>
  <div id='app'>
    <div class="e-btn-group">
      <ejs-button cssClass='e-info'>View</ejs-button>
      <ejs-button>Edit</ejs-button>
      <ejs-button cssClass='e-danger'>Delete</ejs-button>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
Vue.use(ButtonPlugin);
export default {
  name: 'app'
}

```

```

</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
@import '../node_modules/@syncfusion/ej2-popups/styles/material.css';
@import '../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css';
#app {
  margin: 20px;
}
.e-btn-group {
  margin: 25px 5px 20px 20px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/button-group/getting-started-cs17" %}

See Also

- [ButtonGroup with icons](#)
- [Create ButtonGroup with rounded corner](#)

## Selection and nesting in Vue Button group component

### Selection

#### Single selection

ButtonGroup supports radio type selection in which only one button can be selected. This can be achieved by adding input element along with `id` attribute with its corresponding label along with `for` attribute inside the target element. In this ButtonGroup, the type of the input element should be `radio` and `e-btn` is added to the `label` element.

The following example illustrates the single selection behavior in ButtonGroup,

#### APP.VUE

```

<template>
  <div id='app'>
    <div class='e-btn-group'>
      <input type="radio" id="radioleft" name="align" value="left"/>
      <label class="e-btn" for="radioleft">Left</label>
      <input type="radio" id="radiomiddle" name="align" value="middle"/>
      <label class="e-btn" for="radiomiddle">Center</label>
      <input type="radio" id="radiatoright" name="align" value="right"/>
      <label class="e-btn" for="radiatoright">Right</label>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
export default {
  name: 'app'
}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';

```

```
@import '../node_modules/@syncfusion/ej2-popups/styles/material.css';
@import '../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css';
#app {
  margin: 20px;
}
.e-btn-group {
  margin: 25px 5px 20px 20px;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/button-group/getting-started-cs12" %}

### Multiple selection

ButtonGroup supports checkbox type selection in which multiple button can be selected. This can be achieved by adding input element with its corresponding label. In this ButtonGroup, the type of the input element should be `checkbox` and `e-btn` is added to the `label` element.

The following example illustrates the multiple selection behavior in ButtonGroup,

### APP.VUE

```
<template>
  <div id='app'>
    <div class='e-btn-group'>
      <input type="checkbox" id="checkbold" name="font" value="bold"/>
      <label class="e-btn" for="checkbold">Bold</label>
      <input type="checkbox" id="checkitalic" name="font" value="italic" />
    </div>
    <label class="e-btn" for="checkitalic">Italic</label>
    <input type="checkbox" id="checkline" name="font" value="underline"/>
    <label class="e-btn" for="checkline">Underline</label>
  </div>
</template>
<script>
import Vue from 'vue';
export default {
  name: 'app'
}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
@import '../node_modules/@syncfusion/ej2-popups/styles/material.css';
@import '../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css';
#app {
  margin: 20px;
}
.e-btn-group {
  margin: 25px 5px 20px 20px;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/button-group/getting-started-cs13" %}

### Nesting

Nesting with other components can be possible in ButtonGroup. The following components can be nested in ButtonGroup.

- DropDownButton
- SplitButton

For nesting support, [SplitButton dependencies](#) should be configured and it should be added in `system.config.js`.

#### DropDownButton

To initialize DropDownButton component refer [DropDownButton Getting Started documentation](#).

In the following example, DropDownButton component is added by importing `DropDownButtonPlugin` from `ej2-vue-splitbuttons`.

#### APP.VUE

```
<template>
  <div id='app'>
    <div class="e-btn-group">
      <div class='e-btn-group'>
        <ejs-button >HTML</ejs-button>
        <ejs-button >CSS</ejs-button>
        <ejs-button >Javascript</ejs-button>
        <ejs-dropdownbutton :items='items'>More</ejs-dropdownbutton>
      </div>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
import { DropDownButtonPlugin } from "@syncfusion/ej2-vue-splitbuttons";
Vue.use(ButtonPlugin);
Vue.use(DropDownButtonPlugin);
export default {
  name: 'app',
  data () {
    return {
      items:[
        {
          text: 'Learn SQL'
        },
        {
          text: 'Learn PHP'
        },
        {
          text: 'Learn Bootstrap'
        }
      ]
    };
  }
}
</script>
<style>
```

```
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
@import '../node_modules/@syncfusion/ej2-popups/styles/material.css';
@import '../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css';
#app {
  margin: 20px;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/button-group/getting-started-cs14" %}

### SplitButton

To initialize SplitButton component refer [SplitButton Getting Started documentation](#).

In the following example, SplitButton component is added by importing SplitButtonPlugin from ej2-vue-splitbuttons.

### APP.VUE

```
<template>
  <div id='app'>
    <div class="e-btn-group e-vertical">
      <div class='e-btn-group'>
        <ejs-button content='Cut'></ejs-button>
        <ejs-button content='Copy'></ejs-button>
        <ejs-splitbutton :items='items' content='Paste'></ejs-splitbutton>
      </div>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
import { SplitButtonPlugin } from "@syncfusion/ej2-vue-splitbuttons";
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
Vue.use(ButtonPlugin);
Vue.use(SplitButtonPlugin );
export default {
  name: 'app',
  data () {
    return {
      items:[
        {
          text: 'Paste'
        },
        {
          text: 'Paste Text'
        },
        {
          text: 'Paste Special'
        }
      ]
    };
  }
}
</script>
<style>
```

```
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
@import '../node_modules/@syncfusion/ej2-popups/styles/material.css';
@import '../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css';
#app {
  margin: 20px;
}
</style>
```

### Accessibility in Vue Button group component

The Button group component followed the accessibility guidelines and standards, including [ADA, Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the Button group component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2](#) Support |  |

| [Section 508](#) Support |  |

| Screen Reader Support |  |

| Right-To-Left Support |  |

| Color Contrast |  |

| Mobile Device Support |  |

| Keyboard Navigation Support |  |

| [Accessibility Checker](#) Validation |  |

| [Axe-core](#) Accessibility Validation |  |

<style>

.post .post-content img {

display: inline-block;

```
margin: 0.5em 0;
```

```
}
```

```
</style>
```

```
<div> - All features of the component meet the requirement.</div>
```

```
<div> - Some features of the component do not meet the requirement.</div>
```

```
<div> - The component does not meet the requirement.</div>
```

### Keyboard interaction

The Button group component followed the [keyboard interaction](#) guideline, making it easy for people who use assistive technologies (AT) and those who completely rely on keyboard navigation. The following keyboard shortcuts are supported by the Button group component.

#### Normal behavior

Press	To do this
---   ---	
Tab	Focuses the next button in the ButtonGroup.
Enter/Space	Activates the focussed button in the ButtonGroup.

#### Checkbox behavior

Press	To do this
---   ---	
Tab	Focuses the next button in the ButtonGroup.
Space	Activates the focussed button in the ButtonGroup.

#### Radiobutton behavior

Press	To do this
---   ---	
Tab	Focuses the active button in the ButtonGroup.
Right	Activates next/previous button in the ButtonGroup.

### Ensuring accessibility

The Button group component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Button group component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Button group component with accessibility tools.

```
{% previewsample "page.domainurl/code-snippet/button-group/getting-started-cs1" %}
```

### Style and appearance in Vue Button group component

To modify the ButtonGroup appearance, you need to override the default CSS of ButtonGroup component. Please find the list of CSS classes and its corresponding section in ButtonGroup. Also, you have an option to create your own custom theme for the controls using our [Theme Studio](#).

#### CSS Class | Purpose of Class

- |.e-btn|To customize the ButtonGroup.
- |.e-btn: hover|To customize the ButtonGroup on hover.
- |.e-btn: focus|To customize the ButtonGroup on focus.
- |.e-btn: active|To customize the ButtonGroup on active.

### How To

#### Create buttongroup with icons in Vue Button group component

To create ButtonGroup with icons, [iconCss](#) property of Button component can be used.

The following example illustrates how to create ButtonGroup with icons,

#### APP.VUE

```
<template>
  <div id='app'>
    <div class="e-btn-group">
      <ejs-button content='Left' iconCss='e-icons e-left-icon'></ejs-
button>
      <ejs-button content='Center' iconCss='e-icons e-middle-icon'></ejs-
button>
      <ejs-button content='Right' iconCss='e-icons e-right-icon'></ejs-
button>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
Vue.use(ButtonPlugin);
export default {
  name: 'app'
}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
@import '../node_modules/@syncfusion/ej2-popups/styles/material.css';
@import '../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css';
#app {
  margin: 20px;
}
.e-btn-group {
  margin: 25px 5px 20px 20px;
}
```

```

    }
    .e-left-icon::before {
      content: '\e33a';
    }
    .e-right-icon::before {
      content: '\e34d';
    }
    .e-middle-icon::before {
      content: '\e35e';
    }
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/button-group/getting-started-cs4" %}

### Create buttongroup with rounded corner in Vue Button group component

The ButtonGroup with rounded corner has round edges on both sides. To ButtonGroup with rounded corner, `e-round-corner` class is to be added to the target element.

The following example illustrates how to create ButtonGroup with rounded corner,

#### APP.VUE

```

<template>
  <div id='app'>
    <div class='e-btn-group e-round-corner'>
      <ejs-button content='HTML'></ejs-button>
      <ejs-button content='CSS'></ejs-button>
      <ejs-button content='Javascript'></ejs-button>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
Vue.use(ButtonPlugin);
export default {
  name: 'app'
}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
@import '../node_modules/@syncfusion/ej2-popups/styles/material.css';
@import '../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css';
#app {
  margin: 20px;
}
.e-btn-group {
  margin: 25px 5px 20px 20px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/button-group/getting-started-cs5" %}

Disable in Vue Button group component

#### Particular button

To disable a particular button in a ButtonGroup, [disabled](#) attribute needs to be added to corresponding button element.

#### Whole ButtonGroup

To disable whole ButtonGroup, [disabled](#) attribute needs to be added to all the button elements.

The following example illustrates how to disable the particular and the whole ButtonGroup.

#### APP.VUE

```
<template>
  <div id='app'>
    <div class='e-btn-group'>
      <ejs-button >HTML</ejs-button>
      <ejs-button disabled='true'>CSS</ejs-button>
      <ejs-button >Javascript</ejs-button>
    </div>
    <div class='e-btn-group'>
      <ejs-button disabled='true'>HTML</ejs-button>
      <ejs-button disabled='true'>CSS</ejs-button>
      <ejs-button disabled='true'>Javascript</ejs-button>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
Vue.use(ButtonPlugin);
export default {
  name: 'app'
}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
@import '../node_modules/@syncfusion/ej2-popups/styles/material.css';
@import '../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css';
#app {
  margin: 20px;
}
.e-btn-group {
  margin: 25px 5px 20px 20px;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/button-group/getting-started-cs6" %}

To disable radio/checkbox type ButtonGroup, the `disabled` attribute should be added to the input element.

### Enable ripple in Vue Button group component

Ripple can be enabled by importing `rippleEffect` method from `ej2-base` and initialize rippleEffect with `.e-btn-group` element and selector as `e-btn`.

The following example illustrates how to enable ripple for ButtonGroup,

#### APP.VUE

```
<template>
  <div id='app'>
    <div class='e-btn-group'>
      <ejs-button>HTML</ejs-button>
      <ejs-button>CSS</ejs-button>
      <ejs-button>Javascript</ejs-button>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
import { enableRipple, rippleEffect } from '@syncfusion/ej2-base';
enableRipple(true);
Vue.use(ButtonPlugin);
export default {
  name: 'app',
  mounted() {
    var button= document.querySelector('.e-btn-group');
    rippleEffect(button, { selector: '.e-btn' });
  }
}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
@import '../node_modules/@syncfusion/ej2-popups/styles/material.css';
@import '../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css';
#app {
  margin: 20px;
}
.e-btn-group {
  margin: 25px 5px 20px 20px;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/button-group/getting-started-cs7" %}

### Enable rtl in Vue Button group component

ButtonGroup supports RTL functionality. This can be achieved by adding `e-rtl` class to the target element.

The following example illustrates how to create ButtonGroup with RTL support.

#### APP.VUE

```
<template>
  <div id='app'>
    <div class='e-btn-group e-rtl'>
```

```

        <ejs-button content='HTML'></ejs-button>
        <ejs-button content='CSS'></ejs-button>
        <ejs-button content='Javascript'></ejs-button>
    </div>
</div>
</template>
<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
Vue.use(ButtonPlugin);
export default {
    name: 'app'
}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
@import '../node_modules/@syncfusion/ej2-popups/styles/material.css';
@import '../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css';
#app {
    margin: 20px;
}
.e-btn-group {
    margin: 25px 5px 20px 20px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/button-group/getting-started-cs8" %}

### Form submit in Vue Button group component

The name attribute of the input element is used to group checkbox/radio type ButtonGroup. When the radio/checkbox type are grouped in form, the checked items value attribute will be post to server on form submit that can be retrieved through the name. The disabled radio/checkbox type value will not be sent to the server on form submit.

In the following code snippet, the radio type ButtonGroup is explained with male value as checked. Now, the value that is in checked state will be sent on form submit.

### APP.VUE

```

<template>
  <div id='app'>
    <form>
      <div class='e-btn-group'>
        <input type="radio" id="male" name="gender" value="male" checked/>
        <label class="e-btn" for="male">Male</label>
        <input type="radio" id="female" name="gender" value="female"/>
        <label class="e-btn" for="female">Female</label>
        <input type="radio" id="transgender" name="gender" value="transgender"/>
        <label class="e-btn" for="transgender">Transgender</label>
      </div>
      <ejs-button isPrimary='true'>Submit</ejs-button>
    </form>
  </div>
</template>

```

```

    </form>
  </div>
</template>
<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
Vue.use(ButtonPlugin);
export default {
  name: 'app'
}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
@import '../node_modules/@syncfusion/ej2-popups/styles/material.css';
@import '../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css';
#app {
  margin: 20px;
}
.e-btn-group, button {
  margin: 20px 5px 20px 20px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/button-group/getting-started-cs9" %}

Initialize buttongroup using util function in Vue Button group component

Though it is a CSS component, for easy initialization of ButtonGroup `createButtonGroup` util function can be used.

To use `createButtonGroup` util function, [SplitButton dependencies](#) should be configured and it should be added in `system.config.js`.

Using `createButtonGroup` method, the Button options, selector, and `cssClass` is passed and the corresponding classes is added to the elements.

#### *For basic ButtonGroup*

To create basic ButtonGroup, the target element along with the button elements needs to be created and `createButtonGroup` is to be imported from `ej2-splitbuttons` package.

#### *For radio type ButtonGroup*

To create a radio type ButtonGroup, the target element along with the input elements should be created with type `radio`.

#### *For checkbox type ButtonGroup*

Checkbox type ButtonGroup creation is similar to radio type ButtonGroup, instead the type of the input elements should be `checkbox`.

The following example illustrates how to create ButtonGroup using `createButtonGroup` function for basic, checkbox and radio type behavior.

#### **APP.VUE**

```

<template>
  <div id='app'>
    <h5>Normal behavior</h5>
    <div id='basic'>
      <button></button>
      <button></button>
      <button></button>
    </div>
    <h5>Checkbox type behavior</h5>
    <div id='checkbox'>
      <input type="checkbox" id="checkbold" name="font" value='bold' />
      <input type="checkbox" id="checkitalic" name="font" value='italic' />
      <input type="checkbox" id="checkunderline" name="font" value='underline' />
    </div>
    <h5>Radiobutton type behavior</h5>
    <div id='radio'>
      <input type="radio" id="radioleft" name="align" value='left' />
      <input type="radio" id="radiomiddle" name="align" value='middle' />
      <input type="radio" id="radiatoright" name="align" value='right' />
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
import { createButtonGroup } from '@syncfusion/ej2-splitbuttons';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
Vue.use(ButtonPlugin);
export default {
  name: 'app',
  mounted() {
    createButtonGroup('#basic', {
      buttons: [
        { content: 'HTML' },
        { content: 'CSS' },
        { content: 'Javascript' }
      ]
    });
    createButtonGroup('#checkbox', {
      buttons: [
        { content: 'Bold' },
        { content: 'Italic' },
        { content: 'Undeline' }
      ]
    });
    createButtonGroup('#radio', {
      buttons: [
        { content: 'Left' },
        { content: 'Center' },
        { content: 'Right' }
      ]
    });
  }
}
</script>
<style>

```

```
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-vue-buttons/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
@import '../node_modules/@syncfusion/ej2-popups/styles/material.css';
@import '../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css';
.e-btn-group {
  margin: 0 5px 5px 5px;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/button-group/getting-started-cs10" %}

Show buttongroup selected state on initial render in Vue Button group component

To show selected state on initial render, `checked` property should be added to the corresponding input element.

The following example illustrates how to show selected state on initial render.

#### APP.VUE

```
<template>
  <div id='app'>
    <div class='e-btn-group'>
      <input type="checkbox" id="checkbold" name="font" value="bold" checked/>
      <label class="e-btn" for="checkbold">Bold</label>
      <input type="checkbox" id="checkitalic" name="font" value="italic" />
      <label class="e-btn" for="checkitalic">Italic</label>
      <input type="checkbox" id="checkline" name="font" value="underline" />
      <label class="e-btn" for="checkline">Underline</label>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
export default {
  name: 'app'
}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
@import '../node_modules/@syncfusion/ej2-popups/styles/material.css';
@import '../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css';
#app {
  margin: 20px;
}
.e-btn-group {
  margin: 25px 5px 20px 20px;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/button-group/getting-started-cs11" %}

## Button

### Getting Started with the Vue Button Component in Vue 2

This article provides a step-by-step guide for setting up a Vue 2 project using [Vue-CLI](#) and integrating the Syncfusion Vue Button component using the [Composition API](#) / [Options API](#).

#### Prerequisites

##### [System requirements for Syncfusion Vue UI components](#)

#### Dependencies

The list of dependencies required to use the Button component in your application is given below :

```
`js
|-- @syncfusion/ej2-vue-buttons
|-- @syncfusion/ej2-base
|-- @syncfusion/ej2-buttons
|-- @syncfusion/ej2-vue-base
`,`
```

#### Setting up the Vue 2 project

To generate a Vue 2 project using Vue-CLI, use the [vue create](#) command. Follow these steps to install Vue CLI and create a new project:

```
`bash
npm install -g @vue/cli
vue create quickstart
cd quickstart
npm run serve
`,`
```

or

```
`bash
yarn global add @vue/cli
vue create quickstart
cd quickstart
yarn run serve
`,`
```

When creating a new project, choose the option **Default ([Vue 2] babel, eslint)** from the menu.

```
E:\samples>vue create quickstart

Vue CLI v5.0.8
? Please pick a preset:
  Default ([Vue 3] babel, eslint)
> Default ([Vue 2] babel, eslint)
  Manually select features
```

Once the `quickstart` project is set up with default settings, proceed to add Syncfusion components to the project.

### Add Syncfusion Vue packages

Install Syncfusion `Button` packages using below command.

Syncfusion packages are available at [npmjs.com](https://www.npmjs.com). To use Vue components, install the required npm package.

This article uses the [Vue Button component](#) as an example. Install the `@syncfusion/ej2-vue-buttons` package by running the following command:

```
`bash
```

```
npm install @syncfusion/ej2-vue-buttons --save
```

```
,
```

or

```
`bash
```

```
yarn add @syncfusion/ej2-vue-buttons
```

```
,
```

### Import Syncfusion CSS styles

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, [CRG](#) and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to themes in a Vue project.

In this article, the `Material` theme is applied using CSS styles, which are available in installed packages. The necessary `Material` CSS styles for the `Button` component and its dependents were imported into the `<style>` section of `src/App.vue` file.

### ~SRC/APP.VUE

```
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
</style>
```

### Add Syncfusion Vue component

Follow the below steps to add the Vue Button component using `Composition API` or `Options API`:

1\ First, import and register the Button component in the `script` section of the `src/App.vue` file. If you are using the `Composition API`, you should add the `setup` attribute to the `script` tag to indicate that Vue will be using the `Composition API`.

#### **COMPOSITION API (~SRC/APP.VUE)**

```
<script setup>
import { ButtonComponent as EjsButton } from '@syncfusion/ej2-vue-buttons';
</script>
```

#### **OPTIONS API (~SRC/APP.VUE)**

```
<script>
import { ButtonComponent } from '@syncfusion/ej2-vue-buttons';
export default {
  components: {
    'ejs-button': ButtonComponent
  }
}
</script>
```

2\ In the `template` section, define the Button component.

#### **~/SRC/APP.VUE**

```
<template>
<ejs-button>Button</ejs-button>
</template>
```

Here is the summarized code for the above steps in the `src/App.vue` file:

#### **COMPOSITION API (~SRC/APP.VUE)**

```
<template>
<ejs-button>Button</ejs-button>
</template>
<script setup>
import { ButtonComponent as EjsButton } from '@syncfusion/ej2-vue-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
button {
  margin: 25px 5px 20px 20px;
}
</style>
```

#### **OPTIONS API (~SRC/APP.VUE)**

```
<template>
<ejs-button>Button</ejs-button>
</template>
<script>
```

```
import { ButtonComponent } from '@syncfusion/ej2-vue-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
export default {
  components: {
    'ejs-button': ButtonComponent
  }
}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
button {
  margin: 25px 5px 20px 20px;
}
</style>
```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run serve
```

```
,
```

or

```
`bash
```

```
yarn run serve
```

```
,
```

```
{% previewsample "page.domainurl/code-snippet/button/default-cs1" %}
```

### Change Button type

To change the default Button to flat Button, set the [cssClass](#) property to `e-flat` and text content of the Button is set using [content](#) property.

### COMPOSITION API (~SRC/APP.VUE)

```
<template>
<ejs-button cssClass='e-flat'>Button</ejs-button>
</template>
<script setup>
import { ButtonComponent as EjsButton } from '@syncfusion/ej2-vue-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
button {
  margin: 25px 5px 20px 20px;
}
</style>
```

**OPTIONS API (~SRC/APP.VUE)**

```
<template>
<ejs-button cssClass='e-flat'>Button</ejs-button>
</template>
<script>
import { ButtonComponent } from '@syncfusion/ej2-vue-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
export default {
  components: {
    'ejs-button': ButtonComponent
  }
}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
button {
  margin: 25px 5px 20px 20px;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/button/default-cs2" %}

## Getting Started with the Vue Button Component in Vue 3

This article provides a step-by-step guide for setting up a [Vite](#) project with a JavaScript environment and integrating the Syncfusion Vue Button component using the [Composition API](#) / [Options API](#).

The **Composition API** is a new feature introduced in Vue.js 3 that provides an alternative way to organize and reuse component logic. It allows developers to write components as functions that use smaller, reusable functions called composition functions to manage their properties and behavior.

The **Options API** is the traditional way of writing Vue.js components, where the component logic is organized into a series of options that define the component's properties and behavior. These options include data, methods, computed properties, watchers, lifecycle hooks, and more.

### Prerequisites

#### [System requirements for Syncfusion Vue UI components](#)

#### Set up the Vite project

A recommended approach for beginning with Vue is to scaffold a project using [Vite](#). To create a new Vite project, use one of the commands that are specific to either NPM or Yarn.

```
`bash
```

```
npm create vite@latest
```

```
`
```

or

```
`bash
yarn create vite
`
```

Using one of the above commands will lead you to set up additional configurations for the project as below:

1. Define the project name: We can specify the name of the project directly. Let's specify the name of the project as `my-project` for this article.

```
`bash
? Project name: » my-project
`
```

2. Select `Vue` as the framework. It will create a Vue 3 project.

```
`bash
? Select a framework: » - Use arrow-keys. Return to submit.
Vanilla
Vue
React
Preact
Lit
Svelte
Others
`
```

3. Choose `JavaScript` as the framework variant to build this Vite project using JavaScript and Vue.

```
`bash
? Select a variant: » - Use arrow-keys. Return to submit.
JavaScript
TypeScript
Customize with create-vue ↗
Nuxt ↗
`
```

4. Upon completing the aforementioned steps to create the `my-project`, run the following command to install its dependencies:

```
`bash
cd my-project
npm install
```

```
`  
or  
`bash  
cd my-project  
yarn install  
`
```

Now that `my-project` is ready to run with default settings, let's add Syncfusion components to the project.

#### Add Syncfusion Vue packages

Syncfusion Vue component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion Vue components in the project, install the corresponding npm package.

This article uses the [Vue Button component](#) as an example. To use the Vue Button component in the project, the `@syncfusion/ej2-vue-buttons` package needs to be installed using the following command:

```
`bash  
npm install @syncfusion/ej2-vue-buttons --save  
`  
or  
`bash  
yarn add @syncfusion/ej2-vue-buttons  
`
```

#### Import Syncfusion CSS styles

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, [CRG](#) and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to themes in a Vue project.

In this article, `Material` theme is applied using CSS styles, which are available in installed packages. The necessary `Material` CSS styles for the Button component and its dependents were imported into the `<style>` section of `src/App.vue` file.

#### ~/SRC/APP.VUE

```
<style>  
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";  
@import "../node_modules/@syncfusion/ej2-vue-buttons/styles/material.css";  
</style>
```

The order of importing CSS styles should be in line with its dependency graph.

#### Add Syncfusion Vue component

Follow the below steps to add the Vue Button component using `Composition API` or `Options API`:

1.First, import and register the Button component and its child directives in the `script` section of the `src/App.vue` file. If you are using the `Composition API`, you should add the `setup` attribute to the `script` tag to indicate that Vue will be using the `Composition API`.

#### **COMPOSITION API (~/SRC/APP.VUE)**

```
<script setup>
import { ButtonComponent as EjsButton } from "@syncfusion/ej2-vue-buttons";
</script>
```

#### **OPTIONS API (~/SRC/APP.VUE)**

```
<script>
import { ButtonComponent } from "@syncfusion/ej2-vue-buttons";
//Component registration
export default {
  name: "App",
  components: {
    "ejs-button": ButtonComponent
  }
}
</script>
```

2.In the `template` section, define the Button component with the `content` property.

#### **~/SRC/APP.VUE**

```
<template>
<ejs-button :content="content"></ejs-button>
</template>
```

3.Declare the value for the content property in the script section.

#### **COMPOSITION API (~/SRC/APP.VUE)**

```
<template>
<ejs-button :content="content"></ejs-button>
</template>
<script setup>
import { ButtonComponent as EjsButton } from "@syncfusion/ej2-vue-buttons";
const content = "Button";
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-buttons/styles/material.css";
</style>
```

#### **OPTIONS API (~/SRC/APP.VUE)**

```
<template>
<ejs-button :content="content"></ejs-button>
</template>
<script>
import { ButtonComponent } from '@syncfusion/ej2-vue-buttons';
//Component registration
```

```
export default {
  name: "App",
  components: {
    "ejs-button": ButtonComponent
  },
  data() {
    return {
      content: "Button"
    };
  }
}
```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run dev
```

```
,
```

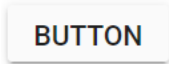

or

```
`bash
```

```
yarn run dev
```

```
,
```

The output will appear as follows:

**Sample:** [vue-3-button-getting-started](#).

For migrating from Vue 2 to Vue 3, refer to the [migration](#) documentation.

### Types and styles in Vue Button component

This section explains the different styles and types of Buttons.

#### Button styles

The Essential JS 2 Button has the following predefined styles that can be defined using the [cssClass](#) property.

Class	Description
-------	-------------

-----	-----
-------	-------

e-primary	Used to represent a primary action.
-----------	-------------------------------------

- | e-success | Used to represent a positive action. |
- | e-info | Used to represent an informative action. |
- | e-warning | Used to represent an action with caution. |
- | e-danger | Used to represent a negative action. |
- | e-link | Changes the appearance of the Button like a hyperlink. |

**APP.VUE**

```

<template>
<div>
  <ejs-button cssClass='e-primary'>Primary</ejs-button>
  <ejs-button cssClass='e-success'>Success</ejs-button>
  <ejs-button cssClass='e-info'>Info</ejs-button>
  <ejs-button cssClass='e-warning'>Warning</ejs-button>
  <ejs-button cssClass='e-danger'>Danger</ejs-button>
  <ejs-button cssClass='e-link'>Link</ejs-button>
</div>
</template>
<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
Vue.use(ButtonPlugin);
export default {}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
button {
  margin: 25px 5px 20px 20px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/button/default-cs12" %}

Predefined Button styles provide only the visual indication. So, Button content should define the Button style for the users of assistive technologies such as screen readers.

Primary action button can also be achieved by setting [isPrimary](#) property as `true`.

**Button types**

The types of Essential JS 2 Button are as follows:

- Basic types
- Flat Button
- Outline Button
- Round Button
- Toggle Button

*Basic types*

The basic Button types are explained below.

Type	Description
Button	Defines a click Button.
Submit	This Button submits the form data to the server.
Reset	This Button resets all the controls in the form elements to their initial values.

**APP.VUE**

```

<template>
  <form>
    <ejs-button type='submit'>Submit</ejs-button>
    <ejs-button type='reset'>Reset</ejs-button>
  </form>
</template>
<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
Vue.use(ButtonPlugin);
export default {}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
button {
  margin: 25px 5px 20px 20px;
}
</style>

```

```
{% previewsample "page.domainurl/code-snippet/button/default-cs13" %}
```

*Flat Button*

The Flat Button is styled with no background color. To create a flat Button, set the [cssClass](#) property to **e-flat**.

*Outline Button*

An outline Button has a border with transparent background. To create an outline Button, set the [cssClass](#) property to **e-outline**.

*Round Button*

A round Button is shaped like a circle. Usually, it contains an icon representing its action. To create a round Button, set the [cssClass](#) property to **e-round**.

**APP.VUE**

```

<template>
  <div>
    <ejs-button cssClass='e-flat'>Flat</ejs-button>
    <ejs-button cssClass='e-outline'>Outline</ejs-button>
    <ejs-button cssClass='e-round' iconCss='e-icons e-plus-icon'
isPrimary=true></ejs-button>
  </div>
</template>

```

```

<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
Vue.use(ButtonPlugin);
export default {}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
button {
    margin: 25px 5px 20px 20px;
}
.e-plus-icon::before {
    content: '\e823';
}
</style>

```

{% previewsample "page.domainurl/code-snippet/button/default-cs14" %}

### Toggle Button

A toggle Button allows you to change between the two states. The Button is active in toggled state and can be

recognized through the `e-active` class. The functionality of the toggle Button is handled by click event. To create a toggle Button, set the `isToggle` property to `true`. In the following code snippet, the toggle Button text changes to play/pause based on the state of the Button with the use of click event.

### APP.VUE

```

<template>
    <ejs-button ref="toggleBtn" cssClass='e-flat' iconCss='e-btn-sb-icon e-play-icon' isToggle=true v-on:click.native='btnClick'>Play</ejs-button>
</template>
<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
Vue.use(ButtonPlugin);
export default {
    methods : {
        btnClick: function(event) {
            if (this.$refs.toggleBtn.$el.classList.contains('e-active')) {
                this.$refs.toggleBtn.content = 'Play';
                this.$refs.toggleBtn.iconCss = 'e-btn-sb-icon e-play-icon';
            } else {
                this.$refs.toggleBtn.content = 'Pause';
                this.$refs.toggleBtn.iconCss = 'e-btn-sb-icon e-pause-icon';
            }
        }
    }
}
</script>
<style>

```

```

@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
button {
    margin: 25px 5px 20px 20px;
}

## Icons

### Button with font icons

The Button can have an icon to provide the visual representation of the action. To place the icon on a Button,

set the [iconCss](#) property to `e-icons` with the required icon CSS. By default, the icon is positioned to the left side of the Button. You can customize the icon's position by using the [iconPosition](#) property.

## APP.VUE

```

<template>
  <div>
    <ejs-button iconCss='e-btn-sb-icon e-prev-icon'>Previous</ejs-
button>
    <ejs-button iconCss='e-btn-sb-icon e-stop-icon'
iconPosition='Right'>Stop</ejs-button>
  </div>
</template>
<script>

{% previewsample "page.domainurl/code-snippet/button/default-cs16" %}

#### Button with SVG image

SVG image can be added to the Button using [iconCss](#) property.

In the following example, SVG image is added using the iconCss class `e-search-icon` by setting `height` and `width`.

#### APP.VUE

```

<template>
  <div>
    <ejs-button iconCss='e-search-icon'></ejs-button>
  </div>
</template>
<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
Vue.use(ButtonPlugin);
export default {}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
button {
  margin: 25px 5px 20px 20px;
}
.e-btn-icon.e-search-icon {
  background: url('../.../button/images/search_icon.svg');
  height: 25px;
  width: 25px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/button/default-cs17" %}

The Essential JS 2 provides a set of icons that can be loaded by applying `e-icons` class name to the element. You can also use third party icons on the Button using the [iconCss](#) property.

#### Button size

The two types of Button sizes are default and small. To change the size of the default Button to small Button,

set the [cssClass](#) property to `e-small`.

#### APP.VUE

```

<template>
  <div>
    <ejs-button cssClass='e-small'>Small</ejs-button>
    <ejs-button >Normal</ejs-button>
  </div>
</template>
<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
Vue.use(ButtonPlugin);
export default {}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
button {
  margin: 25px 5px 20px 20px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/button/default-cs18" %}

### Style and appearance in Vue Button component

To modify the Button appearance, you need to override the default CSS of Button component. Please find the list of CSS classes and its corresponding section in Button component. Also, you have an option to create your own custom theme for the controls using our [Theme Studio](#).

CSS Class | Purpose of Class

- |.e-btn|To customize the button.
- |.e-btn: hover|To customize the button on hover.
- |.e-btn: focus|To customize the button on focus.
- |.e-btn: active|To customize the button on active.

### Accessibility in Vue Button component

The Button component followed the accessibility guidelines and standards, including [ADA, Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the Button component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2](#) Support | `` |

| [Section 508](#) Support | `` |

| Screen Reader Support | `` |

| Right-To-Left Support | `` |

| Color Contrast | `` |

| Mobile Device Support | `` |

| Keyboard Navigation Support | `` |

| [Accessibility Checker](#) Validation | `` |

| [Axe-core](#) Accessibility Validation | `` |

`<style>`

`.post .post-content img {`

`display: inline-block;`

`margin: 0.5em 0;`

`}`

`</style>`

`<div>` - All features of the component meet the requirement.`</div>`

`<div>` - Some features of the component do not meet the requirement.`</div>`

`<div>` - The component does not meet the requirement.`</div>`

### WAI-ARIA attributes

The Button component followed the [WAI-ARIA](#) patterns to meet the accessibility. The following ARIA attributes are used in the Button component:

| Attributes | Purpose |

| --- | --- |

| `aria-label` | Provides an accessible name for the icon only button. |

### Keyboard interaction

The Button component followed the [keyboard interaction](#) guideline, making it easy for people who use assistive technologies (AT) and those who completely rely on keyboard navigation. The following keyboard shortcuts are supported by the Button component.

| **Press** | **To do this** |

| --- | --- |

| **Space** | When the button has focus, pressing the space key changes the state of the button. |

### Ensuring accessibility

The Button component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Button component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Button component with accessibility tools.

```
{% previewsample "page.domainurl/code-snippet/button/default-cs1" %}
```

See also

- [Accessibility in Syncfusion Vue components](#)

### How To

#### Add link to a button in Vue Button component

The appearance of the Button can be changed like a link by `e-link` class using [cssClass](#) property and link navigation can be handled in Button click.

In the following example, link is added in Button click by using `window.open()` method.

#### APP.VUE

```
<template>
<ejs-button cssClass='e-link' v-on:click.native='btnClick'>Button</ejs-
button>
</template>
<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
Vue.use(ButtonPlugin);
export default {
  methods : {
    btnClick: function(event) {
      window.open("https://www.google.com");
    }
  }
}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
button {
  margin: 25px 5px 20px 20px;
```

```
}
</style>
```

```
{% previewsample "page.domainurl/code-snippet/button/default-cs3" %}
```

### Create a block button in Vue Button component

You can customize a Button into a Block Button that will span the entire width of its parent element. To create a Block Button, set the [cssClass](#) property to `e-block`.

#### APP.VUE

```
<template>
<div>
  <ejs-button cssClass='e-block'>Block Button</ejs-button>
  <ejs-button cssClass='e-block' isPrimary=true>Block Button</ejs-button>
  <ejs-button cssClass='e-block e-success'>Block Button</ejs-button>
</div>
</template>
<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
Vue.use(ButtonPlugin);
export default {}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
button {
  margin: 25px 0;
}
</style>
```

```
{% previewsample "page.domainurl/code-snippet/button/default-cs4" %}
```

### Customize button appearance in Vue Button component

You can customize the appearance of the Button by using the Cascading Style Sheets (CSS). Define the CSS according to your requirement, and assign the class name to the [cssClass](#) property. In the following code snippet the background color, text color, height, width, and sharp corner of the Button can be customized through the `e-custom` class for all states (hover, focus, and active).

#### APP.VUE

```
<template>
  <ejs-button cssClass='e-custom'>Custom</ejs-button>
</template>
<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
Vue.use(ButtonPlugin);
export default {}
</script>
```

```

<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
.e-custom {
  border-radius: 0;
  height: 30px;
  width: 80px;
}
.e-custom, .e-custom:hover, .e-custom:focus, .e-custom:active {
  background-color: #ff6e40;
  color: #fff;
}
button {
  margin: 25px 5px 20px 20px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/button/default-cs6" %}

### Customize input and anchor elements in Vue Button component

You can customize the appearance of the input and anchor elements using predefined styles through the class property. In the following code snippet, the input element is customized as a link Button by setting the `e-btn e-link` class, and the anchor element is customized as a primary Button by setting the `e-btn e-primary` class.

#### APP.VUE

```

<template>
<div>
  <div>
    <input type='button' value='Input Button' class='e-btn e-link' />
  </div>
  <br>
  <div>
    <a id='anchorbtn' class='e-btn e-primary' href='#'>Google</a>
  </div>
</div>
</template>
<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
Vue.use(ButtonPlugin);
export default {}
</script>
<style>
  @import '../node_modules/@syncfusion/ej2-base/styles/material.css';
  @import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
</style>

```

{% previewsample "page.domainurl/code-snippet/button/default-cs7" %}

### Repeat button in Vue Button component

The Repeat button is a type of Button in that the click event is triggered at regular time interval from the pressed state till the released state.

The following example explains about how to achieve Repeat Button in mouse and touch events.

#### APP.VUE

```
<template>
  <div id='container'>
    <div class='btncontainer'>
      <ejs-button id='button' cssClass='e-small'>Button</ejs-button>
    </div>
    <div class='event' style='height:auto;'>
      <table title='Event Trace' style='width:100%'>
        <tbody>
          <tr>
            <th>Event Trace</th>
          </tr>
          <tr>
            <td>
              <div class='eventarea' style='height: 250px;overflow:
auto'>
                <span id='eventlog' style='word-break:
normal;'></span>
              </div>
            </td>
            <td>
              <div class='evtbtn' style='padding:20px 0 0 20px'>
                <ejs-button id='clear' cssClass='e-
small'>Clear</ejs-button>
              </div>
            </td>
          </tr>
        </tbody>
      </table>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
import { enableRipple, EventHandler } from '@syncfusion/ej2-base';
enableRipple(true);
Vue.use(ButtonPlugin);
export default {
  mounted () {
    var timeout;
    document.getElementById('clear').onclick = function () {
      document.getElementById('eventlog').innerHTML = '';
    }
    var button = document.getElementById('button');
    button.addEventListener('mousedown', mouseDownHandler);
    button.addEventListener('touchstart', mouseDownHandler);
    button.addEventListener('mouseup', mouseUpHandler);
```

```

button.addEventListener('touchend', mouseUpHandler);
button.addEventListener('click', clickEventHandler);
function mouseUpHandler() {
    clearInterval(timeout);
}
function mouseDownHandler(event) {
    event.preventDefault();
    timeout = setInterval(clickEventHandler, 200);
}
function clickEventHandler() {
    EventHandler.trigger(button, 'click');
    appendSpanElement('Button click event triggered.<hr>');
}
function appendSpanElement(text) {
    var span = document.createElement('span');
    span.innerHTML = text;
    var log = document.getElementById('eventlog');
    log.insertBefore(span, log.firstChild);
}
}
}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
.btncontainer {
    float: left;
    width: 40%;
}
.event {
    float: right;
    width: 60%;
    border-left: 1px solid #D7D7D7;
}
#eventlog b {
    color: #388e3c;
}
hr {
    margin: 1px 10px 1px 0px;
    border-top: 1px solid #eee;
}
</style>

```

```
{% previewsample "page.domainurl/code-snippet/button/default-cs8" %}
```

Right to left in Vue Button component

Button component has RTL support. This can be achieved by setting [enableRtl](#) as

**true**.

The following example illustrates how to enable right-to-left support in Button component.

#### APP.VUE

```

<template>
    <ejs-button iconCss='e-icons e-setting-icon'
    enableRtl=true>Settings</ejs-button>

```

```

</template>
<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
Vue.use(ButtonPlugin);
export default {}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
.e-setting-icon::before {
  content: '\e434';
}
button {
  margin: 25px 5px 20px 20px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/button/default-cs9" %}

#### Set the disabled state in Vue Button component

Vue Button component can be enabled/disabled by giving [disabled](#) property. To disable Vue Button component, the `disabled` property can be set as `true`.

The following example demonstrates Button in `disabled` state.

#### APP.VUE

```

<template>
  <ejs-button disabled=true>Disabled</ejs-button>
</template>
<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
Vue.use(ButtonPlugin);
export default {}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
button {
  margin: 25px 5px 20px 20px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/button/default-cs10" %}

#### Tooltip for button in Vue Button component

Tooltip can be shown on Button hover and it can be achieved by setting `title` attribute.

The following snippets illustrates how to show tooltip on Button hover.

**APP.VUE**

```

<template>
  <ejs-button id='button' isPrimary=true>Button</ejs-button>
</template>
<script>
import Vue from 'vue';
import { ButtonPlugin } from '@syncfusion/ej2-vue-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
Vue.use(ButtonPlugin);
export default {
  mounted () {
    document.getElementById('button').setAttribute('title', 'Primary
Button');
  }
}
</script>
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
button {
  margin: 25px 5px 20px 20px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/button/default-cs11" %}

## Calendar

### Getting Started with the Vue Calendar Component in Vue 2

This article provides a step-by-step guide for setting up a Vue 2 project using [Vue-CLI](#) and integrating the Syncfusion Vue Calendar component using the [Composition API](#) / [Options API](#)

#### Prerequisites

[System requirements for Syncfusion Vue UI components](#)

#### Dependencies

The list of dependencies required to use the Calendar component in your application is given below:

```

`javascript
|-- @syncfusion/ej2-vue-calendars
|-- @syncfusion/ej2-base
|-- @syncfusion/ej2-data
|-- @syncfusion/ej2-vue-base
|-- @syncfusion/ej2-calendars
|-- @syncfusion/ej2-inputs
|-- @syncfusion/ej2-splitbuttons
|-- @syncfusion/ej2-lists

```

```
|-- @syncfusion/ej2-popups  
|-- @syncfusion/ej2-buttons  
,
```

### Setting up the Vue 2 project

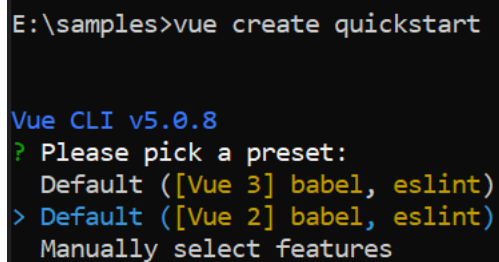

To generate a Vue 2 project using Vue-CLI, use the [vue create](#) command. Follow these steps to install Vue CLI and create a new project:

```
`bash  
npm install -g @vue/cli  
vue create quickstart  
cd quickstart  
npm run serve  
,
```

or

```
`bash  
yarn global add @vue/cli  
vue create quickstart  
cd quickstart  
yarn run serve  
,
```

When creating a new project, choose the option **Default ([Vue 2] babel, eslint)** from the menu.

```
E:\samples>vue create quickstart  
  
Vue CLI v5.0.8  
? Please pick a preset:  
  Default ([Vue 3] babel, eslint)  
> Default ([Vue 2] babel, eslint)  
  Manually select features
```

Once the **quickstart** project is set up with default settings, proceed to add Syncfusion components to the project.

### Adding Syncfusion packages

Syncfusion packages are available at [npmjs.com](https://www.syncfusion.com). To use Vue components, install the required npm package.

This article uses the [Vue Calendar component](#) as an example. Install the **@syncfusion/ej2-vue-calendars** package by running the following command:

```
`bash
```

```
npm install @syncfusion/ej2-vue-calendars --save
```

```
,
```

```
or
```

```
`bash
```

```
yarn add @syncfusion/ej2-vue-calendars
```

```
,
```

### Import Syncfusion CSS styles

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, [CRG](#) and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to themes in a Vue project.

In this article, the **Material** theme is applied using CSS styles, which are available in installed packages. The necessary **Material** CSS styles for the Calendar component and its dependents were imported into the `<style>` section of **src/App.vue** file.

#### ~/SRC/APP.VUE

```
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-calendars/styles/material.css";
</style>
```

### Add Syncfusion Vue component

Follow the below steps to add the Vue Calendar component using **Composition API** or **Options API**:

1\ First, import and register the Calendar component in the **script** section of the **src/App.vue** file. If you are using the **Composition API**, you should add the **setup** attribute to the **script** tag to indicate that Vue will be using the **Composition API**.

#### COMPOSITION API (~/SRC/APP.VUE)

```
<script setup>
import { CalendarComponent as EjsCalendar } from '@syncfusion/ej2-vue-
calendars';
</script>
```

#### OPTIONS API (~/SRC/APP.VUE)

```
<script>
import { CalendarComponent } from '@syncfusion/ej2-vue-calendars';
export default {
  components: {
    'ejs-calendar': CalendarComponent
  }
}
</script>
```

2\ In the **template** section, define the Calendar component.

**(~/SRC/APP.VUE)**

```
<template>
<div id="app">
<ejs-calendar ></ejs-calendar>
</div>
</template>
```

Here is the summarized code for the above steps in the **src/App.vue** file:

**COMPOSITION API (~/SRC/APP.VUE)**

```
<template>
  <div id="app">
    <div class='wrapper'>
      <ejs-calendar ></ejs-calendar>
    </div>
  </div>
</template>
<script setup>
import { CalendarComponent as EjsCalendar } from '@syncfusion/ej2-vue-
calendars';
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-calendars/styles/material.css";
.wrapper {
  max-width: 250px;
  margin: 0 auto;
}
</style>
```

**OPTIONS API (~/SRC/APP.VUE)**

```
<template>
  <div id="app">
    <div class='wrapper'>
      <ejs-calendar ></ejs-calendar>
    </div>
  </div>
</template>
<script>
import { CalendarComponent } from '@syncfusion/ej2-vue-calendars';
export default {
  components: {
    'ejs-calendar': CalendarComponent
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-calendars/styles/material.css";
.wrapper {
  max-width: 250px;
}
```

```
margin: 0 auto;
}
</style>
```

### Running the Project

To run the project, use the following command:

```
`bash
```

```
npm run serve
```

```
,
```

```
or
```

```
`bash
```

```
yarn run serve
```

```
,
```

```
{% previewsample "page.domainurl/code-snippet/calendar/getting-started-cs1" %}
```

Setting the value, min and max dates

The following example demonstrates how to set the value, min and max dates on initializing the Calendar. Here the Calendar allows you to select a date within the range from 9th to 15th in the month of May 2017. To know more about range restriction in Calendar, please refer this [page](#).

### COMPOSITION API (~SRC/APP.VUE)

```
<template>
  <div id="app">
    <div class='wrapper'>
      <ejs-calendar :min="minDate" :max="maxDate" :value="dateVal" ></ejs-
calendar>
    </div>
  </div>
</template>
<script setup>
import { CalendarComponent as EjsCalendar } from '@syncfusion/ej2-vue-
calendars';
const minDate = new Date("05/09/2017");
const maxDate = new Date("05/15/2017");
const dateVal = new Date("05/11/2017");

</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-vue-
calendars/styles/material.css";
  .wrapper {
    max-width: 250px;
    margin: 0 auto;
  }
</style>
```

**OPTIONS API (~SRC/APP.VUE)**

```

<template>
  <div id="app">
    <div class='wrapper'>
      <ejs-calendar :min="minDate" :max="maxDate" :value="dateVal" ></ejs-
calendar>
    </div>
  </div>
</template>
<script>
import { CalendarComponent } from '@syncfusion/ej2-vue-calendars';
export default {
  components: {
    'ejs-calendar': CalendarComponent
  },
  data () {
    return {
      minDate : new Date("05/09/2017"),
      maxDate : new Date("05/15/2017"),
      dateVal : new Date("05/11/2017")
    }
  }
}
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-vue-
calendars/styles/material.css";
  .wrapper {
    max-width: 250px;
    margin: 0 auto;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/calendar/min-max-cs7" %}

### Getting Started with the Vue Calendar Component in Vue 3

This article provides a step-by-step guide for setting up a [Vite](#) project with a JavaScript environment and integrating the Syncfusion Vue Calendar component using the [Composition API](#) / [Options API](#).

The **Composition API** is a new feature introduced in Vue.js 3 that provides an alternative way to organize and reuse component logic. It allows developers to write components as functions that use smaller, reusable functions called composition functions to manage their properties and behavior.

The **Options API** is the traditional way of writing Vue.js components, where the component logic is organized into a series of options that define the component's properties and behavior. These options include data, methods, computed properties, watchers, lifecycle hooks, and more.

#### Prerequisites

##### [System requirements for Syncfusion Vue UI components](#)

#### Set up the Vite project

A recommended approach for beginning with Vue is to scaffold a project using [Vite](#). To create a new Vite project, use one of the commands that are specific to either NPM or Yarn.

```
`bash
```

```
npm create vite@latest
```

```
`
```

or

```
`bash
```

```
yarn create vite
```

```
`
```

Using one of the above commands will lead you to set up additional configurations for the project as below:

1. Define the project name: We can specify the name of the project directly. Let's specify the name of the project as **my-project** for this article.

```
`bash
```

```
? Project name: » my-project
```

```
`
```

2. Select **Vue** as the framework. It will create a Vue 3 project.

```
`bash
```

```
? Select a framework: » - Use arrow-keys. Return to submit.
```

```
Vanilla
```

```
Vue
```

```
React
```

```
Preact
```

```
Lit
```

```
Svelte
```

```
Others
```

```
`
```

3. Choose **JavaScript** as the framework variant to build this Vite project using JavaScript and Vue.

```
`bash
```

? Select a variant: » - Use arrow-keys. Return to submit.

JavaScript

TypeScript

Customize with create-vue ↗

Nuxt ↗

,

4. Upon completing the aforementioned steps to create the `my-project`, run the following command to install its dependencies:

```
`bash
```

```
cd my-project
```

```
npm install
```

,

or

```
`bash
```

```
cd my-project
```

```
yarn install
```

,

Now that `my-project` is ready to run with default settings, let's add Syncfusion components to the project.

#### Add Syncfusion Vue packages

Syncfusion Vue component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion Vue components in the project, install the corresponding npm package.

This article uses the [Vue Calendar component](#) as an example. To use the Vue Calendar component in the project, the `@syncfusion/ej2-vue-calendars` package needs to be installed using the following command:

```
`bash
```

```
npm install @syncfusion/ej2-vue-calendars --save
```

,

or

```
`bash
```

```
yarn add @syncfusion/ej2-vue-calendars
```

,

#### Import Syncfusion CSS styles

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, [CRG](#) and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to themes in a Vue project.

In this article, **Material** theme is applied using CSS styles, which are available in installed packages. The necessary **Material** CSS styles for the Calendar component and its dependents were imported into the `<style>` section of **src/App.vue** file.

#### ~/SRC/APP.VUE

```
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-calendars/styles/material.css";
</style>
```

The order of importing CSS styles should be in line with its dependency graph.

#### Add Syncfusion Vue component

Follow the below steps to add the Vue Calendar component using **Composition API** or **Options API**:

1.First, import and register the Calendar component in the **script** section of the **src/App.vue** file. If you are using the **Composition API**, you should add the **setup** attribute to the **script** tag to indicate that Vue will be using the **Composition API**.

#### COMPOSITION API (~/SRC/APP.VUE)

```
<script setup>
import { CalendarComponent as EjsCalendar } from '@syncfusion/ej2-vue-
calendars';
</script>
```

#### OPTIONS API (~/SRC/APP.VUE)

```
<script>
import { CalendarComponent } from "@syncfusion/ej2-vue-calendars";
//Component registration
export default {
  name: "App",
  components: {
    'ejs-calendar' : CalendarComponent,
  }
}
</script>
```

2.In the **template** section, define the Calendar component with the [dataSource](#) property and column definitions.

#### ~/SRC/APP.VUE

```
<template>
<div class="control_wrapper">
<ejs-calendar></ejs-calendar>
</div>
</template>
```

Here is the summarized code for the above steps in the **src/App.vue** file:

#### COMPOSITION API (~/SRC/APP.VUE)

```
<template>
<div class="control_wrapper">
<ejs-calendar></ejs-calendar>
</div>
</template>
<script setup>
import { CalendarComponent as EjsCalendar } from '@syncfusion/ej2-vue-
calendars';
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-calendars/styles/material.css";
.control_wrapper {
max-width: 250px;
margin: 0 auto;
}
</style>
```

### OPTIONS API (~SRC/APP.VUE)

```
<template>
<div class="control_wrapper">
<ejs-calendar></ejs-calendar>
</div>
</template>
<script>
import { CalendarComponent } from "@syncfusion/ej2-vue-calendars";
//Component registration
export default {
name: 'App',
components: {
"ejs-calendar": CalendarComponent
},
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-calendars/styles/material.css";
.control_wrapper {
max-width: 250px;
margin: 0 auto;
}
</style>
```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run dev
```

```
,
```

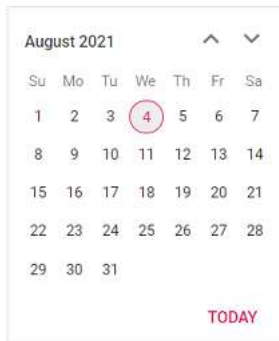

or

```
`bash
```

```
yarn run dev
```

```
,
```

The output will appear as follows:

### Setting the value, min and max dates

The following example demonstrates how to set the value, min and max dates on initializing the Calendar. Here the Calendar allows you to select a date within the range from 9th to 15th in the month of May 2017. To know more about range restriction in Calendar, please refer this [page](#).

#### **COMPOSITION API (~SRC/APP.VUE)**

```
<template>
<div id="app">
  <div class='wrapper'>
    <ejs-calendar :min="data[0].minDate" :max="data[0].maxDate"
      :value="data[0].dateVal" ></ejs-calendar>
  </div>
</div>
</template>
<script setup>
import { CalendarComponent as EjsCalendar } from "@syncfusion/ej2-vue-
calendars";
const data = [{minDate: new Date("05/04/2017"),
maxDate: new Date("05/16/2017"),
dateVal: new Date("05/10/2017")}];
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-calendars/styles/material.css";
.wrapper {
max-width: 250px;
margin: 0 auto;
}
</style>
```

#### **OPTIONS API (~SRC/APP.VUE)**

```
<template>
<div id="app">
<div class='wrapper'>
```

```

<ejs-calendar :min="minDate" :max="maxDate" :value="dateVal" ></ejs-
calendar>
</div>
</div>
</template>
<script>
import { CalendarComponent } from "@syncfusion/ej2-vue-calendars";
//Component registration
export default {
name: 'App',
components: {
"ejs-calendar": CalendarComponent
},
data () {
return {
minDate : new Date("05/09/2017"),
maxDate : new Date("05/15/2017"),
dateVal : new Date("05/11/2017")
}
}
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-calendars/styles/material.css";
.wrapper {
max-width: 250px;
margin: 0 auto;
}
</style>

```

The output will appear as follows:

## Date range in Vue Calendar component

Calendar provides an option to select a date value within a specified range by defining the min and max properties. The min date should always be lesser than the max date. If the value of `min` or `max` properties are changed through code behind, then update the `value` property to be set within the specified range. Or else, if the value is out of specified date range and less than min date, value property will be updated with the `min` date or, if the value is higher than max date, value property will be updated with the `max` date.

The following example allows you to select a date within the range of 7th to 27th days in a month.

### APP.VUE

```
<template>
  <div id="app">
    <div class='wrap'>
      <ejs-calendar id='calendar' :value='dateVal' :min='minVal'
:max='maxVal' placeholder='Select a Date'></ejs-calendar>
    </div>
  </div>
</template>
<script>
import Vue from "vue";
import { CalendarPlugin } from "@syncfusion/ej2-vue-calendars";
Vue.use(CalendarPlugin);
export default {
  data () {
    var today = new Date();
    var currentYear = today.getFullYear();
    var currentMonth = today.getMonth();
    var currentDay = today.getDate();
    return {
      dateVal: new Date(new Date().setDate(14)),
      minVal: new Date(currentYear, currentMonth, 7),
      maxVal: new Date(currentYear, currentMonth, 27),
    }
  }
}
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-vue-
calendars/styles/material.css";
  .wrap {
    margin: 35px auto;
    width: 240px;
  }
</style>
```

{% previewsample "page.domainurl/code-snippet/calendar/min-max-cs6" %}

## Globalization in Vue Calendar component

Globalization is the combination of internationalization and localization. You can adapt the component to various languages by parsing and formatting the date or number ([Internationalization](#)), and also add culture specific customization and translation to the text ([localization](#)).

By default, the Calendar date format, week, and month names are specific to American English culture. It uses the [Essential JavaScript 2 Internationalization](#) package to parse and format date object based on the culture using the official [UNICODE CLDR](#) JSON data. It provides the [loadCldr](#) method to load the culture-specific CLDR JSON data.

The Calendar component supports only the Gregorian type of calendar. All the Essential JS 2 component are specific to English culture ('en-US').

If you want to go with the different culture other than **English**, follow the below steps.

- Install the CLDR-Data package by using the below command (installs the CLDR JSON data).

To know more about CLDR data, refer to the [CLDR-Data](#) link.

```
npm install cldr-data --save
```

Once the package installed, you can find the culture specific JSON data under the location `/node_modules/cldr-data`.

- Now use the `loadCldr` method to load the culture specific CLDR JSON data from the installed location to `app.vue` file.
- Calendar displayed **Sunday** as the first day of week based on default culture ("en-US"). If you want to display the Calendar with loaded culture's first day of week, you need to import `weekdata.json` file from the `cldr-data/supplemental` as given in the code example.

```
`ts
```

```
//Load the loadCldr from ej2-base
```

```
import { loadCldr } from '@syncfusion/ej2-base';
```

```
import * as numberingSystems from 'cldr-data/supplemental/numberingSystems.json';
```

```
import * as gregorian from 'cldr-data/main/de/ca-gregorian.json';
```

```
import * as numbers from 'cldr-data/main/de/numbers.json';
```

```
import * as timeZoneNames from 'cldr-data/main/de/timeZoneNames.json';
```

```
import * as weekData from 'cldr-data/supplemental/weekdata.json'; // To load the culture based first day of week
```

```
loadCldr(numberingSystems, gregorian, numbers, timeZoneNames, weekData);
```

The **Localization** library allows you to localize default text content of the Calendar. The Calendar component has static text for **today** feature that can be changed to other cultures (Arabic, Deutsch, French, etc.) by defining the [locale](#) value and translation object.

Locale keywords | Text

today | Name of the button to choose Today date.

- Before changing the culture other than **English**, ensure that locale text for the concerned culture is loaded through **load** method of

[L10n](#) class.

```
`ts
//Load the L10n from ej2-base
import { L10n } from '@syncfusion/ej2-base';
//load the locale object to set the localized today value
L10n.load({
  'de': {
    'calendar': { today: 'heute' }
  }
});
`
```

- Set the culture by using the [locale](#) property.

The following example demonstrates the Calendar in **German** culture

#### **APP.VUE**

```
<template>
  <div id="app">
    <div class='wrap'>
      <ejs-calendar id='calendar' locale='de'></ejs-calendar>
    </div>
  </div>
</template>
<script>
import Vue from "vue";
import { loadCldr, L10n } from '@syncfusion/ej2-base';
import { CalendarPlugin } from "@syncfusion/ej2-vue-calendars";
// Here we have referred local json files for preview purpose
import * as numberingSystems from './numberingSystems.json';
import * as gregorian from './ca-gregorian.json';
import * as numbers from './numbers.json';
import * as timeZoneNames from './timeZoneNames.json';
Vue.use(CalendarPlugin);
loadCldr(numberingSystems, gregorian, numbers, timeZoneNames);
L10n.load({
```

```

    'de': {
      'calendar': { today: 'heute' }
    }
  });
export default {}
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-vue-
  calendars/styles/material.css";
  .wrap {
    margin: 0px auto;
    width: 240px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/calendar/internationalization-cs1" %}

### Right-to-Left

The Calendar supports right-to-left functionality for languages like Arabic, Hebrew, etc. To display text in the right-to-left direction, use

[enableRtl](#) property.

The following code example initializes the Calendar component in **Arabic** culture.

### APP.VUE

```

<template>
  <div id="app">
    <div class='wrap'>
      <ejs-calendar id='calendar' locale='ar' enableRtl='true'></ejs-
      calendar>
    </div>
  </div>
</template>
<script>
import Vue from "vue";
import { loadCldr, L10n } from '@syncfusion/ej2-base';
import { CalendarPlugin } from "@syncfusion/ej2-vue-calendars";
// Here we have referred local json files for preview purpose
import * as numberingSystems from './numberingSystems.json';
import * as gregorian from './ca-gregorian.json';
import * as numbers from './numbers.json';
import * as timeZoneNames from './timeZoneNames.json';
Vue.use(CalendarPlugin);
loadCldr(numberingSystems, gregorian, numbers, timeZoneNames);
L10n.load({
  'ar': {
    'calendar': { today: "اليوم" }
  }
});
export default {}
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";

```

```

@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
calendars/styles/material.css";
.wrap {
    margin: 0px auto;
    width: 240px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/calendar/rtl-cs1" %}

### Customization in Vue Calendar component

Each day cell of the Calendar can be customized by using the [renderDayCell](#)

event.

The following section demonstrates how to disable or highlight specific dates in the Calendar.

#### Disable weekends

You can disable weekends of every month in the Calendar by using the [renderDayCell](#) event. The [renderDayCell](#) event offers the following arguments on each day cell creation to help you disable the dates.

| **View** | **Description** |

| --- | --- |

| **date** | Defines the current date of the Calendar. |

| **isDisabled** | Specifies whether the current date is to be disabled or not. |

| **isOutOfRange** | Defines whether the current date is out of range or not. |

The following example demonstrates how to disable weekends of every month.

#### APP.VUE

```

<template>
  <div id="app">
    <div class='wrap'>
      <ejs-calendar id='calendar' :renderDayCell="disableDate" ></ejs-
calendar>
    </div>
  </div>
</template>
<script>
import Vue from "vue";
import { CalendarPlugin } from "@syncfusion/ej2-vue-calendars";
Vue.use(CalendarPlugin);
export default {
  methods: {
    disableDate: function(args) {
      if (args.date.getDay() === 0 || args.date.getDay() === 6) {
        args.isDisabled = true;
      }
    }
  }
}

```

```

</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-vue-
  calendars/styles/material.css";
  .wrap {
    margin: 35px auto;
    width: 240px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/calendar/min-max-cs4" %}

### Day cell format

You can also highlight specific dates by adding custom CSS or element to the day cell by using the [renderDayCell](#) event. You can customize the appearance of the Calendar by overriding the existing styles. The following list of CSS class names are used to customize the Calendar component.

Class Name	Description
---   ---	
e-calendar	Applied to the Calendar.
e-header	Applied to the header.
e-title	Applied to the title.
e-icon-container	Applied to the previous and next icon container.
e-prev	Applied to the previous icon.
e-next	Applied to the next icon.
e-weekend	Applied to weekends.
e-other-month	Applied to days of other months.
e-day	Applied to each day cell.
e-selected	Applied to the selected dates.
e-disabled	Applied to the disabled dates.

The following example highlights the World Health Day (every 7th April) and World Forest Day (every 21st March) by using the custom icon and ToolTip.

### APP.VUE

```

<template>
  <div id="app">
    <div class='wrap'>
      <ejs-calendar id='calendar' :renderDayCell='load' ></ejs-
calendar>
    </div>
  </div>
</template>
<script>
import Vue from "vue";

```

```

import { CalendarPlugin } from "@syncfusion/ej2-vue-calendars";
import { addClass } from '@syncfusion/ej2-base';
Vue.use(CalendarPlugin);
export default {
  methods: {
    load: function(args) {
      let span;
      //Defines the custom HTML element to be added.
      span = document.createElement('span');
      //Uses "e-icons" class name to load Essential JS 2 built-in icons.
      span.setAttribute('class', 'e-icons highlight-day');
      if (+args.date.getDate() === 7 && +args.date.getMonth() === 3) {
        //Appends the span element to day cell.
        args.element.appendChild(span);
        //Sets the custom tooltip to the special dates.
        args.element.setAttribute('title', 'World health day!');
        //Uses "special" class name to highlight special dates that you can
        refer in "styles.css".
        args.element.className = 'special';
      }
      if (+args.date.getDate() === 21 && +args.date.getMonth() === 2) {
        args.element.appendChild(span);
        args.element.className = 'special';
        //Sets the custom tooltip to the special dates.
        args.element.setAttribute('title', 'World forest day');
      }
    }
  }
}
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-vue-
calendars/styles/material.css";
  .wrap {
    margin: 35px auto;
    width: 240px;
  }
  /* Custom - styles */
  span.special.e-day.e-ripple-style { /* csslint allow: adjoining-classes*/
    font-weight: bold;
    color: red;
  }
  span.e-icons.highlight-day { /* csslint allow: adjoining-classes*/
    color: red;
    margin-top: -13px;
    display: block;
    margin-left: 4px;
  }
  span.e-icons.highlight-day, /* csslint allow: adjoining-classes*/
  span.e-icons.highlight-day:before { /* csslint allow: adjoining-classes*/
    color: rgb(0, 0, 255);
  }
  span.e-icons.highlight-day:before { /* csslint allow: adjoining-classes*/
    content: "\e190";
    vertical-align: middle;
    margin-right: 3px;
  }

```

```

    font-size: 4px;
    position: relative;
    top: 1px;
    font-weight: normal;
}
span.special.e-day.e-ripple-style { /* csslint allow: adjoining-classes*/
    font-weight: bold;
    color: red;
}
.e-selected span.e-icons.highlight-day:before { /* csslint allow: adjoining-
classes*/
    color: #fff;
}

### Highlight Weekends

You can highlight the weekends of every month in a Calendar by using the [renderDayCell](#) event. The following example demonstrates how to highlights the weekends of every month.

#### APP.VUE

```

<template>
  <div id="app">
    <div class='wrap'>
      <ejs-calendar id='calendar' :renderDayCell="highlightWeekend"
    ></ejs-calendar>
    </div>
  </div>
</template>
<script>
import Vue from "vue";
import { CalendarPlugin } from "@syncfusion/ej2-vue-calendars";
Vue.use(CalendarPlugin);
export default {
  methods: {
    highlightWeekend: function(args) {
      if (args.date.getDay() === 0 || args.date.getDay() === 6) {
        // To highlight the week end of every month
        args.element.classList.add('e-highlightweekend');
      }
    }
  }
}

```

```

</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-vue-
  calendars/styles/material.css";
  .wrap {
    margin: 35px auto;
    width: 240px;
  }
  #date_label {
    display: block;
    width: 248px;
    color: rgba(0, 0, 0, 0.58);
    margin-left: 5px;
  }
  body.highcontrast #date_label {
    color: white;
  }
  .e-highlightweekend {
    background-color: #cfe9f3;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/calendar/highlight-weekend-cs1" %}

## Multi select in Vue Calendar component

Calendar provides an option to select **single** or **multiple dates** by using `isMultiSelection` and `values` properties. By default, `isMultiSelection` property will be in disabled state.

| API | Type | Description |

|-----|-----|-----|

| `isMultiSelection` | **Boolean** | Enables the multi-selection option in the Calendar control |

| `values` | **Date[]** | Gets or sets the date range values in multi-selection option |

The following example demonstrates the functionality of `isMultiSelection` property and `values` properties in the Calendar control.

### APP.VUE

```

<template>
  <div id="app">
    <div class='wrap'>
      <ejs-calendar id='calendar' ref="CalendarInstance"
      :isMultiSelection="isMultiSelection" :values="values" ></ejs-calendar>

```

```

        </div>
    </div>
</template>
<script>
import Vue from "vue";
import { CalendarPlugin } from "@syncfusion/ej2-vue-calendars";
Vue.use(CalendarPlugin);
export default {
    data () {
        return {
            isMultiSelection: true,
            values: [new Date('1/1/2020'), new Date('1/15/2020'), new
Date('1/3/2020'), new Date('1/25/2020')]
        }
    }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-calendars/styles/material.css";
.wrap {
    margin: 0px auto;
    max-width: 250px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/calendar/multi-selection-cs2" %}

### Calendar views in Vue Calendar component

The Calendar has the following predefined views that provide a flexible way to navigate back and forth when selecting dates.

#### | View | Description |

| --- | --- |

| month (default) | Displays the days in a month. |

| year | Displays the months in a year. |

| decade | Displays the years in a decade. |

When view is defined to the [start](#) property of the Calendar, it allows you to set the initial view on rendering.

The following example demonstrates how to set the **year** as the start view of the Calendar.

#### APP.VUE

```

<template>
    <div id="app">
        <div class='wrap'>
            <ejs-calendar id='calendar' :value='calVal' start='Year'></ejs-
calendar>
        </div>
    </div>
</template>

```

```

<script>
import Vue from "vue";
import { CalendarPlugin } from "@syncfusion/ej2-vue-calendars";
Vue.use(CalendarPlugin);
export default {
  data () {
    return {
      calVal: new Date()
    }
  }
}
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-vue-
calendars/styles/material.css";
  .wrap {
    margin: 35px auto;
    width: 240px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/calendar/min-max-cs2" %}

#### View restriction

By defining the [start](#) and [depth](#) property with the different view, drill-down and drill-up views navigation can be limited to the user. Calendar views will be drill-down up to the view which is set in **depth** property and drill-up up to the view which is set in **start** property.

The following example displays the Calendar in **decade** view, and allows you to select a date in **month** view.

Depth view should always be smaller than the start view. If the views are the same, then the Calendar view remains unchanged

#### APP.VUE

```

<template>
  <div id="app">
    <div class='wrap'>
      <ejs-calendar id='calendar' start='Decade' depth='Year'></ejs-
calendar>
    </div>
  </div>
</template>
<script>
import Vue from "vue";
import { CalendarPlugin } from "@syncfusion/ej2-vue-calendars";
Vue.use(CalendarPlugin);
export default {
  data () {
    return {
    }
  }
}

```

```

</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-vue-
  calendars/styles/material.css";
  .wrap {
    margin: 35px auto;
    width: 240px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/calendar/min-max-cs3" %}

### Accessibility in Vue Calendar component

The Calendar component followed the accessibility guidelines and standards, including [ADA, Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the Calendar component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2 Support](#) |  |

| [Section 508 Support](#) |  |

| [Screen Reader Support](#) |  |

| [Right-To-Left Support](#) |  |

| [Color Contrast](#) |  |

| [Mobile Device Support](#) |  |

| [Keyboard Navigation Support](#) |  |

| [Accessibility Checker Validation](#) |  |

| [Axe-core Accessibility Validation](#) |  |

<style>

.post .post-content img {

display: inline-block;

margin: 0.5em 0;

```

}
</style>

<div> - All
features of the component meet the requirement.</div>

<div> - Some features of the component do not meet the requirement.</div>

<div> - The
component does not meet the requirement.</div>

```

### WAI-ARIA attributes

The web accessibility makes web content and web applications more accessible for disabled people. It especially helps in dynamic content change and development of advanced user interface controls with AJAX, HTML, JavaScript, and related technologies.

Calendar provides built-in compliance with [WAI-ARIA](#) specifications. WAI-ARIA support is achieved through attributes like `aria-label`, `aria-selected`, `aria-disabled`, and `aria-activedescendant` applied for navigation buttons, and disable and active day cells.

It helps disabled persons by providing information about the widget for assistive technology in the screen readers. Calendar component contains grid role and grid cell for each day cell.

- **Aria-label:** This attribute provides text labels for an object for the previous and next month's elements. It helps the screen reader object to read.
- **Aria-selected:** Indicates the currently selected date of the Calendar component.
- **Aria-disabled:** Indicates the disabled state of the Calendar component.
- **Aria-activedescendant:** Helps in managing the current active child of the Calendar component.
- **Role:** Gives information to assistive technologies about how to handle each element in a widget.
- **Grid-cell:** Defines the individual cell that can be focused and selected.

### Keyboard interaction

You can use the following keys to interact with the Calendar. This component implements keyboard navigation support by following the [WAI-ARIA practices](#).

It supports the following list of shortcut keys:

| Press | To do this |

| --- | --- |

| Upper Arrow | Focuses the same day of the previous week. |

| Down Arrow | Focuses the same day of the next week. |

| Left Arrow | Focuses the day before. |

| Right Arrow | Focuses the next day. |

| Home | Focuses the first day of the month. |

| End | Focuses the last day of the month. |

| Page Up | Focuses the same date of the previous month. |

| Page Down | Focuses the same date of the next month. |

| Enter | Selects the currently focused date. |

| Shift + Page Up | Focuses the same date for the previous year. |

| Shift + Page Down | Focuses the same date for the next year. |

| Control + Upper Arrow | Moves to the inner level of view like month to year and year to decade. |

| Control + Down Arrow | Moves out from the depth level view like decade to year and year to month. |

| Control + Home | Focuses the first date of the current year. |

| Control + End | Focuses the last date of the current year. |

To focus the Calendar component, use **alt+t** keys.

#### APP.VUE

```
<template>
  <div id="app">
    <div class='wrap'>
      <ejs-calendar id='calendar' ref="CalendarInstance"></ejs-
calendar>
    </div>
  </div>
</template>
<script>
import Vue from "vue";
import { CalendarPlugin } from "@syncfusion/ej2-vue-calendars";
Vue.use(CalendarPlugin);
export default {
  mounted () {
    let calendarObj = this.$refs.CalendarInstance;
    document.onkeyup = function (e) {
      if (e.altKey && e.keyCode === 84) {
        // press alt+t to focus the control.
        calendarObj.$el.querySelectorAll('.e-content table')[0].focus();
      }
    }
  }
}
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-vue-
calendars/styles/material.css";
  .wrap {
    margin: 35px auto;
    width: 240px;
  }
</style>
```

{% previewsample "page.domainurl/code-snippet/calendar/min-max-cs1" %}

### Ensuring accessibility

The Calendar component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Calendar component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Calendar component with accessibility tools.

```
{% previewsample "https://ej2.syncfusion.com/accessibility/calendar.html" %}
```

### Islamic calendar in Vue Calendar component

In addition to the Gregorian calendar, the Calendar control supports displaying the Islamic calendar (Hijri calendar). **Islamic calendar** or **Hijri calendar** is a **lunar calendar** consisting of 12 months in a year of 354 or 355 days. To know more about Islamic calendar, please refer this [wikipedia](#).

Also, it consists of all Gregorian calendar functionalities as like min and max date, week number, start day of the week, multi selection enable RTL, start and depth view, localization, highlight and customize the specific dates.

By default, calendar mode is in **Gregorian**. You can enable the Islamic mode by setting the **calendarMode** as **Islamic**. Also, need to import and injecting the **Islamic** module into the **provide** section from **ej2-vue-calendars** as shown below.

```
import { Islamic, CalendarPlugin } from '@syncfusion/ej2-vue-calendars';\
```

```
Vue.use(CalendarPlugin);
```

The following example demonstrates how to display the Islamic Calendar (Hijri Calendar).

#### APP.VUE

```
<template>
  <div id="app">
    <div class='wrap'>
      <ejs-calendar :renderDayCell="load" :calendarMode="type"
:cssClass="cssClass"></ejs-calendar>
    </div>
  </div>
</template>
<script>
import Vue from "vue";
import { CalendarPlugin, Islamic } from "@syncfusion/ej2-vue-calendars";
import { addClass } from "@syncfusion/ej2-base";
Vue.use(CalendarPlugin);
export default {
  data () {
    return {
      cssClass: "e-customStyle",
      type : "Islamic",
    }
  },
  methods: {
    load: function(args) {
```

```

    /*Date need to be disabled*/
    if (args.date.getDate() === 12 || args.date.getDate() === 17 ||
args.date.getDate() === 22) {
        args.isDisabled = true;
    }
    /*Date need to be customized*/
    if (args.date.getDate() === 13) {
        let span = document.createElement('span');
        args.element.children[0].className += 'e-day sf-icon-cup highlight';
        addClass([args.element], ['special', 'e-day', 'dinner']);
        args.element.setAttribute('data-val', ' Dinner !');
        args.element.appendChild(span);
    }
    if (args.date.getDate() === 23) {
        let span = document.createElement('span');
        args.element.children[0].className += 'e-day sf-icon-start highlight';
        span.setAttribute('class', 'sx !');
        //use the imported method to add the multiple classes to the given
element
        addClass([args.element], ['special', 'e-day', 'holiday']);
        args.element.setAttribute('data-val', ' Holiday !');
        args.element.appendChild(span);
    }
}
},
provide: {
    calendar: [Islamic]
}
});
</script>
<style>
    @import "../node_modules/@syncfusion/ej2-base/styles/material.css";

## Two way binding in Vue Calendar component

Two-way binding can be achieved by using the `v-model` directive in Vue. In the following sample, when you change the value in one Calendar component, `v-model` will automatically update the value in the other Calendar.

The following example demonstrates how to set the **two-way-binding** in the Calendar.

## APP.VUE

```

<template>
<div id="app">
  <div id="wrapper1">
    <ejs-calendar id="calendar" v-model="date"></ejs-calendar>
  </div>
  <div id="wrapper2">
    <ejs-calendar id="calendar1" v-model="date"></ejs-calendar>
  </div>
</div>
</template>
<script>
import Vue from "vue";
import { CalendarPlugin } from "@syncfusion/ej2-vue-calendars";
Vue.use(CalendarPlugin);
export default {
  data: function() {
    return {
      date: new Date()
    };
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
calendars/styles/material.css";
#wrapper1{
  max-width: 300px;
  float: left;
  margin-left: 100px;
}
#wrapper2{
  max-width: 300px;
  float: right;
  margin-right: 100px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/calendar/two-way-cs1" %}

### Style appearance in Vue Calendar component

The following content provides the exact CSS structure that can be used to modify the control's appearance based on the user preference.

#### Customizing the background color for the Calendar

Use the following CSS to customize the background color and border for the Calendar.

,

*/ To specify background color and border /*

```

.e-calendar {
background-color: peachpuff;
border: 3px solid red;

```

```
}  
`
```

### Customizing the Calendar date elements on hovering

Use the following CSS to customize the date elements on hovering in the Calendar.

```
`
```

*/ To specify background color, color, and border /*

```
.e-calendar .e-content td:hover span.e-day, .e-calendar .e-content td:focus span.e-day, .e-bigger.e-small  
.e-calendar .e-content td:hover span.e-day, .e-bigger.e-small .e-calendar .e-content td:focus span.e-day  
{  
background-color: red;  
border: 2px solid;  
color: #212529;  
}
```

```
`
```

### Customizing the border of date cell grid

Use the following CSS to add the border to the date cell grid.

```
`
```

*/ To specify border /*

```
.e-calendar .e-content span.e-day, .e-bigger.e-small .e-calendar .e-content span.e-day {  
border: 1px solid;  
}
```

```
`
```

### Customizing the Calendar title

Use the following CSS to customize the Calendar title.

```
`
```

*/ To specify color and font size /*

```
.e-calendar .e-header .e-title, .e-bigger.e-small .e-calendar .e-header .e-title {  
color: black;  
font-size: 20px;  
}
```

```
`
```

### Customizing the previous and next icon

Use the following CSS to customize the previous and next icon.

```
`
```

*/ To specify color and border /*

```
.e-calendar .e-header span, .e-bigger.e-small .e-calendar .e-header span {  
border: 1px solid;  
color: chocolate;  
}  
`
```

#### Customizing the footer button

Use the following CSS to customize the footer button.

```
`  
  
/ To specify background color, color, and border-color /  
  
.e-calendar .e-btn.e-today.e-flat.e-primary, .e-calendar .e-css.e-btn.e-today.e-flat.e-primary {  
background-color: red;  
border-color: black;  
color: black;  
}  
`
```

#### Customizing the selected date cell grid

Use the following CSS to customize the selected date cell grid in Calendar.

```
`  
  
/ To specify background color and color /  
  
.e-calendar .e-content td.e-focused-date.e-today span.e-day {  
background-color: maroon;  
color: #fff;  
}  
`
```

#### Customizing the content header in Calendar

Use the following CSS to customize the content header in Calendar.

```
`  
  
/ To specify background /  
  
.e-calendar .e-content thead, .e-bigger.e-small .e-calendar .e-content thead {  
background: aquamarine;  
}  
`
```

## How To

## Set clear button in calendar in Vue Calendar component

To configure **clear** button in Calendar UI, do the following:

1. To the **created** event of the Calendar, add the required elements to make the clear button visible. In the following example, div with Essential JS 2 button component is used.
2. When the **e-footer** class is used, the div tag acts as the footer.
3. Using these button, selected date can be cleared.
4. Bind the required event handler to the button tags to update the value.

**APP.VUE**

```
<template>
  <div id="app">
    <div class='wrap'>
      <ejs-calendar id='calendar' :created='onCreate'
ref="CalendarInstance"></ejs-calendar>
    </div>
  </div>
</template>
<script>
import Vue from "vue";
import { CalendarPlugin } from "@syncfusion/ej2-vue-calendars";
Vue.use(CalendarPlugin);
export default {
  methods: {
    onCreate: function(args) {
      let calendarObj = this.$refs.CalendarInstance;
      let clearBtn = document.createElement('button');
      let footerElement = document.getElementsByClassName('e-
footer-container')[0];
      clearBtn.className = 'e-btn e-clear e-flat';
      clearBtn.textContent = 'Clear';
      footerElement.prepend(clearBtn);
      calendarObj.$el.appendChild(footerElement);
      document.querySelector('.e-footer-container .e-
clear').addEventListener('click', function () {
        calendarObj.value = null;
        calendarObj.dataBind();
      });
    }
  }
}
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-vue-
calendars/styles/material.css";
  .wrap {
    margin: 35px auto;
    width: 240px;
  }
  .e-clear {
```

```
margin-right: 81px;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/calendar/min-max-cs9" %}

### Customize the calendar day header in Vue Calendar component

You can change the format of the day that to be displayed in header using [dayHeaderFormat](#) property. By default, the format is **Short**.

You can find the possible formats on below.

Name	Description
Short	Sets the short format of day name (like Su ) in day header.
Narrow	Sets the single character of day name (like S ) in day header.
Abbreviated	Sets the min format of day name (like Sun ) in day header.
Wide	Sets the long format of day name (like Sunday ) in day header.

### APP.VUE

```
<template>
  <div id="container">
    <div id='calendar'>
      <ejs-calendar dayHeaderFormat="Short" ref="calendarObj"></ejs-
calendar>
    </div>
    <div id="format">
      <label id="custom-input-label">Header Format Types</label>
      <ejs-dropdownlist id="select" :fields = "fields" :index =
"currentIndex" :dataSource = "items" :popupHeight= "popupHeight" :change=
"formatHandler">
      </ejs-dropdownlist>
    </div>
  </div>
</template>
<script>
import Vue from "vue";
import { CalendarPlugin } from "@syncfusion/ej2-vue-calendars";
import { DropDownListPlugin } from "@syncfusion/ej2-vue-dropdowns";
Vue.use(CalendarPlugin);
Vue.use(DropDownListPlugin);
export default {
  data () {
    return {
      items: [
        { sizeVal: 'Short' , sizeTxt: 'Short' },
        { sizeVal: 'Narrow' , sizeTxt: 'Narrow' },
        { sizeVal: 'Abbreviated' , sizeTxt: 'Abbreviated' },
        { sizeVal: 'Wide' , sizeTxt: 'Wide' },
      ],
      fields: { text: 'sizeTxt', value: 'sizeVal' },
      popupHeight: 200,
    }
  }
}
```

```

        currentIndex: 0,
        formatHandler: (args) => {
            this.$refs.calendarObj.dayHeaderFormat = args.value;
        }
    }
}
</script>
<style>
    @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
    @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
    @import "../node_modules/@syncfusion/ej2-vue-
calendars/styles/material.css";
    @import "../node_modules/@syncfusion/ej2-vue-
dropdowns/styles/material.css";
    #container{
        width: 100%;
    }
    #calendar {
        width: 60%;
        margin: 30px auto;
        display: inline-flex;
    }
    #format {
        width: 20%;
        margin-left: 8%;
        display: inline-block;
    }
    #select {
        height: 30px;
        width: 150px;
        margin-top: 10px;
    }
    #custom-input-label{
        font-size: 15px;
        font-weight: bold
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/calendar/header-format-cs1" %}

### Show dates of other months in Vue Calendar component

The following example demonstrates how to show dates of other months.

Using the styles below, you can bring the dates of other months to visibility from its hidden state.

,

```

<style>
.e-calendar .e-content tr.e-month-hide,
.e-calendar .e-content td.e-other-month>span.e-day {
display: block;
}

```

```
.e-calendar .e-content td.e-month-hide,
.e-calendar .e-content td.e-other-month {
pointer-events: auto;
touch-action: auto;
}
</style>
,
```

### APP.VUE

```
<template>
  <div id="app">
    <div class='wrap'>
      <ejs-calendar id='calendar'></ejs-calendar>
    </div>
  </div>
</template>
<script>
import Vue from "vue";
import { CalendarPlugin } from "@syncfusion/ej2-vue-calendars";
Vue.use(CalendarPlugin);
export default {
  return {
  }
}
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-vue-
calendars/styles/material.css";
  .wrap {
    margin: 0px auto;
    max-width: 250px;
  }
  .e-calendar .e-content tr.e-month-hide,
  .e-calendar .e-content td.e-other-month>span.e-day {
    display: block;
  }
  .e-calendar .e-content td.e-month-hide,
  .e-calendar .e-content td.e-other-month {
    pointer-events: auto;
    touch-action: auto;
  }
</style>
```

{% previewsample "page.domainurl/code-snippet/calendar/min-max-cs10" %}

Select a sequence of dates in calendar in Vue Calendar component

The following example demonstrates how to select the week dates of chosen date in the Calendar using [values](#) property, when [isMultiSelection](#) property is enabled. Methods of Moment.js is used in this sample for calculating the start and end of week from the selected date.

**APP.VUE**

```

<template>
  <div id="app">
    <div class="wrap" style="height:357px; display: inline-block;">
      <ejs-calendar id='calendar' ref="CalendarInstance"
        :isMultiSelection="isMultiSelection" :change="onChange"></ejs-calendar>
    </div>
    <div id="btncontainer">
      <ejs-button id="week" class="e-btn" v-
        on:click.native="onweekChange"> Week </ejs-button>
      <ejs-button id="workweek" class="e-btn" v-
        on:click.native="onworkweekChange"> Work Week </ejs-button>
    </div>
  </div>
</template>
<script>
import Vue from "vue";
import { CalendarPlugin } from "@syncfusion/ej2-vue-calendars";
import { ButtonPlugin } from "@syncfusion/ej2-vue-buttons";
import moment from "moment";
Vue.use(CalendarPlugin);
Vue.use(ButtonPlugin);
export default {
  data() {
    return {
      isMultiSelection: true
    }
  },
  methods: {
    onChange: function(args) {
      let startOfWeek = moment(args.value).startOf('week');
      let endOfWeek = moment(args.value).endOf('week');
      if
        (this.$refs.CalendarInstance.$el.classList.contains('workweek')) {
          this.getWeekArray(startOfWeek.day(1), endOfWeek.day(5));
        } else if
        (this.$refs.CalendarInstance.$el.classList.contains("week")) {
          this.getWeekArray(startOfWeek, endOfWeek);
        }
    },
    /*selected current week dates when click the button*/
    onweekChange: function() {
      if
        (this.$refs.CalendarInstance.$el.classList.contains('workweek')) {
          this.$refs.CalendarInstance.$el.classList.remove('workweek')
        }
        this.$refs.CalendarInstance.$el.classList.add('week');
    },
    onworkweekChange: function() {
      if (this.$refs.CalendarInstance.$el.classList.contains('week'))
      {
        this.$refs.CalendarInstance.$el.classList.remove('week')
      }
      this.$refs.CalendarInstance.$el.classList.add('workweek');
    },
    getWeekArray: function(startOfWeek, endOfWeek) {

```

```

        let days = [];
        let day = startOfWeek;
        while (day <= endOfWeek) {
            days.push(day.toDate());
            day = day.clone().add(1, 'd');
        }
        this.$refs.CalendarInstance.values = days;
    }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-calendars/styles/material.css";
.wrap {
    margin: 0px auto;
    max-width: 250px;
}
#app{
    max-width: 550px;
}
#btncontainer{
    float:right;
    margin-left:30px;
    margin-top: 75px;
    margin-right: 10px;
}
button#workweek {
    margin-left: 15px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/calendar/multi-selection-cs1" %}

### Skip a month in calendar in Vue Calendar component

The following example demonstrates how to skip a month in the Calendar while clicking the previous and next icons. In the example below, the [navigated](#) event is used to skip a month with [navigateTo](#) method.

#### APP.VUE

```

<template>
  <div id="app">
    <div class='wrap'>
      <ejs-calendar id='calendar' :navigated='onNavigate'
      ref='Calendar'></ejs-calendar>
    </div>
  </div>
</template>
<script>
import Vue from "vue";
import { CalendarPlugin } from "@syncfusion/ej2-vue-calendars";
Vue.use(CalendarPlugin);
export default {
  methods: {

```

```

        onNavigate: function(args){
            let date;
            if (args.event.currentTarget.classList.contains('e-next')) {
                //Increments the month while clicking the next icon.
                date = new Date(args.date.setMonth(args.date.getMonth() + 1));
            }
            if (args.event.currentTarget.classList.contains('e-prev')) {
                //Decrements the month while clicking the previous icon.
                date = new Date(args.date.setMonth(args.date.getMonth() - 1));
            }
            if (args.view == 'month') {+
                this.$refs.Calendar.navigateTo('month', date);
            }
        }
    }
}
</script>
<style>
    @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
    @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
    @import "../node_modules/@syncfusion/ej2-vue-
    calendars/styles/material.css";
    .wrap {
        margin: 0px auto;
        max-width: 250px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/calendar/min-max-cs11" %}

Render the calendar with week numbers in Vue Calendar component

You can enable `weekNumbers` in the Calendar by using the [weekNumber](#) property.

#### APP.VUE

```

<template>
    <div id="app">
        <div class='wrap'>
            <ejs-calendar id='calendar' :weekNumber='weeknumber'></ejs-
            calendar>
        </div>
    </div>
</template>
<script>
import Vue from "vue";
import { CalendarPlugin } from "@syncfusion/ej2-vue-calendars";
Vue.use(CalendarPlugin);
export default {
    data () {
        return {
            weeknumber : true
        }
    }
}
</script>
<style>

```

```

@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
calendars/styles/material.css";
.wrap {
    margin: 0px auto;
    max-width: 250px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/calendar/min-max-cs8" %}

### Change the first day of week in Vue Calendar component

The Calendar provides an option to change the first day of the week by using the [firstDayOfWeek](#) property. Generally, the day of the week starts from 0 (Sunday) and ends with 6 (Saturday).

By default, the first day of the week is culture specific.

The following example shows the Calendar with **Tuesday** as the first day of the week.

### APP.VUE

```

<template>
  <div id="app">
    <div class='wrap'>
      <ejs-calendar id='calendar' :firstDayOfWeek='firstDay'></ejs-
calendar>
    </div>
  </div>
</template>
<script>
import Vue from "vue";
import { CalendarPlugin } from "@syncfusion/ej2-vue-calendars";
Vue.use(CalendarPlugin);
export default {
  data () {
    return {
      firstDay : 2
    }
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
calendars/styles/material.css";
.wrap {
    margin: 0px auto;
    max-width: 250px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/calendar/getting-started-cs2" %}

## Card

### Getting Started with the Vue Card Component in Vue 2

This article provides a step-by-step guide for setting up a Vue 2 project using [Vue-CLI](#) and integrating the Syncfusion Vue Card component using the [Composition API](#) / [Options API](#).

#### Prerequisites

[System requirements for Syncfusion Vue UI components](#)

#### Dependencies

The Card is pure CSS component so no other package dependencies are needed to render the Card.

```
`js
|-- @syncfusion/ej2-layouts
`
```

#### Setting up the Vue 2 project

To generate a Vue 2 project using Vue-CLI, use the [vue create](#) command. Follow these steps to install Vue CLI and create a new project:

```
`bash
npm install -g @vue/cli
vue create quickstart
cd quickstart
npm run serve
`

or

`bash
yarn global add @vue/cli
vue create quickstart
cd quickstart
yarn run serve
`
```

When creating a new project, choose the option **Default ([Vue 2] babel, eslint)** from the menu.

```
E:\samples>vue create quickstart

Vue CLI v5.0.8
? Please pick a preset:
  Default ([Vue 3] babel, eslint)
> Default ([Vue 2] babel, eslint)
  Manually select features
```

Once the `quickstart` project is set up with default settings, proceed to add Syncfusion components to the project.

### Adding Syncfusion packages

Syncfusion packages are available at [npmjs.com](https://www.npmjs.com). To use Vue components, install the required npm package.

This article uses the [Vue card component](#) as an example. Install the `@syncfusion/ej2-vue-layouts` package by running the following command:

```
`bash
```

```
npm install @syncfusion/ej2-vue-layouts --save
```

```
`
```

or

```
`bash
```

```
yarn add @syncfusion/ej2-vue-layouts
```

```
`
```

### Import Syncfusion CSS styles

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, [CRG](#) and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to themes in a Vue project.

In this article, the `Material` theme is applied using CSS styles, which are available in installed packages. The necessary `Material` CSS styles for the Card component and its dependents were imported into the `<style>` section of `src/App.vue` file.

#### ~/SRC/APP.VUE

```
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-vue-layouts/styles/material.css';
</style>
```

### Creating Vue Sample

Add the HTML div element with `e-card` class into the `<template>` section of the `App.vue` file in `src` directory.

#### ~/SRC/APP.VUE

```
<template>
<div id="app">
<div class = "e-card">
Sample Card
</div>
</div>
</template>
```

### Adding a header and content

You can create Card with a header in a specific structure. For adding header you need to create a `div` element with `e-card-header` class added.

- You can include heading inside the Card header by adding a `div` element with `e-card-header-caption` class, and also content will be added by adding element with `e-card-content`. For detailed information, refer to the [Header and Content](#).

### ~/SRC/APP.VUE

```
<div class = "e-card">                                --> Root Element
<div class="e-card-header">                            --> Root Header Element
<div class="e-card-header-caption">                    --> Root Heading Element
<div class="e-card-header-title"></div>                --> Heading Title Element
</div>
<div class="e-card-content"></div>                    --> Card content Element
</div>
</div>
```

Here is the summarized code for the above steps in the `src/App.vue` file:

### APP.VUE

```
<template>
  <div id="app">
    <div id='container' style="margin:50px auto 0; width:100%;">
      <br>
      <div tabindex="0" class="e-card" id="basic">
        <div class="e-card-header">
          <div class="e-card-header-caption">
            <div class="e-card-title">Advanced UWP</div>
          </div>
        </div>
        <div class="e-card-content">
          Communicating with Windows 10 and Other Apps, the second in
          a five-part series written by Succinctly series
          author Matteo Pagani. To download the complete white paper,
          and other papers in the series, visit
          the White Paper section of Syncfusion's Technology Resource
          Portal.
        </div>
      </div>
    </div>
  </div>
</template>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-vue-layouts/styles/material.css";
</style>
```

### Running the Project

To run the project, use the following command:

```
`bash
```

```
npm run serve
```

```
,
```

```
or
```

```
`bash
```

```
yarn run serve
```

```
,
```

```
{% previewsample "page.domainurl/code-snippet/card/getting-started-cs1" %}
```

### Getting Started with the Vue Card Component in Vue 3

This article provides a step-by-step guide for setting up a [Vite](#) project with a JavaScript environment and integrating the Syncfusion Vue Card component using the [Composition API](#) / [Options API](#).

The **Composition API** is a new feature introduced in Vue.js 3 that provides an alternative way to organize and reuse component logic. It allows developers to write components as functions that use smaller, reusable functions called composition functions to manage their properties and behavior.

The **Options API** is the traditional way of writing Vue.js components, where the component logic is organized into a series of options that define the component's properties and behavior. These options include data, methods, computed properties, watchers, lifecycle hooks, and more.

#### Prerequisites

##### [System requirements for Syncfusion Vue UI components](#)

##### Set up the Vite project

A recommended approach for beginning with Vue is to scaffold a project using [Vite](#). To create a new Vite project, use one of the commands that are specific to either NPM or Yarn.

```
`bash
```

```
npm create vite@latest
```

```
,
```

```
or
```

```
`bash
```

```
yarn create vite
```

```
,
```

Using one of the above commands will lead you to set up additional configurations for the project as below:

1. Define the project name: We can specify the name of the project directly. Let's specify the name of the project as **my-project** for this article.

```
`bash
```

? Project name: » my-project

,

2. Select **Vue** as the framework. It will create a Vue 3 project.

`bash

? Select a framework: » - Use arrow-keys. Return to submit.

Vanilla

Vue

React

Preact

Lit

Svelte

Others

,

3. Choose **JavaScript** as the framework variant to build this Vite project using JavaScript and Vue.

`bash

? Select a variant: » - Use arrow-keys. Return to submit.

JavaScript

TypeScript

Customize with create-vue ↗

Nuxt ↗

,

4. Upon completing the aforementioned steps to create the **my-project**, run the following command to install its dependencies:

`bash

cd my-project

npm install

,

or

`bash

cd my-project

yarn install

,

Now that `my-project` is ready to run with default settings, let's add Syncfusion components to the project.

### Add Syncfusion Vue packages

Syncfusion Vue component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion Vue components in the project, install the corresponding npm package.

This article uses the [Vue Card component](#) as an example. To use the Vue Card component in the project, the `@syncfusion/ej2-vue-layouts` package needs to be installed using the following command:

```
`bash
```

```
npm install @syncfusion/ej2-vue-layouts --save
```

```
,
```

or

```
`bash
```

```
yarn add @syncfusion/ej2-vue-layouts
```

```
,
```

### Import Syncfusion CSS styles

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, [CRG](#) and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to themes in a Vue project.

In this article, `Material` theme is applied using CSS styles, which are available in installed packages. The necessary `Material` CSS styles for the Card component and its dependents were imported into the `<style>` section of `src/App.vue` file.

### ~/SRC/APP.VUE

```
<style>
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../node_modules/@syncfusion/ej2-vue-layouts/styles/material.css';
</style>
```

The order of importing CSS styles should be in line with its dependency graph.

### Adding a header and content

You can create Card with a header in a specific structure. For adding header you need to create a `div` element with `e-card-header` class added.

- You can include heading inside the Card header by adding a `div` element with `e-card-header-caption` class, and also content will be added

by adding element with `e-card-content`. For detailed information, refer to the [Header and Content](#).

### ~/SRC/APP.VUE

```
<div class = "e-card">                                --> Root Element
<div class="e-card-header">                            --> Root Header Element
<div class="e-card-header-caption">                    --> Root Heading Element
```

```

<div class="e-card-header-title"></div>    --> Heading Title Element
</div>
<div class="e-card-content"></div>        --> Card content Element
</div>

```

### Adding Syncfusion Vue Card component in the application

You have completed all the necessary configurations needed for rendering the Syncfusion Vue component. Add the HTML div element with **e-card** class into the `<template>` section of the `App.vue` file in `src` directory.

#### COMPOSITION API (~SRC/APP.VUE)

```

<template>
<div id='container' style="margin:50px auto 0; width:100%;">
<br>
<div tabindex="0" class="e-card" id="basic">
<div class="e-card-header">
<div class="e-card-header-caption">
<div class="e-card-title">Advanced UWP</div>
</div>
</div>
<div class="e-card-content">
Communicating with Windows 10 and Other Apps, the second in a five-part
series written by Succinctly series
author Matteo Pagani. To download the complete white paper, and other papers
in the series, visit
the White Paper section of Syncfusion's Technology Resource Portal.
</div>
</div>
</div>
</template>
<script setup>
const data = [];
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-layouts/styles/material.css";
</style>

```

#### OPTIONS API (~SRC/APP.VUE)

```

<template>
<div id='container' style="margin:50px auto 0; width:100%;">
<br>
<div tabindex="0" class="e-card" id="basic">
<div class="e-card-header">
<div class="e-card-header-caption">
<div class="e-card-title">Advanced UWP</div>
</div>
</div>
<div class="e-card-content">
Communicating with Windows 10 and Other Apps, the second in a five-part
series written by Succinctly series

```

```
author Matteo Pagani. To download the complete white paper, and other papers
in the series, visit
the White Paper section of Syncfusion's Technology Resource Portal.
</div>
</div>
</div>
</template>
<script>
export default {
  name: 'App',
  components: {
  },
  data() {
    return {
    };
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-layouts/styles/material.css";
</style>
```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run dev
```

```
,
```

or

```
`bash
```

```
yarn run dev
```

```
,
```

The output will appear as follows:

#### Advanced UWP

Communicating with Windows 10 and Other Apps, the second in a five-part series written by Succinctly series author Matteo Pagani. To download the complete white paper, and other papers in the series, visit the White Paper section of Syncfusion's Technology Resource Portal.

### Header content in Vue Card component

#### Header

The Card can be created with header title, sub title and images. For adding header you need to create `div` element with the class `e-card-header` added.

Card provides below elements and corresponding class definitions to include header.

## Elements | Description

**e-card-header-caption** | To group the title and subtitle within the header which acts as wrapper.

**e-card-header-title** | Main title text within the header.

**e-card-sub-title** | A sub-title within the header.

**e-card-header-image** | To include heading image within the header.

**e-card-corner** | To add rounded corner for the image.

### *Title and Subtitle*

For adding header to the Card, you need to create wrapper **div** element with **e-card-header-caption** class.

- Place the **div** element with **e-card-header-title** class inside the header caption for adding main title.
- Place the **div** element with **e-card-sub-title** class inside the header caption element for adding sub-title.

### *Image*

Card header has an option for adding images in the header. It is aligned with either before or after the header based on the HTML element positioned in the header structure.

- The header image can be added by creating a **div** element with **e-card-header-image** class which can be placed before or after the header caption wrapper element.

## **APP.VUE**

```
<template>
  <div id="app">
    <div style="margin: 50px;">
      <div tabindex="0" class="e-card">
        <div class="e-card-header">
          <div class="e-card-header-image football e-card-
corner"></div>
          <div class="e-card-header-caption">
            <div class="e-card-header-title"> Laura Callahan</div>
            <div class="e-card-sub-title">Sales Coordinator and
Representative</div>
          </div>
        </div>
      </div>
    </div>
    <div style="margin-left: 50px;margin-top:30px">
      <div tabindex="0" class="e-card">
        <div class="e-card-header">
          <div class="e-card-header-caption">
            <div class="e-card-header-title"> Laura Callahan</div>
            <div class="e-card-sub-title">Sales Coordinator and
Representative</div>
          </div>
          <div class="e-card-header-image football"></div>
        </div>
      </div>
    </div>
  </div>
</template>
```

```

        </div>
      </div>
    </div>
  </template>
  <script>
import Vue from 'vue';
export default {
  name: 'app',
}
</script>
<style>
  @import '../node_modules/@syncfusion/ej2-base/styles/material.css';
  @import '../node_modules/@syncfusion/ej2-vue-
layouts/styles/material.css';
.e-card .e-card-header .e-card-header-image.football {
  background-image: url('../football.png');
}
.e-card {
  width: 300px
}
</style>

```

{% previewsample "page.domainurl/code-snippet/card/header-content/image-cs1" %}

## Content

Content in Card holds texts, images, links and all possible HTML elements. Its adaptable within the Card root element.

- Create a `div` element with the class `e-card-content`.
- Place content `div` element in the Card root element or within any Card inner elements.

## APP.VUE

```

<template>
  <div id="app">
    <div tabindex="0" class="e-card">
      <div class="e-card-header">
        <div class="e-card-header-image football"></div>
        <div class="e-card-header-caption">
          <div class="e-card-header-title"> Laura Callahan</div>
          <div class="e-card-sub-title">Sales Coordinator and
Representative</div>
        </div>
      </div>
      <div class="e-card-content">
        Laura received a BA in psychology from the University of
Washington. She has also completed a course in business French. She reads
and writes French.
      </div>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';

```

```
export default {
  name: 'app',
}
</script>
<style>
  @import '../node_modules/@syncfusion/ej2-base/styles/material.css';
  @import '../node_modules/@syncfusion/ej2-vue-
layouts/styles/material.css';
  .e-card .e-card-header .e-card-header-image.football {
    background-image: url('../football.png');
  }
  .e-card {
    width: 300px
  }
</style>
```

{% previewsample "page.domainurl/code-snippet/card/header-content/content-cs1" %}

## Card image in Vue Card component

### Images

The Card supports to include images within the elements, you can add image as direct element anywhere inside card root by adding the

**e-card-image** class to **div** element. Using the class defined, you can write CSS styles to load images to that element.

By default, card images occupies full width of its parent element.

,

```
<div class = "e-card">
  <div class="e-card-image">
  </div>
</div>
```

,

### Title

Card image is supported to include a title or caption for the image. By default, Title is placed over the image on left-bottom position with

overlay.

,

```
<div class = "e-card">
  <div class="e-card-image">
    <div class="e-card-title"></div>
  </div>
</div>
```

,

**APP.VUE**

```

<template>
  <div id="app">
    <div class="e-card">
      <div class="e-card-image">
        <div class="e-card-title">JavaScript </div>
      </div>
      <div class="e-card-content"> JavaScript Succinctly was written
to give readers an accurate, concise examination of JavaScript objects and
their supporting nuances, such as complex values, primitive values, scope,
inheritance, the head object, and more. </div>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
export default {
  name: 'app',
}
</script>
<style>
  @import '../node_modules/@syncfusion/ej2-base/styles/material.css';
  @import '../node_modules/@syncfusion/ej2-vue-
layouts/styles/material.css';
  .e-card-image {
    background: url('../sample.jpg');
    height: 160px;;
  }
  .e-card {
    width: 300px;
    margin: auto;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/card/images-divider/title-cs1" %}

**Divider**

Divider used to separate the elements inside the card. You can add divider inside the card elements to separate it.

- Place the `div` element with `e-card-separator` class inside the card element for adding a divider.

**APP.VUE**

```

<template>
  <div id="app">
    <div tabindex="0" class="e-card" id="basic">
      <div class="e-card-title">Explore Cities</div>
      <div class="e-card-separator"></div>
      <div class="e-card-content">
        Sydney is a city on the east coast of Australia. Sydney is
the capital city of New South Wales. About four million people
live in Sydney which makes it the biggest city in Oceania.
      </div>
    </div>
  </div>

```

```

        <div class="e-card-separator"></div>
        <div class="e-card-content">
            New York City has been described as the cultural, financial,
            and media capital of the world, and exerts a significant impact
            upon commerce and etc.,
        </div>
        <div class="e-card-separator"></div>
        <div class="e-card-content">
            Malaysia is one of the Southeast Asian countries, on a
            peninsula of the Asian continent, to a certain extent; it can be recognized
            as part of the Asian continent.
        </div>
    </div>
</template>
<script>
import Vue from 'vue';
export default {
    name: 'app',
}
</script>
<style>
    @import '../node_modules/@syncfusion/ej2-base/styles/material.css';
    @import '../node_modules/@syncfusion/ej2-vue-
    layouts/styles/material.css';
    #container {
        visibility: hidden;
    }
    #loader {
        color: #008cff;
        height: 40px;
        left: 45%;
        position: absolute;
        top: 45%;
        width: 30%;
    }
    .e-card {
        width: 300px
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/card/images-divider/divider-cs1" %}

## Action buttons in Vue Card component

You can include Action buttons within the Card and customize them. Action button is a `div` element with `e-card-actions` class followed by button tag or anchor tag within the card root element.

- For adding action buttons you can create button or anchor tag with `e-card-btn` class within the card action element.

```

<div class = "e-card">
<div class="e-card-actions">
<button class="e-card-btn"></button>
<a href="#"></a>
</div>
</div>

```

### Vertical

By default, action buttons positioned in horizontal alignment , and also it can be aligned to show in vertical alignment by adding `e-card-vertical` class.

```

<div class = "e-card">
<div class="e-card-actions e-card-vertical">
<button class="e-card-btn">More</button>
<a href="#">Share</a>
</div>
</div>

```

### APP.VUE

```

<template>
  <div id="app">
    <div style="margin: 50px;">
      <div class="e-card" style="max-width:400px">
        <div class="e-card-header-title">Eiffel Tower</div>
        <div class="e-card-content">
          The Eiffel Tower is acknowledged as the universal symbol of
          Paris and France.
        </div>
        <div class="e-card-actions">
          <button class="e-card-btn">
            
          </button>
          <button class="e-card-btn">
            
          </button>
          <button class="e-card-btn">
            
          </button>
        </div>
      </div>
    </div>
  </div>
</template>

```

```

        </div>
      </div>
      <div style="margin-left: 50px;">
        <div class="e-card" style="max-width:400px">
          <div class="e-card-header-title">Eiffel Tower</div>
          <div class="e-card-content">
            The Eiffel Tower is acknowledged as the universal symbol
of Paris and France.
          </div>
          <div class="e-card-actions e-card-vertical">
            <button class="e-card-btn">LIKE</button>
            <button class="e-card-btn">SHARE</button>
          </div>
        </div>
      </div>
    </div>
  </template>
  <script>
import Vue from 'vue';
export default {

### Horizontal in Vue Card component

By default, all the card elements are aligned vertically one after the other as in the DOM. You can achieve the element to align horizontally as well by adding the class `e-card-horizontal` in the root card element.

## Stacked cards

- An horizontally aligned card can push a specific column to align vertical using `e-card-stacked` class. This will align the stacked section vertically aligned differentiating from horizontal layout.

## Class | Description

`e-card-horizontal` | To align card elements horizontally.

`e-card-stacked` | To align elements vertically within the horizontal layout.

```

<div tabindex="0" class="e-card e-card-horizontal">
 --> Aligned in horizontal
<div class="e-card-stacked">    --> Aligned in horizontal
// Inside the element all are aligned vertical directions
</div>
</div>

```

**APP.VUE**

```

<template>
  <div id="app">
    <div style="margin: 50px;display: flex;flex-direction: row;justify-
content: center;">
      <div tabindex="0" class="e-card e-card-horizontal"
style="width:400px">
        
        <div class="e-card-stacked">
          <div class="e-card-header">
            <div class="e-card-header-caption">
              <div class="e-card-header-title">Philips
Trimmer</div>
            </div>
          </div>
          <div class="e-card-content">
            Powered by the innovative DuraPower Technology which
            optimizes power consumption, Philips trimmers are designed to last longer
            than 4 ordinary trimmers.
          </div>
        </div>
      </div>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
export default {
  name: 'app',
}
</script>

```

```

<style>
  @import '../node_modules/@syncfusion/ej2-base/styles/material.css';
  @import '../node_modules/@syncfusion/ej2-vue-
layouts/styles/material.css';
  #container {
    visibility: hidden;
  }
  #loader {
    color: #008cff;
    height: 40px;
    left: 45%;
    position: absolute;
    top: 45%;
    width: 30%;
  }
  .e-card {
    width: 300px
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/card/horizontal-cs1" %}

### Style in Vue Card component

The following content provides the exact CSS structure that can be used to modify the control's appearance based on user preference.

#### Customizing the card

Use the following CSS to customize the card properties.

,

```

.e-card {
background-color: aqua;
padding-left: 20px;
margin-bottom: 20px;
}

```

,

#### Customizing the Header element

Use the following CSS to customize the Header element properties.

,

```

.e-card .e-card-header {
font-family: cursive;
font-style: italic;
}

```

,

### Customizing the card content

Use the following CSS to customize the card content properties.

,

```
.e-card .e-card-content {  
font-size: 20px;  
color: gray;  
line-height: initial;  
font-weight: normal;  
}
```

,

### Divider used to separate the elements inside the card

Use the following CSS to customize the Divider used to separate the elements inside the card properties.

,

```
.e-card .e-card-separator {  
padding-bottom: 30px;  
}
```

,

### Including image within card element

Use the following CSS to Include image within card element.

,

```
.e-card .e-card-image {  
background-image: url(images.png);  
background-color: yellow;  
height: 160px;  
}
```

,

### Including a title or caption for the image

Use the following CSS to Include a title or caption for the image.

,

```
.e-card .e-card-image .e-card-title {  
font-family: cursive;  
font-style: italic;  
}
```

,

### To include heading image within the header

Use the following CSS to Include heading image within the header.

```
,  
  
.e-card .e-card-header .e-card-header-image {  
height: 48px;  
width: 48px;  
}  
,
```

### Customizing the Header main title

Use the following CSS to Customize the Header main title.

```
,  
  
.e-card .e-card-header .e-card-header-caption .e-card-header-title {  
font-size: large;  
color: aquamarine;  
}  
,
```

### Customizing the Header subtitle

Use the following CSS to Customize the Header subtitle.

```
,  
  
.e-card .e-card-header .e-card-header-caption .e-card-sub-title {  
font-size: 20px;  
font-variant: all-petite-caps;  
}  
,
```

### Including action buttons or anchor tags

Use the following CSS to Include action buttons or anchor tags.

```
,  
  
.e-card .e-card-actions .e-card-btn {  
padding-left: 20px;  
background-color: wheat;  
}  
,
```

### To align card elements horizontally

Use the following CSS to align card elements horizontally.

```

.e-card .e-card-horizontal {
margin: auto;
width: inherit;
}

```

To align elements vertically within the horizontal layout

Use the following CSS to align elements vertically within the horizontal layout.

```

.e-card .e-card-horizontal .e-card-stacked {
justify-content: flex-start;
margin: initial;
}

```

## How To

Customize the card image title position in Vue Card component

Card Image titles are placed as always Bottom-Left Corner only, You can manually customize to placing titles anywhere over the image by adding styles.

### APP.VUE

```

<template>
  <div id="app">
    <div>
      <div class="e-card">
        <div class="e-card-image">
          <div class="e-card-title">Node.js</div>
        </div>
        <div class="e-card-content">
          Node.js is a wildly popular platform for writing web
          applications that has revolutionized web development in many ways, enjoying
          support across the open source community as well as
          industry.
        </div>
      </div>
    </div>
    <div style="Margin: 5px 0;width:300px">

  @import '../..../node_modules/@syncfusion/ej2-base/styles/material.css';
  @import '../..../node_modules/@syncfusion/ej2-vue-
layouts/styles/material.css';
  #container {
    visibility: hidden;
  }
  #loader {
    color: #008cff;
    height: 40px;
    left: 45%;
    position: absolute;
    top: 45%;
    width: 30%;
  }
  .e-card-image {
    background: url('../sample.jpg');
    height: 164px;
  }
  .e-card {
    width: 200px;
    margin: auto;
  }
  .topleft {
    top: 0;
    bottom: auto !important;
  }
  .topright {
    top: 0;
    text-align: right;
    bottom: auto !important;
  }
  .bottomright {
    bottom: 0;
    right: 0;
    text-align: right;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/card/how-to/card\_image-cs1" %}

### Integrate other component inside the card in Vue Card component

You can integrate any component inside the card element. Here ListView component is placed inside the card for showcasing the To-Do list.

#### APP.VUE

```
<template>
  <div id="app">
    <div style="margin: 50px;">
      <!--element which is going to render the Card-->
      <div tabindex="0" class="e-card" id="basic">
        <div class="e-card-title">To-Do List</div>
        <div class="e-card-separator"></div>
        <div class="e-card-content">
          <div id='element'></div>
        </div>
      </div>
    </div>
  </div>
</template>
<script>
import Vue from 'vue';
import { ListView } from '@syncfusion/ej2-lists';
export default {
  name: 'app',
  data() {
  }, mounted() {
    //Initialize ListView component
    var listViewInstance: ListView = new ListView({
      dataSource: [
        { todoList: 'Pay Bills' },
        { todoList: 'Call Chris' },
        { todoList: 'Meet Andrew' },
        { todoList: 'Visit Manager' },
        { todoList: 'Customer Meeting' },
      ],
      //map the appropriate columns to fields property
      fields: { text: 'todoList' },
    }, "#element");
  }
}
</script>
<style>
  @import '../..../node_modules/@syncfusion/ej2-base/styles/material.css';
  @import '../..../node_modules/@syncfusion/ej2-vue-
layouts/styles/material.css';
  #container {
    visibility: hidden;
  }
  #loader {
    color: #008cff;
    height: 40px;
    left: 45%;
    position: absolute;
    top: 45%;
    width: 30%;
  }
</style>
```

```
}  
</style>
```

```
{% previewsample "page.domainurl/code-snippet/card/how-to/card_component-cs1" %}
```

## Carousel

### Getting Started with the Vue Carousel Component in Vue 2

This article provides a step-by-step guide for setting up a Vue 2 project using [Vue-CLI](#) and integrating the Syncfusion [Vue Carousel](#) component.

#### Prerequisites

[System requirements for Syncfusion Vue UI components](#)

#### Dependencies

The following list of dependencies are required to use the Carousel component in your application.

```
`js  
|-- @syncfusion/ej2-vue-navigations  
|-- @syncfusion/ej2-vue-base  
|-- @syncfusion/ej2-navigations  
|-- @syncfusion/ej2-base  
|-- @syncfusion/ej2-buttons  
`
```

#### Setting up the Vue 2 project

To generate a Vue 2 project using Vue-CLI, use the [vue create](#) command. Follow these steps to install Vue CLI and create a new project:

```
`bash  
npm install -g @vue/cli  
vue create quickstart  
cd quickstart  
npm run serve  
`
```

or

```
`bash  
yarn global add @vue/cli  
vue create quickstart  
cd quickstart  
yarn run serve  
`
```

When creating a new project, choose the option `Default ([Vue 2] babel, eslint)` from the menu.

```
E:\samples>vue create quickstart

Vue CLI v5.0.8
? Please pick a preset:
  Default ([Vue 3] babel, eslint)
> Default ([Vue 2] babel, eslint)
  Manually select features
```

Once the `quickstart` project is set up with default settings, proceed to add Syncfusion components to the project.

#### Add Syncfusion Vue packages

Syncfusion packages are available at [npmjs.com](https://www.npmjs.com). To use Vue components, install the required npm package.

This article uses the [Vue Carousel component](#) as an example. Install the `@syncfusion/ej2-vue-navigations` package by running the following command:

```
`bash
```

```
npm install @syncfusion/ej2-vue-navigations --save
```

```
,
```

or

```
`bash
```

```
yarn add @syncfusion/ej2-vue-navigations
```

```
,
```

#### Add Syncfusion Vue component

Follow the below steps to add the Vue Carousel component:

1\ First, import and register the Carousel component in the `script` section of the `src/App.vue` file.

##### ~/SRC/APP.VUE

```
<script>
import { CarouselComponent, CarouselItemDirective, CarouselItemsDirective }
  from "@syncfusion/ej2-vue-navigations";
export default {
  components: {
    'ejs-carousel': CarouselComponent,
    'e-carousel-item': CarouselItemDirective,
    'e-carousel-items': CarouselItemsDirective
  }
}
</script>
```

2\ In the `template` section, define the Carousel component.

~/SRC/APP.VUE

```

<template>
<div class="control-container">
<ejs-carousel>
<e-carousel-items>
<e-carousel-item template="<figure class='img-container'><img
src='https://ej2.syncfusion.com/products/images/carousel/cardinal.png'
alt='cardinal' style='height:100%;width:100%;' /><figcaption class='img-
caption'>Cardinal</figcaption></figure>"></e-carousel-item>
<e-carousel-item template="<figure class='img-container'><img
src='https://ej2.syncfusion.com/products/images/carousel/hunei.png'
alt='kingfisher' style='height:100%;width:100%;' /><figcaption class='img-
caption'>Kingfisher</figcaption></figure>"></e-carousel-item>
<e-carousel-item template="<figure class='img-container'><img
src='https://ej2.syncfusion.com/products/images/carousel/costa-rica.png'
alt='keel-billed-toucan' style='height:100%;width:100%;' /><figcaption
class='img-caption'>Keel-billed-toucan</figcaption></figure>"></e-carousel-
item>
<e-carousel-item template="<figure class='img-container'><img
src='https://ej2.syncfusion.com/products/images/carousel/kaohsiung.png'
alt='yellow-warbler' style='height:100%;width:100%;' /><figcaption
class='img-caption'>Yellow-warbler</figcaption></figure>"></e-carousel-item>
<e-carousel-item template="<figure class='img-container'><img
src='https://ej2.syncfusion.com/products/images/carousel/bee-eater.png'
alt='bee-eater' style='height:100%;width:100%;' /><figcaption class='img-
caption'>Bee-eater</figcaption></figure>"></e-carousel-item>
</e-carousel-items>
</ejs-carousel>
</div>
</template>

```

Here is the summarized code for the above steps in the **src/App.vue** file:

~/SRC/APP.VUE

```

<template>
  <div class="control-container">
    <ejs-carousel>
      <e-carousel-items>
        <e-carousel-item template="Cardinal"></e-carousel-item>
        <template v-slot:Cardinal>
          <figure class="img-container">
            
            <figcaption class="img-caption">Cardinal</figcaption>
          </figure>
        </template>
        <e-carousel-item template="kingfisher"></e-carousel-item>
        <template v-slot:kingfisher>
          <figure class="img-container">
            

```

```

        <figcaption class="img-caption">kingfisher</figcaption>
      </figure>
    </template>
    <e-carousel-item template="keel-billed-toucan"></e-carousel-item>
    <template v-slot:keel-billed-toucan>
      <figure class="img-container">
        
        <figcaption class="img-caption">keel-billed-toucan</figcaption>
      </figure>
    </template>
    <e-carousel-item template="yellow-warbler"></e-carousel-item>
    <template v-slot:yellow-warbler>
      <figure class="img-container">
        
        <figcaption class="img-caption">yellow-warbler</figcaption>
      </figure>
    </template>
    <e-carousel-item template="bee-eater"></e-carousel-item>
    <template v-slot:bee-eater>
      <figure class="img-container">
        
        <figcaption class="img-caption">bee-eater</figcaption>
      </figure>
    </template>
  </e-carousel-items>
</ejs-carousel>
</div>
</template>
<script>
  import { CarouselComponent, CarouselItemDirective, CarouselItemsDirective
} from "@syncfusion/ej2-vue-navigations";
  export default {
    components: {
      'ejs-carousel': CarouselComponent,
      'e-carousel-item': CarouselItemDirective,
      'e-carousel-items': CarouselItemsDirective
    },
    data: function () {
      return {};
    },
  };
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
.control-container {
  height: 360px;

```

```
margin: 0 auto;
width: 600px;
}
.img-container {
  height: 100%;
  margin: 0;
}
.img-caption {
  color: #fff;
  font-size: 1rem;
  position: absolute;
  bottom: 3rem;
  width: 100%;
  text-align: center;
}
</style>
```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run serve
```

```
,
```

or

```
`bash
```

```
yarn run serve
```

```
,
```

```
{% previewsample "page.domainurl/code-snippet/carousel/getting-started-cs1" %}
```

**Note:** You can also explore our [Vue Carousel example](#) that shows you how to render the Carousel in Vue.

### Getting Started with Syncfusion Vue Carousel Component in Vue 3

This article provides a step-by-step guide for setting up a [Vite](#) project with a JavaScript environment and integrating the Syncfusion Vue Carousel component using the [Composition API](#) / [Options API](#).

The **Composition API** is a new feature introduced in Vue.js 3 that provides an alternative way to organize and reuse component logic. It allows developers to write components as functions that use smaller, reusable functions called composition functions to manage their properties and behavior.

The **Options API** is the traditional way of writing Vue.js components, where the component logic is organized into a series of options that define the component's properties and behavior. These options include data, methods, computed properties, watchers, lifecycle hooks, and more.

#### Prerequisites

##### [System requirements for Syncfusion Vue UI components](#)

#### Setup the Vite project

A recommended approach for beginning with Vue is to scaffold a project using [Vite](#). To create a new Vite project, use one of the commands that are specific to either NPM or Yarn.

```
`bash
npm create vite@latest
`
```

or

```
`bash
yarn create vite
`
```

Using one of the above commands will lead you to set up additional configurations for the project as below:

1. Define the project name: We can specify the name of the project directly. Let's specify the name of the project as `my-project` for this article.

```
`bash
? Project name: » my-project
`
```

2. Select `Vue` as the framework. It will create a Vue 3 project.

```
`bash
? Select a framework: » - Use arrow-keys. Return to submit.
```

Vanilla

Vue

React

Preact

Lit

Svelte

Others

`

3. Choose `JavaScript` as framework variant to build this Vite project using JavaScript and Vue.

```
`bash
? Select a variant: » - Use arrow-keys. Return to submit.
```

JavaScript

TypeScript

Customize with create-vue ↗

Nuxt ↗

`

4. Upon completing the aforementioned steps to create the `my-project`, run the following command to install its dependencies:

```
`bash
cd my-project
npm install
`
or
`bash
cd my-project
yarn install
`
```

Now that `my-project` is ready to run with default settings, let's add Syncfusion Vue Carousel component to the project.

#### Adding Syncfusion Vue packages

Syncfusion Vue component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion Vue components in the project, install the corresponding npm package.

This article uses the [Vue Carousel component](#) as an example. To use the `Vue Carousel` component in the project, the `@syncfusion/ej2-vue-navigations` package needs to be installed using the following command.

```
`bash
npm install @syncfusion/ej2-vue-navigations --save
`
or
`bash
yarn add @syncfusion/ej2-vue-navigations
`
```

#### Import Syncfusion CSS styles

You can import themes for the Syncfusion Vue component in various ways, such as using CSS or SASS styles from npm packages, CDN, [CRG](#) and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to themes in a Vue project.

In this article, `Material` theme is applied using CSS styles, which are available in installed packages. The necessary `Material` CSS styles for the Carousel component and its dependents were imported into the `<style>` section of the `src/App.vue` file.

```
`html
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
```

```
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-navigations/styles/material.css";
</style>
`
```

### Adding Syncfusion Vue Carousel component in the application

Follow the below steps to add the Vue Carousel component using **Composition API** or **Options API**:

1.First, import and register the Carousel component and its child directives in the **script** section of the **src/App.vue** file. If you are using the **Composition API**, you should add the **setup** attribute to the **script** tag to indicate that Vue will be using the **Composition API**.

#### **COMPOSITION API (~SRC/APP.VUE)**

```
<script setup>
import {
  CarouselComponent as EjsCarousel, CarouselItemsDirective as ECarouselItems,
  CarouselItemDirective as ECarouselItem
} from '@syncfusion/ej2-vue-navigations';
</script>
```

#### **OPTIONS API (~SRC/APP.VUE)**

```
<script>
import {
  CarouselComponent,
  CarouselItemDirective,
  CarouselItemsDirective,
} from '@syncfusion/ej2-vue-navigations';
</script>
```

2.Add the component definition in template section.

```
`html
<template>
<div class="control-container">
<ejs-carousel>
<e-carousel-items>
<e-carousel-item
  template="<figure class='img-container'><img
src='https://ej2.syncfusion.com/products/images/carousel/cardinal.png' alt='cardinal'
style='height:100%;width:100%;' /><figcaption class='img-caption'>Cardinal</figcaption></figure>"></e-
carousel-item>
<e-carousel-item
  template="<figure class='img-container'><img
src='https://ej2.syncfusion.com/products/images/carousel/hunei.png' alt='kingfisher'
```

```

style='height:100%;width:100%;' /><figcaption class='img-
caption'>Kingfisher</figcaption></figure>"></e-carousel-item>

<e-carousel-item

template="<figure class='img-container'><img
src='https://ej2.syncfusion.com/products/images/carousel/costa-rica.png' alt='keel-billed-toucan'
style='height:100%;width:100%;' /><figcaption class='img-caption'>Keel-billed-
toucan</figcaption></figure>"></e-carousel-item>

<e-carousel-item

template="<figure class='img-container'><img
src='https://ej2.syncfusion.com/products/images/carousel/kaohsiung.png' alt='yellow-warbler'
style='height:100%;width:100%;' /><figcaption class='img-caption'>Yellow-
warbler</figcaption></figure>"></e-carousel-item>

<e-carousel-item

template="<figure class='img-container'><img
src='https://ej2.syncfusion.com/products/images/carousel/bee-eater.png' alt='bee-eater'
style='height:100%;width:100%;' /><figcaption class='img-caption'>Bee-
eater</figcaption></figure>"></e-carousel-item>

</e-carousel-items>

</ejs-carousel>

</div>

</template>

```

Here is the summarized code for the above steps in the **src/App.vue** file:

#### **COMPOSITION API (~SRC/APP.VUE)**

```

<template>
<div class="control-container">
<ejs-carousel>
<e-carousel-items>
<e-carousel-item
template="<figure class='img-container'><img
src='https://ej2.syncfusion.com/products/images/carousel/cardinal.png'
alt='cardinal' style='height:100%;width:100%;' /><figcaption class='img-
caption'>Cardinal</figcaption></figure>"></e-carousel-item>
<e-carousel-item
template="<figure class='img-container'><img
src='https://ej2.syncfusion.com/products/images/carousel/hunei.png'
alt='kingfisher' style='height:100%;width:100%;' /><figcaption class='img-
caption'>Kingfisher</figcaption></figure>"></e-carousel-item>
<e-carousel-item
template="<figure class='img-container'><img
src='https://ej2.syncfusion.com/products/images/carousel/costa-rica.png'
alt='keel-billed-toucan' style='height:100%;width:100%;' /><figcaption
class='img-caption'>Keel-billed-toucan</figcaption></figure>"></e-carousel-
item>
<e-carousel-item

```

```

template=<"<figure class='img-container'><img
src='https://ej2.syncfusion.com/products/images/carousel/kaohsiung.png'
alt='yellow-warbler' style='height:100%;width:100%;' /><figcaption
class='img-caption'>Yellow-warbler</figcaption></figure>"></e-carousel-item>
<e-carousel-item
template=<"<figure class='img-container'><img
src='https://ej2.syncfusion.com/products/images/carousel/bee-eater.png'
alt='bee-eater' style='height:100%;width:100%;' /><figcaption class='img-
caption'>Bee-eater</figcaption></figure>"></e-carousel-item>
</e-carousel-items>
</ejs-carousel>
</div>
</template>
<script setup>
import {
CarouselComponent as EjsCarousel, CarouselItemsDirective as ECarouselItems,
CarouselItemDirective as ECarouselItem
} from '@syncfusion/ej2-vue-navigations';
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
navigations/styles/material.css";
.control-container {
height: 360px;
margin: 0 auto;
width: 600px;
}
.img-container {
height: 100%;
margin: 0;
}
.img-caption {
color: #fff;
font-size: 1rem;
position: absolute;
bottom: 3rem;
width: 100%;
text-align: center;
}
</style>

```

### **OPTIONS API (~SRC/APP.VUE)**

```

<template>
<div class="control-container">
<ejs-carousel>
<e-carousel-items>
<e-carousel-item
template=<"<figure class='img-container'><img
src='https://ej2.syncfusion.com/products/images/carousel/cardinal.png'
alt='cardinal' style='height:100%;width:100%;' /><figcaption class='img-
caption'>Cardinal</figcaption></figure>"></e-carousel-item>
<e-carousel-item

```

```

template=<figure class='img-container'><img
src='https://ej2.syncfusion.com/products/images/carousel/hunei.png'
alt='kingfisher' style='height:100%;width:100%;' /><figcaption class='img-
caption'>Kingfisher</figcaption></figure>"></e-carousel-item>
<e-carousel-item
template=<figure class='img-container'><img
src='https://ej2.syncfusion.com/products/images/carousel/costa-rica.png'
alt='keel-billed-toucan' style='height:100%;width:100%;' /><figcaption
class='img-caption'>Keel-billed-toucan</figcaption></figure>"></e-carousel-
item>
<e-carousel-item
template=<figure class='img-container'><img
src='https://ej2.syncfusion.com/products/images/carousel/kaohsiung.png'
alt='yellow-warbler' style='height:100%;width:100%;' /><figcaption
class='img-caption'>Yellow-warbler</figcaption></figure>"></e-carousel-item>
<e-carousel-item
template=<figure class='img-container'><img
src='https://ej2.syncfusion.com/products/images/carousel/bee-eater.png'
alt='bee-eater' style='height:100%;width:100%;' /><figcaption class='img-
caption'>Bee-eater</figcaption></figure>"></e-carousel-item>
</e-carousel-items>
</ejs-carousel>
</div>
</template>
<script>
import {
CarouselComponent,
CarouselItemDirective,
CarouselItemsDirective,
} from "@syncfusion/ej2-vue-navigations";
export default {
name: "App",
components: {
"ejs-carousel": CarouselComponent,
"e-carousel-items": CarouselItemsDirective,
"e-carousel-item": CarouselItemDirective
}}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-vue-
navigations/styles/material.css";
.control-container {
height: 360px;
margin: 0 auto;
width: 600px;
}
.img-container {
height: 100%;
margin: 0;
}
.img-caption {
color: #fff;
font-size: 1rem;
position: absolute;
bottom: 3rem;

```

```
width: 100%;  
text-align: center;  
}  
</style>
```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run dev
```

```
,
```

or

```
`bash
```

```
yarn run dev
```

```
,
```

The output will appear as follows:

Refer the sample [Vue 3 using Composition API Carousel getting started](#)

For migrating from Vue 2 to Vue 3, refer to the [migration](#) documentation.

- [Getting Started with Vue UI Components using Options API and TypeScript](#)

## Populating items in Vue Carousel component

In the Carousel, slides can be rendered in two ways as follows,

- Populating items using carousel item
- Populating items using data source

### Populating items using carousel item

When rendering the Carousel component using items binding, you can assign templates for each item separately or assign a common template to each item. You can also customize the slide transition interval for each item separately. The following example code depicts the functionality as item property binding.

#### APP.VUE

```
<template>
  <div class="control-container">
    <ejs-carousel>
      <e-carousel-items>
        <e-carousel-item template="Cardinal"></e-carousel-item>
        <template v-slot:Cardinal>
          <figure class="img-container">
            
            <figcaption class="img-caption">Cardinal</figcaption>
          </figure>
        </template>
        <e-carousel-item template="kingfisher"></e-carousel-item>
        <template v-slot:kingfisher>
          <figure class="img-container">
            
            <figcaption class="img-caption">kingfisher</figcaption>
          </figure>
        </template>
        <e-carousel-item template="keel-billed-toucan"></e-carousel-item>
        <template v-slot:keel-billed-toucan>
          <figure class="img-container">
            
            <figcaption class="img-caption">keel-billed-toucan</figcaption>
          </figure>
        </template>
        <e-carousel-item template="yellow-warbler"></e-carousel-item>
        <template v-slot:yellow-warbler>
          <figure class="img-container">
            

```

```

        <figcaption class="img-caption">yellow-warbler</figcaption>
      </figure>
    </template>
    <e-carousel-item template="bee-eater"></e-carousel-item>
    <template v-slot:bee-eater>
      <figure class="img-container">
        
        <figcaption class="img-caption">bee-eater</figcaption>
      </figure>
    </template>
  </e-carousel-items>
</ejs-carousel>
</div>
</template>
<script>
import Vue from "vue";
import { CarouselPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(CarouselPlugin);
export default {};
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
.control-container {
  height: 360px;
  margin: 0 auto;
  width: 600px;
}
.img-container {
  height: 100%;
  margin: 0;
}
.img-caption {
  color: #fff;
  font-size: 1rem;
  position: absolute;
  bottom: 3rem;
  width: 100%;
  text-align: center;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/carousel/default-cs17" %}

### Populating items using data source

When rendering the Carousel component using data binding, you can assign a common template only for all items using the [itemTemplate](#) property. You cannot set the interval for each item. The following example code depicts the functionality as data binding.

### APP.VUE

```
<template>
```

```

<div class="control-container">
  <ejs-carousel :dataSource="productItems"
:itemTemplate="productTemplate"></ejs-carousel>
</div>
</template>
<script>
import Vue from 'vue';
import { CarouselPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(CarouselPlugin);
var productVue = Vue.component("product", {
  template: `<figure class="img-container">
  <figcaption class="img-caption">{{data.Name}}</figcaption></figure>`,
  data() {
    return {
      data: {},
    };
  },
  computed: {},
  methods: {
    getImage: function (bird) {
      return "https://ej2.syncfusion.com/products/images/carousel/" + bird
+ ".png";
    },
    getAlt: function (altText) {
      return altText;
    }
  },
});
export default {
  data: function() {
    return {
      productItems: [
        { ID: 1, Name: "Cardinal", imageName: 'cardinal' },
        { ID: 2, Name: "Kingfisher", imageName: 'hunei' },
        { ID: 3, Name: "Keel-billed-toucan", imageName: 'costa-rica' },
        { ID: 4, Name: "Yellow-warbler", imageName: 'kaohsiung' },
        { ID: 5, Name: "Bee-eater", imageName: 'bee-eater' }
      ],
      productTemplate: function (e) {
        return {
          template: productVue
        };
      },
    };
  }
}
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
.control-container {
  height: 360px;
  margin: 0 auto;
  width: 600px;
}

```

```

}
.img-container {
  height: 100%;
  margin: 0;
}
.img-caption {
  color: #fff;
  font-size: 1rem;
  position: absolute;
  bottom: 3rem;
  width: 100%;
  text-align: center;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/carousel/default-cs18" %}

### Selection

The Carousel items will be populated from the first index of the Carousel items and can be customized using the following ways,

- Select an item using the property.
- Select an item using the method.

#### Select an item using the property

Using the [selectedIndex](#) property of the Carousel component, you can set the slide to be populated at the time of initial rendering else you can switch to the particular slide item.

### APP.VUE

```

<template>
  <div class="control-container">
    <ejs-carousel :selectedIndex="selectedIndex">
      <e-carousel-items>
        <e-carousel-item template="Cardinal"></e-carousel-item>
        <template v-slot:Cardinal>
          <figure class="img-container">
            
            <figcaption class="img-caption">Cardinal</figcaption>
          </figure>
        </template>
        <e-carousel-item template="kingfisher"></e-carousel-item>
        <template v-slot:kingfisher>
          <figure class="img-container">
            
            <figcaption class="img-caption">kingfisher</figcaption>
          </figure>
        </template>
        <e-carousel-item template="keel-billed-toucan"></e-carousel-item>
      </e-carousel-items>
    </ejs-carousel>
  </div>
</template>

```

```

    <template v-slot:keel-billed-toucan>
      <figure class="img-container">
        
        <figcaption class="img-caption">keel-billed-toucan</figcaption>
      </figure>
    </template>
    <e-carousel-item template="yellow-warbler"></e-carousel-item>
    <template v-slot:yellow-warbler>
      <figure class="img-container">
        
        <figcaption class="img-caption">yellow-warbler</figcaption>
      </figure>
    </template>
    <e-carousel-item template="bee-eater"></e-carousel-item>
    <template v-slot:bee-eater>
      <figure class="img-container">
        
        <figcaption class="img-caption">bee-eater</figcaption>
      </figure>
    </template>
  </e-carousel-items>
</ejs-carousel>
</div>
</template>
<script>
import Vue from "vue";
import { CarouselPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(CarouselPlugin);

  data: function () {
    return {
      selectedIndex: 3,
    };
  },
};
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
.control-container {
  height: 360px;
  margin: 0 auto;
  width: 600px;
}
.img-container {
  height: 100%;
  margin: 0;

```

```

    }
    .img-caption {
      color: #fff;
      font-size: 1rem;
      position: absolute;
      bottom: 3rem;
      width: 100%;
      text-align: center;
    }
  </style>

```

{% previewsample "page.domainurl/code-snippet/carousel/default-cs19" %}

*Select an item using the method*

Using the [prev](#) or [next](#) public method of the Carousel component, you can switch the current populating slide to a previous or next slide.

### **APP.VUE**

```

<template>
  <div>
    <ejs-button cssClass="e-info" v-
on:click.native="prevBtnClick">Previous</ejs-button>
    <ejs-button cssClass="e-info" v-
on:click.native="nextBtnClick">Next</ejs-button>
    <div class="control-container">
      <ejs-carousel>
        <e-carousel-items>
          <e-carousel-item template="Cardinal"></e-carousel-item>

  width: 100%;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/carousel/default-cs21" %}

Slide animation only applicable if the `partialVisible` is enabled.

The last slide will be displayed as a partial slide at the initial rendering when the `loop` and `partialVisible` properties are enabled.

The previous slide is not displayed at the initial rendering when the `loop` is disabled.

The following example code depicts the functionality of `partialVisible` and without `loop` functionalities.

#### APP.VUE

```
<template>
  <div class="control-container">
    <ejs-carousel :partialVisible="true" :loop="false">
      <e-carousel-items>
        <e-carousel-item template="Cardinal"></e-carousel-item>
        <template v-slot:Cardinal>
          <figure class="img-container">
            
            <figcaption class="img-caption">Cardinal</figcaption>
          </figure>
        </template>
        <e-carousel-item template="kingfisher"></e-carousel-item>
        <template v-slot:kingfisher>
          <figure class="img-container">
            
            <figcaption class="img-caption">kingfisher</figcaption>
          </figure>

## Navigators and indicators in Vue Carousel component

The navigators and indicators are used to transition the slides manually.

## Navigators

### Show or hide previous and next button

In navigators, the previous and next slide transition buttons are used to perform slide transitions manually. You can show/hide the navigators using the [buttonsVisibility](#) property. The possible property values are as follows:

- **Hidden** – the navigator's buttons are not visible.
- **Visible** – the navigator's buttons are visible.
- **VisibleOnHover** – the navigator's buttons are visible only when hovering over the carousel.

The following example depicts the code to show/hide the navigators in the carousel.

### APP.VUE

```
<template>
  <div class="control-container">
    <ejs-carousel buttonsVisibility="Visible">
      <e-carousel-items>
        <e-carousel-item template="Cardinal"></e-carousel-item>
        <template v-slot:Cardinal>
          <figure class="img-container">
            
            <figcaption class="img-caption">Cardinal</figcaption>

## Indicators

### Show or hide indicators

In indicators, the total slides and current slide state have been depicted. You can show/hide the indicators using the [showIndicators](#) property. The following example depicts the code to show/hide the indicators in the carousel.

### APP.VUE

```

<template>
  <div class="control-container">
    <ejs-carousel :showIndicators="true">
      <e-carousel-items>
        <e-carousel-item template="Cardinal"></e-carousel-item>
        <template v-slot:Cardinal>
          <figure class="img-container">
            
            <figcaption class="img-caption">Cardinal</figcaption>
          </figure>
        </template>
        <e-carousel-item template="kingfisher"></e-carousel-item>
        <template v-slot:kingfisher>
          <figure class="img-container">
            

```

```

        <figcaption class="img-caption">kingfisher</figcaption>
      </figure>
    </template>
    <e-carousel-item template="keel-billed-toucan"></e-carousel-item>
    <template v-slot:keel-billed-toucan>
      <figure class="img-container">
        
        <figcaption class="img-caption">keel-billed-toucan</figcaption>
      </figure>
    </template>
    <e-carousel-item template="yellow-warbler"></e-carousel-item>
    <template v-slot:yellow-warbler>
      <figure class="img-container">
        
        <figcaption class="img-caption">yellow-warbler</figcaption>
      </figure>
    </template>
    <e-carousel-item template="bee-eater"></e-carousel-item>
    <template v-slot:bee-eater>
      <figure class="img-container">
        
        <figcaption class="img-caption">bee-eater</figcaption>
      </figure>
    </template>
  </e-carousel-items>

### Indicators Types

Choose different types of indicators available using the [indicatorsType](#) property. The indicator types are categorized as follows:

- [Default Indicator](#)
- [Dynamic Indicator](#)
- [Fraction Indicator](#)
- [Progress Indicator](#)

### Default Indicator

A default indicator in a carousel is a set of dots that indicate the current position of the slide in the carousel. The Default indicator can be achieved by setting the [indicatorsType](#) to **Default**.

### APP.VUE

```

<template>
  <div class="control-container">
    <ejs-carousel :indicatorType="Default">
      <e-carousel-items>
        <e-carousel-item template="Cardinal"></e-carousel-item>
        <template v-slot:Cardinal>
          <figure class="img-container">
            
            <figcaption class="img-caption">Cardinal</figcaption>
          </figure>
        </template>
        <e-carousel-item template="kingfisher"></e-carousel-item>
        <template v-slot:kingfisher>
          <figure class="img-container">
            

```

```

        <figcaption class="img-caption">kingfisher</figcaption>
      </figure>
    </template>
    <e-carousel-item template="keel-billed-toucan"></e-carousel-item>
    <template v-slot:keel-billed-toucan>
      <figure class="img-container">
        
        <figcaption class="img-caption">keel-billed-toucan</figcaption>
      </figure>
    </template>
    <e-carousel-item template="yellow-warbler"></e-carousel-item>
    <template v-slot:yellow-warbler>
      <figure class="img-container">
        
        <figcaption class="img-caption">yellow-warbler</figcaption>
      </figure>
    </template>
    <e-carousel-item template="bee-eater"></e-carousel-item>
    <template v-slot:bee-eater>
      <figure class="img-container">
        
        <figcaption class="img-caption">bee-eater</figcaption>
      </figure>
    </template>

### Play button

#### Show or hide the play button

In the carousel, [autoPlay](#) actions have been controlled by using the [showPlayButton](#) property in the user interface. When you enable this property, the slide transitions are controlled using this play and pause button. This property depends on the [buttonsVisibility](#) property. The following example depicts the code to show the play button in the carousel.

### APP.VUE

```
<template>
  <div class="control-container">
    <ejs-carousel :showPlayButton="true">
      <e-carousel-items>
        <e-carousel-item template="Cardinal"></e-carousel-item>
        <template v-slot:Cardinal>
          <figure class="img-container">
            
            <figcaption class="img-caption">Cardinal</figcaption>
          </figure>
        </template>
        <e-carousel-item template="kingfisher"></e-carousel-item>
        <template v-slot:kingfisher>
          <figure class="img-container">
            
            <figcaption class="img-caption">kingfisher</figcaption>
          </figure>
        </template>
        <e-carousel-item template="keel-billed-toucan"></e-carousel-item>
        <template v-slot:keel-billed-toucan>
          <figure class="img-container">
            
            <figcaption class="img-caption">keel-billed-toucan</figcaption>
          </figure>
        </template>
      </e-carousel-items>
    </ejs-carousel>
  </div>
</template>
```

```

        style="height: 100%; width: 100%" />
        <figcaption class="img-caption">keel-billed-toucan</figcaption>
      </figure>
    </template>
    <e-carousel-item template="yellow-warbler"></e-carousel-item>
    <template v-slot:yellow-warbler>
      <figure class="img-container">
        
        <figcaption class="img-caption">yellow-warbler</figcaption>
      </figure>
    </template>
    <e-carousel-item template="bee-eater"></e-carousel-item>
    <template v-slot:bee-eater>
      <figure class="img-container">

## Animations and transitions in Vue Carousel component

### Animations

#### *Fade animation*

In Carousel, two built-in animations are provided for slide transitions. You can disable animation using the [animationEffect](#) property. By default, Slide animation is applied for the transition between slides.

The following demo depicts the example for fade animation,

#### **APP.VUE**

```
<template>
  <div class="control-container">
    <ejs-carousel animationEffect='Fade'>
      <e-carousel-items>
        <e-carousel-item template="Cardinal"></e-carousel-item>
        <template v-slot:Cardinal>
          <figure class="img-container">
            
            <figcaption class="img-caption">Cardinal</figcaption>
          </figure>
        </template>
        <e-carousel-item template="kingfisher"></e-carousel-item>
        <template v-slot:kingfisher>
          <figure class="img-container">
            
            <figcaption class="img-caption">kingfisher</figcaption>
          </figure>
        </template>
        <e-carousel-item template="keel-billed-toucan"></e-carousel-item>
        <template v-slot:keel-billed-toucan>
          <figure class="img-container">
            
            <figcaption class="img-caption">keel-billed-toucan</figcaption>
          </figure>
        </template>
        <e-carousel-item template="yellow-warbler"></e-carousel-item>
        <template v-slot:yellow-warbler>
          <figure class="img-container">
            
            <figcaption class="img-caption">yellow-warbler</figcaption>
          </figure>
        </template>
      </e-carousel-items>
    </ejs-carousel>
  </div>
</template>
```

```

        </figure>
      </template>
    <e-carousel-item template="bee-eater"></e-carousel-item>
    <template v-slot:bee-eater>
      <figure class="img-container">
        
        <figcaption class="img-caption">bee-eater</figcaption>
      </figure>
    </template>

  width: 100%;
  text-align: center;
}
</style>

```

```
{% previewsample "page.domainurl/code-snippet/carousel/default-cs1" %}
```

### Custom animation

In Carousel, you can use customized animation effects for slide transitions using the [Custom](#) option of the [animationEffect](#) property and apply custom animation css via [cssClass](#) property.

The following demo depicts the example for **parallax** custom animation,

### APP.VUE

```
<template>
```

```

<div class="control-container">
  <ejs-carousel animationEffect="Custom" cssClass="parallax">
    <e-carousel-items>
      <e-carousel-item template="Cardinal"></e-carousel-item>
      <template v-slot:Cardinal>
        <figure class="img-container">
          
          <figcaption class="img-caption">Cardinal</figcaption>
        </figure>
      </template>
      <e-carousel-item template="kingfisher"></e-carousel-item>
      <template v-slot:kingfisher>
        <figure class="img-container">
          
          <figcaption class="img-caption">kingfisher</figcaption>
        </figure>
      </template>
      <e-carousel-item template="keel-billed-toucan"></e-carousel-item>
      <template v-slot:keel-billed-toucan>
        <figure class="img-container">
          
          <figcaption class="img-caption">keel-billed-toucan</figcaption>
        </figure>
      </template>
      <e-carousel-item template="yellow-warbler"></e-carousel-item>
      <template v-slot:yellow-warbler>
        <figure class="img-container">
          
          <figcaption class="img-caption">yellow-warbler</figcaption>
        </figure>
      </template>
      <e-carousel-item template="bee-eater"></e-carousel-item>
      <template v-slot:bee-eater>
        <figure class="img-container">
          
          <figcaption class="img-caption">bee-eater</figcaption>
        </figure>
      </template>
    </e-carousel-items>
  </ejs-carousel>
</div>
</template>

```

```

<script>
import Vue from "vue";
import { CarouselPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(CarouselPlugin);
export default {};
</script>
<style>
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
.control-container {
    height: 360px;
    margin: 0 auto;
    width: 600px;
}
.img-container {
    height: 100%;
    margin: 0;
}
.img-caption {
    color: #fff;
    font-size: 1rem;

    text-align: center;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/carousel/default-cs2" %}

### Intervals between slides

Using the items property, you can set different intervals for each item to transition between slides. The default interval is **5000 ms** (5 seconds). The following example depicts the code for setting the different intervals between each item.

### APP.VUE

```

<template>
  <div class="control-container">
    <ejs-carousel>
      <e-carousel-items>
        <e-carousel-item template="Cardinal"></e-carousel-item>
        <template v-slot:Cardinal>
          <figure class="img-container">
            
            <figcaption class="img-caption">Cardinal</figcaption>
          </figure>
        </template>
        <e-carousel-item template="kingfisher"></e-carousel-item>
        <template v-slot:kingfisher>
          <figure class="img-container">

```

```

        
        <figcaption class="img-caption">kingfisher</figcaption>
    </figure>
</template>
<e-carousel-item template="keel-billed-toucan"></e-carousel-item>
<template v-slot:keel-billed-toucan>
    <figure class="img-container">
        
        <figcaption class="img-caption">keel-billed-toucan</figcaption>
    </figure>
</template>
<e-carousel-item template="yellow-warbler"></e-carousel-item>
<template v-slot:yellow-warbler>
    <figure class="img-container">
        
        <figcaption class="img-caption">yellow-warbler</figcaption>
    </figure>
</template>
<e-carousel-item template="bee-eater"></e-carousel-item>
<template v-slot:bee-eater>
    <figure class="img-container">
        
        <figcaption class="img-caption">bee-eater</figcaption>
    </figure>
</template>
</e-carousel-items>
</ejs-carousel>
</div>
</template>
<script>
import Vue from "vue";
import { CarouselPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(CarouselPlugin);
export default {
    data: function () {
        return {
            animation: { effect: "Fade" },
            firstInterval: 3000,
            secondInterval: 1000,
            thirdInterval: 2000,
            fourthInterval: 5000,
            fifthInterval: 6000,
        };
    },
};

```

```

</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
  .control-container {
    height: 360px;
    margin: 0 auto;
    width: 600px;
  }
  .img-container {
    height: 100%;
    margin: 0;
  }
  .img-caption {
    color: #fff;
    font-size: 1rem;
    position: absolute;
    bottom: 3rem;
    width: 100%;
    text-align: center;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/carousel/default-cs3" %}

**Note:** Interval property can accept value in terms of milliseconds.

### Auto play slides

In the carousel, all slides transitions are performed continuously after the specified or default intervals. You can enable or disable the auto slide transition using the [autoPlay](#) property. The following example depicts the code to enable or disable the auto slide transitions.

### APP.VUE

```

<template>
  <div class="control-container">
    <ejs-carousel :autoPlay="true">
      <e-carousel-items>
        <e-carousel-item template="Cardinal"></e-carousel-item>
        <template v-slot:Cardinal>
          <figure class="img-container">
            
            <figcaption class="img-caption">Cardinal</figcaption>
          </figure>
        </template>
        <e-carousel-item template="kingfisher"></e-carousel-item>
        <template v-slot:kingfisher>
          <figure class="img-container">

          <figcaption class="img-caption">yellow-warbler</figcaption>
        </figure>
      </template>
      <e-carousel-item template="bee-eater"></e-carousel-item>
      <template v-slot:bee-eater>
        <figure class="img-container">
          
          <figcaption class="img-caption">bee-eater</figcaption>
        </figure>
      </template>
    </e-carousel-items>
  </ejs-carousel>
</div>
</template>
<script>
  import Vue from "vue";
  import { CarouselPlugin } from "@syncfusion/ej2-vue-navigations";
  Vue.use(CarouselPlugin);
  export default {};
</script>
<style>
  @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
  @import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
  .control-container {
    height: 360px;
    margin: 0 auto;
    width: 600px;
  }
  .img-container {
    height: 100%;
    margin: 0;
  }
  .img-caption {
    color: #fff;
    font-size: 1rem;
    position: absolute;
    bottom: 3rem;
    width: 100%;
    text-align: center;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/carousel/default-cs5" %}

### Looping slides

In the carousel, slides transitions are repeated continuously when you reach the last slide by default. You can enable or disable the infinite slide transition using the [loop](#) property. The following example depicts the code to enable or disable the infinite slide transitions.

#### APP.VUE

```
<template>
  <div class="control-container">
    <ejs-carousel :loop="true">
      <e-carousel-items>
        <e-carousel-item template="Cardinal"></e-carousel-item>
        <template v-slot:Cardinal>
          <figure class="img-container">
            
            <figcaption class="img-caption">Cardinal</figcaption>
          </figure>
        </template>
        <e-carousel-item template="kingfisher"></e-carousel-item>
        <template v-slot:kingfisher>
          <figure class="img-container">
            
            <figcaption class="img-caption">kingfisher</figcaption>
          </figure>
        </template>
        <e-carousel-item template="keel-billed-toucan"></e-carousel-item>
        <template v-slot:keel-billed-toucan>
          <figure class="img-container">
            
            <figcaption class="img-caption">keel-billed-toucan</figcaption>
          </figure>
        </template>
        <e-carousel-item template="yellow-warbler"></e-carousel-item>
        <template v-slot:yellow-warbler>
          <figure class="img-container">
            
            <figcaption class="img-caption">yellow-warbler</figcaption>
          </figure>
        </template>
        <e-carousel-item template="bee-eater"></e-carousel-item>
        <template v-slot:bee-eater>
          <figure class="img-container">
            
            <figcaption class="img-caption">bee-eater</figcaption>
          </figure>
        </template>
      </e-carousel-items>
    </ejs-carousel>
  </div>
</template>
```

```

        style="height: 100%; width: 100%" />
        <figcaption class="img-caption">bee-eater</figcaption>
      </figure>
    </template>
  </e-carousel-items>
</ejs-carousel>
</div>
</template>
<script>
import Vue from "vue";

.img-container {
  height: 100%;
  margin: 0;
}
.img-caption {
  color: #fff;
  font-size: 1rem;
  position: absolute;
  bottom: 3rem;
  width: 100%;
  text-align: center;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/carousel/default-cs6" %}

### Slide changing events

Using the [slideChanging](#) or [slideChanged](#) events of the Carousel component, you can perform sample end customization while the carousel items are switched.

The following demo depicts the example for carousel events,

### APP.VUE

```

<template>
  <div class="control-container">
    <ejs-carousel :slideChanging="onSlideChanging"
    :slideChanged="onSlideChanged">
      <e-carousel-items>
        <e-carousel-item template="Cardinal"></e-carousel-item>
        <template v-slot:Cardinal>
          <figure class="img-container">

```

```

        
        <figcaption class="img-caption">Cardinal</figcaption>
    </figure>
</template>
<e-carousel-item template="kingfisher"></e-carousel-item>
<template v-slot:kingfisher>
    <figure class="img-container">
        
        <figcaption class="img-caption">kingfisher</figcaption>
    </figure>
</template>
<e-carousel-item template="keel-billed-toucan"></e-carousel-item>
<template v-slot:keel-billed-toucan>
    <figure class="img-container">
        
        <figcaption class="img-caption">keel-billed-toucan</figcaption>
    </figure>
</template>
<e-carousel-item template="yellow-warbler"></e-carousel-item>
<template v-slot:yellow-warbler>
    <figure class="img-container">
        
        <figcaption class="img-caption">yellow-warbler</figcaption>
    </figure>
</template>
<e-carousel-item template="bee-eater"></e-carousel-item>
<template v-slot:bee-eater>
    <figure class="img-container">
        
        <figcaption class="img-caption">bee-eater</figcaption>
    </figure>
</template>
</e-carousel-items>
</ejs-carousel>
</div>
</template>
<script>
import Vue from "vue";
import { CarouselPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(CarouselPlugin);
export default {
    methods: {

```

```

        onSlideChanging: function (args) {
            console.log(args.currentSlide); // You can customize the slide
before changing.
        },
        onSlideChanged: function (args) {
            console.log(args.currentSlide); // You can customize the slide after
changed.
        },
    },
};
</script>
<style>
    @import "../node_modules/@syncfusion/ej2-base/styles/material.css";
    @import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
    @import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
    .control-container {
        height: 360px;
        margin: 0 auto;
        width: 600px;
    }
    .img-container {
        height: 100%;
        margin: 0;
    }
    .img-caption {
        color: #fff;
        font-size: 1rem;
        position: absolute;
        bottom: 3rem;
        width: 100%;
        text-align: center;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/carousel/default-cs7" %}

### Disable touch swiping

In the carousel, you can swipe the carousel slides using touch actions by default. The swipe action can be enabled or disabled using the [enableTouchSwipe](#) property. The following example depicts the code to disable the swipe action for the slide.

### APP.VUE

```

<template>
    <div class="control-container">
        <ejs-carousel :enableTouchSwipe="false">
            <e-carousel-items>
                <e-carousel-item template="Cardinal"></e-carousel-item>
                <template v-slot:Cardinal>
                    <figure class="img-container">
                        
                        <figcaption class="img-caption">Cardinal</figcaption>
                    </figure>
                </template>
            </e-carousel-items>
        </ejs-carousel>
    </div>

```

```

    </template>
    <e-carousel-item template="kingfisher"></e-carousel-item>
    <template v-slot:kingfisher>
      <figure class="img-container">
        
        <figcaption class="img-caption">kingfisher</figcaption>
      </figure>
    </template>
    <e-carousel-item template="keel-billed-toucan"></e-carousel-item>
    <template v-slot:keel-billed-toucan>
      <figure class="img-container">
        
        <figcaption class="img-caption">keel-billed-toucan</figcaption>
      </figure>
    </template>
    <e-carousel-item template="yellow-warbler"></e-carousel-item>
    <template v-slot:yellow-warbler>
      <figure class="img-container">
        
        <figcaption class="img-caption">yellow-warbler</figcaption>
      </figure>
    </template>
    <e-carousel-item template="bee-eater"></e-carousel-item>
    <template v-slot:bee-eater>
      <figure class="img-container">
        
        <figcaption class="img-caption">bee-eater</figcaption>
      </figure>
    </template>
  </e-carousel-items>
</ejs-carousel>
</div>
</template>
<script>
import Vue from "vue";
import { CarouselPlugin } from "@syncfusion/ej2-vue-navigations";
Vue.use(CarouselPlugin);
export default {};
</script>

```

### Swipe Modes

In the carousel, the [swipeMode](#) property allows specifying whether the slide transition should occur while performing swiping via touch or mouse. The slide swiping is enabled or disabled using the bitwise operator.

The following are the different swipe modes available in the carousel:

- CarouselSwipeMode.Touch - Allows the user to slide the slides using touch actions.
- CarouselSwipeMode.Mouse - Allows the user to slide the slides using mouse actions.
- CarouselSwipeMode.Touch & CarouselSwipeMode.Mouse - Allows the user to slide the slides using both touch and mouse actions.
- ~CarouselSwipeMode.Touch & ~CarouselSwipeMode.Mouse - Disables both touch and mouse actions.

### APP.VUE

```

<template>
  <div class="control-container">
    <ejs-carousel :swipeMode=swipeModes>
      <e-carousel-items>
        <e-carousel-item template="Cardinal"></e-carousel-item>
        <template v-slot:Cardinal>
          <figure class="img-container">
            
            <figcaption class="img-caption">Cardinal</figcaption>
          </figure>
        </template>
        <e-carousel-item template="kingfisher"></e-carousel-item>
        <template v-slot:kingfisher>
          <figure class="img-container">

```

{% previewsample "page.domainurl/code-snippet/carousel/swipe-cs1" %}

### Accessibility in Vue Carousel component

The Carousel component has been designed, keeping in mind the [WAI-ARIA](#) specifications, and applying the WAI-ARIA roles, states and properties along with keyboard support for people who use assistive devices. WAI-ARIA accessibility support is achieved through attributes like `aria-roledescription`, `aria-label`, `aria-current`, `aria-live`, `aria-role` and `aria-hidden`. It provides information about elements in a document for assistive technology. The component implements keyboard navigation support by following the [WAI-ARIA practices](#) and has been tested in major screen readers.

The accessibility compliance for the Carousel component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2](#) Support |  |

| [Section 508](#) Support |  |

| Screen Reader Support |  |

| Right-To-Left Support |  |

| Color Contrast |  |

| Mobile Device Support |  |

| Keyboard Navigation Support |  |

| [Accessibility Checker](#) Validation |  |

| [Axe-core](#) Accessibility Validation |  |

<style>

.post .post-content img {

display: inline-block;

margin: 0.5em 0;

}

</style>

<div> - All features of the component meet the requirement.</div>

<div> - Some features of the component do not meet the requirement.</div>

<div> - The component does not meet the requirement.</div>

### ARIA attributes

The Carousel component is designed by considering [WAI-ARIA](#) standard. Carousel is supported with ARIA Accessibility which is accessible by on-screen readers and other assistive technology devices. The following list of attributes is added to the Carousel.

#### | Roles and Attributes | Functionalities

|

| ----- | -----  
----- |

| aria-roledescription | The role description attribute has been added for the root element (Carousel) and each Carousel slide item (slide). |

| aria-label | Previous, next and play/pause buttons and all indicator elements.

|

| aria-current | For the active item indicator element, `aria-current` is set to `true`.

|

| aria-hidden | For all carousel elements except the currently visible item, `aria-hidden` is set to `true`. |

| aria-live | For Carousel items element, when `autoPlay` is `true`, `aria-live` is set to `off`; when `autoPlay` is `false`, `aria-live` is set to `polite`. |

| aria-role | For carousel slide item, `aria-role` has been grouped.

|

### Keyboard interaction

By default, keyboard navigation is enabled. This component implements keyboard navigation support by following the WAI-ARIA practices. Once focused on the active Carousel element, you can use the following key combination for interacting with the Carousel.

Key	Description
Alt + J	Keys to focus the Carousel component (done at application end).
Arrows	Keys to navigate between slides.
Home	To navigate to the first slide.
End	To navigate to the last slide.
Space	To play/pause the slide transitions.
Enter	To perform the respective action on its focus.
Tab	To Move focus through the interactive elements.
Shift + Tab	To Move focus through the interactive elements.

### Ensuring accessibility

The Carousel component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Carousel component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Carousel component with accessibility tools.

```
{% previewsample "https://ej2.syncfusion.com/accessibility/carousel.html" %}
```

- [Accessibility in Syncfusion Vue components](#)

### Styles and appearance in Vue Carousel component

To modify the Carousel appearance, you need to override the default CSS of Carousel component. Please find the list of CSS classes and its corresponding section in Carousel component. Also, you have an option to create your own custom theme for the controls using our [Theme Studio](#).

### CSS Structure in Vue Carousel Control

The following content provides the exact CSS structure that can be used to modify the control's appearance based on user preference.

CSS Class | Purpose of Class

.e-carousel .e-carousel-item	To customize the carousel item
.e-carousel-item.e-active	To customize the active carousel item
.e-carousel .e-carousel-indicators	To customize the indicators
.e-carousel .e-carousel-indicators .e-indicator-bars .e-indicator-bar	To customize the indicator bars

|.e-carousel .e-carousel-indicators .e-indicator-bars .e-indicator-bar .e-indicator|To customize the individual indicator appearance

|.e-carousel .e-carousel-navigators|To customize the navigators

|.e-carousel .e-carousel-navigators .e-previous|To customize the previous button

|.e-carousel .e-carousel-navigators .e-next|To customize the next button

|.e-carousel .e-carousel-navigators .e-play-pause|To customize the play and pause button

|.e-carousel.e-partial .e-carousel-slide-container|To customize the partial visible slides

### Customizing the indicators

Use the following CSS to customize the space between indicators by overriding the `.e-indicator-bar` CSS class.

```
`css
.e-carousel .e-carousel-indicators .e-indicator-bars .e-indicator-bar {
padding: 8px;
}
`
```

Use the following CSS to customize the indicators appearance by overriding the `.e-indicator` CSS class.

```
`css
```

```
.e-carousel .e-carousel-indicators .e-indicator-bars .e-indicator-bar .e-indicator {
```

```
width: 20px;
```

```
border-radius: 100%;
```

```
}
```

```
,
```

```
(./images/indicators-size.png)
```

Use the following CSS to render the indicators outside the carousel items by overriding the `.e-carousel-indicators` CSS class.

```
`css
```

```
.e-carousel .e-carousel-indicators {
```

```
bottom: auto;
```

```
}
```

```
,
```

```
(./images/indicator-outside.png)
```

### Customizing the navigators

Use the following CSS to customize the previous and next icon size and colors.

```
`css
```

```
.e-carousel .e-carousel-navigators .e-next .e-btn:not(:disabled) .e-btn-icon,  
.e-carousel .e-carousel-navigators .e-previous .e-btn:not(:disabled) .e-btn-icon  
{  
  color: greenyellow;  
  font-size: 25px;  
}
```

Use the following CSS to customize the navigators position to bottom by overriding the `.e-carousel-navigators` CSS class.

```
`css  
.e-carousel .e-carousel-navigators {  
  top: 120px;  
}
```

Use the following CSS to render the previous and next icon to outside the carousel items by overriding the `.e-previous` and `.e-next` CSS class.

```
`css
.e-carousel .e-carousel-navigators .e-previous,
.e-carousel .e-carousel-navigators .e-next
{
margin: -60px;
background: black;
}
`
```

### Customizing partial slides size

You can customize the partial slide size by overriding the `.e-carousel-slide-container` CSS class.

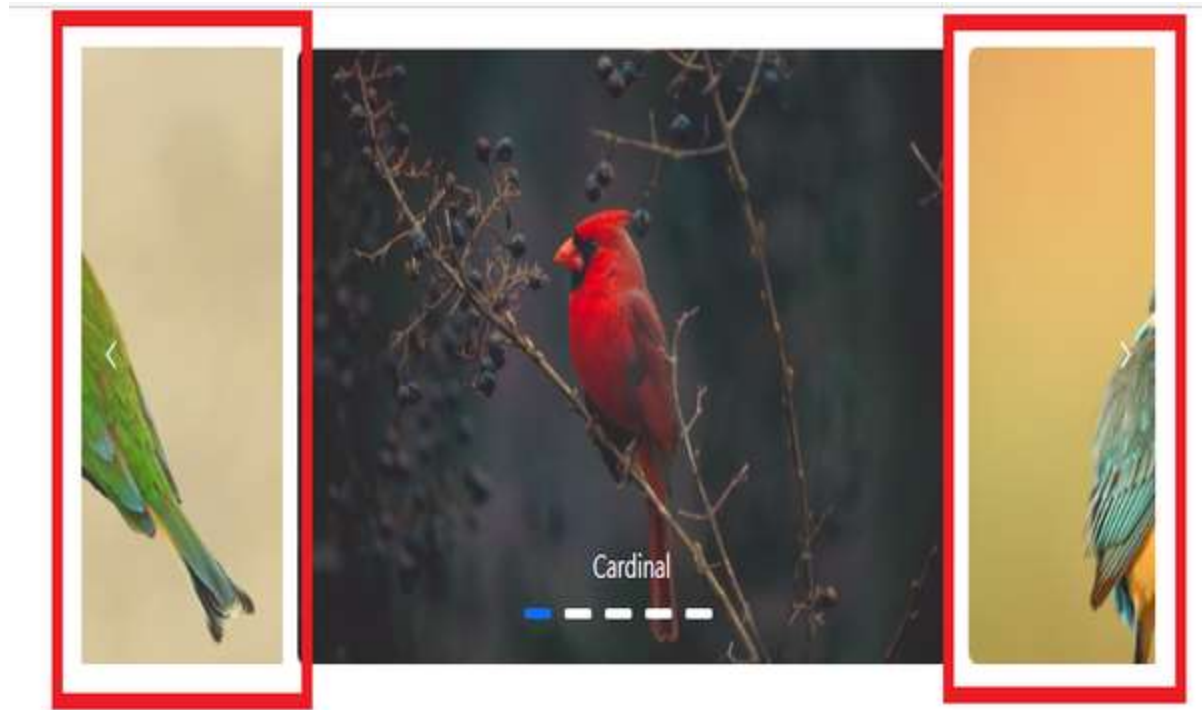

```
`css
```

```
.e-carousel.e-partial .e-carousel-slide-container{
```

```
padding: 0 150px;
```

```
}
```

```
`
```

## 3D Chart

### Getting started with the Vue 3D chart component in Vue 2

This article provides a step-by-step guide for setting up a Vue 2 project using [Vue-CLI](#) and integrating the Syncfusion Vue 3D Chart component.

#### Prerequisites

[System requirements for Syncfusion Vue UI components](#)

#### Dependencies

Below is the list of minimum dependencies required to use the 3D Chart component.

```
`javascript
|-- @syncfusion/ej2-vue-charts
|-- @syncfusion/ej2-base
|-- @syncfusion/ej2-data
|-- @syncfusion/ej2-pdf-export
|-- @syncfusion/ej2-file-utils
|-- @syncfusion/ej2-compression
|-- @syncfusion/ej2-charts
|-- @syncfusion/ej2-vue-base
|-- @syncfusion/ej2-svg-base
`,`
```

### Setting up the Vue 2 project

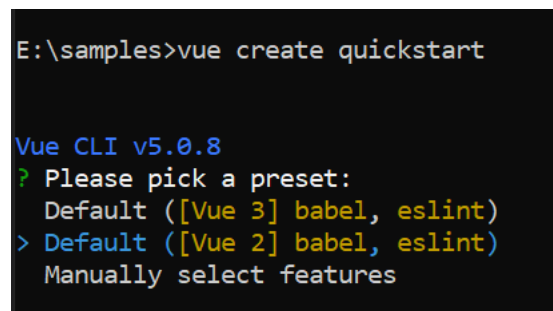

To generate a Vue 2 project using Vue-CLI, use the [vue create](#) command. Follow these steps to install Vue CLI and create a new project:

```
`bash
npm install -g @vue/cli
vue create quickstart
cd quickstart
npm run serve
`
```

or

```
`bash
yarn global add @vue/cli
vue create quickstart
cd quickstart
yarn run serve
`
```

When creating a new project, choose the option `Default ([Vue 2] babel, eslint)` from the menu.

```
E:\samples>vue create quickstart

Vue CLI v5.0.8
? Please pick a preset:
  Default ([Vue 3] babel, eslint)
> Default ([Vue 2] babel, eslint)
  Manually select features
```

Once the `quickstart` project is set up with default settings, proceed to add Syncfusion components to the project.

### Add Syncfusion Vue packages

Syncfusion packages are available at [npmjs.com](https://www.npmjs.com). To use Vue components, install the required npm package.

This article uses the `Vue 3D Charts component` as an example. Install the `@syncfusion/ej2-vue-charts` package by running the following command:

```
`bash
npm install @syncfusion/ej2-vue-charts --save
`

or
```

```
`bash
```

```
yarn add @syncfusion/ej2-vue-charts
```

```
,
```

The **--save** will instruct NPM to include the chart package inside of the **dependencies** section of the **package.json**.

### Add Syncfusion Vue component

Follow the below steps to add the Vue 3D Chart component:

1\ First, import and register the 3D Chart component in the **script** section of the **src/App.vue** file.

#### ~/SRC/APP.VUE

```
<script>
import { Chart3DComponent } from '@syncfusion/ej2-vue-charts';
export default {
  components: {
    'ejs-chart3d': Chart3DComponent
  }
}
</script>
```

2\ In the **template** section, define the 3D Chart component.

#### ~/SRC/APP.VUE

```
<template>
<div id="app">
  <ejs-chart3d id="container"> </ejs-chart3d>
</div>
</template>
```

Here is the summarized code for the above steps in the **src/App.vue** file:

#### ~/SRC/APP.VUE

```
<template>
  <div id="app">
    <ejs-chart3d id="container"> </ejs-chart3d>
  </div>
</template>
<script>
import { Chart3DComponent } from '@syncfusion/ej2-vue-charts';
export default {
  components: {
    'ejs-chart3d': Chart3DComponent
  },
  data () {
    return {
    }
  }
}
</script>
<style>
```

```
#container{  
  height: 350px;  
}  
</style>
```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run serve
```

```
,
```

```
or
```

```
`bash
```

```
yarn run serve
```

```
,
```

```
{% previewsample "page.domainurl/code-snippet/chart3d/getting-started/sample-cs1" %}
```

### Module injection

3D Chart component are segregated into individual feature-wise modules. In order to use a particular feature, you need to inject its feature service in the AppModule. In the current application, we are going to modify the above basic 3D Chart to visualize sales data for a particular year. For this application we are going to use column series, tooltip, data label, category axis and legend feature of the 3D Chart. Please find relevant feature service name and description as follows. *ColumnSeries3D - Inject this provider to use column series.* **Legend3D** - Inject this provider to use legend feature. *Tooltip3D - Inject this provider to use tooltip feature.* **DataLabel3D** - Inject this provider to use datalabel feature. \* **Category3D** - Inject this provider to use category feature.

These modules should be injected to the provide section as follows,

```
`javascript
```

```
import { Chart3DComponent, ColumnSeries3D } from "@syncfusion/ej2-vue-charts";
```

```
export default {
```

```
  components: {
```

```
    'ejs-chart3d': Chart3DComponent
```

```
  },
```

```
  provide: {
```

```
    chart3d: [ColumnSeries3D]
```

```
  }
```

```
};
```

```
</script>
```

```
,
```

### Populate 3D chart with data

This section explains how to plot below JSON data to the 3D Chart.

```
`javascript
export default {
  data() {
    return {
      seriesData: [
        { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
        { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
        { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
        { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
        { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
        { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
      ]
    };
  }
};
```

- Add a series object to the 3D Chart by using [series](#) property. Now map the field names `month` and `sales` in the JSON data to the [xName](#) and [yName](#) properties of the series, then set the JSON data to [dataSource](#) property.

Since the JSON contains category data, set the [valueType](#) for horizontal axis to `Category`. By default, the axis valueType is `Numeric`.

### ~/SRC/APP.VUE

```
<template>
  <div id="app">
    <ejs-chart3d id="container" :primaryXAxis='primaryXAxis'>
      <e-chart3d-series-collection>
        <e-chart3d-series :dataSource='seriesData' type='Column'
xName='month' yName='sales' name='Sales'> </e-chart3d-series>
      </e-chart3d-series-collection>
    </ejs-chart3d>
  </div>
</template>
<script>
import { Chart3DComponent, Chart3DSeriesCollectionDirective,
Chart3DSeriesDirective, ColumnSeries3D, Category3D } from "@syncfusion/ej2-
vue-charts";
export default {
  components: {
```

```

    'ejs-chart3d': Chart3DComponent,
    'e-chart3d-series-collection': Chart3DSeriesCollectionDirective,
    'e-chart3d-series': Chart3DSeriesDirective
  },
  data() {
    return {
      seriesData: [
        { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
        { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
        { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
        { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
        { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
        { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
      ],
      primaryXAxis: {
        valueType: 'Category'
      }
    };
  },
  provide: {
    chart3d: [ColumnSeries3D, Category3D]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart3d/getting-started/sample-cs2" %}

- The sales data are in thousands, so format the vertical axis label by adding \$ as a prefix and K as a suffix to each label. This can be achieved by setting the `labelFormat` property of axis. Here, `{value}` act as a placeholder for each axis label.

#### Add 3D chart title

You can add a title using `title` property to the 3D Chart to provide quick information to the user about the data plotted in the 3D Chart.

#### ~/SRC/APP.VUE

```

<template>
  <div id="app">
    <ejs-chart3d id="container" :title='title'
      :primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
      <e-chart3d-series-collection>
        <e-chart3d-series :dataSource='seriesData' type='Column'
          xName='month' yName='sales' name='Sales'> </e-chart3d-series>
      </e-chart3d-series-collection>
    </ejs-chart3d>
  </div>
</template>
<script>

```

```

import { Chart3DComponent, Chart3DSeriesCollectionDirective,
Chart3DSeriesDirective, ColumnSeries3D, Category3D } from "@syncfusion/ej2-
vue-charts";
export default {
  components: {
    'ejs-chart3d': Chart3DComponent,
    'e-chart3d-series-collection': Chart3DSeriesCollectionDirective,
    'e-chart3d-series': Chart3DSeriesDirective
  },
  data() {
    return {
      seriesData: [
        { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
        { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
        { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
        { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
        { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
        { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
      ],
      primaryXAxis: {
        valueType: 'Category'
      },
      primaryYAxis: {
        labelFormat: '${value}K'
      },
      title: "Sales Analysis"
    };
  },
  provide: {
    chart3d: [ColumnSeries3D, Category3D]
  }
};
</script>
<style>
  #container{
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart3d/getting-started/sample-cs3" %}

### Enable legend

You can use legend for the 3D Chart by setting the [visible](#) property to true in [legendSettings](#) object and by injecting the `Legend3D` into the `provide`.

### ~/SRC/APP.VUE

```

<template>
  <div id="app">
    <ejs-chart3d id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'
:legendSettings='legendSettings'>
      <e-chart3d-series-collection>
        <e-chart3d-series :dataSource='seriesData' type='Column'
xName='month' yName='sales' name='Sales'> </e-chart3d-series>
      </e-chart3d-series-collection>
    </div>

```

```

        </ejs-chart3d>
      </div>
    </template>
    <script>
    import { Chart3DComponent, Chart3DSeriesCollectionDirective,
    Chart3DSeriesDirective, ColumnSeries3D, Category3D, Legend3D } from
    "@syncfusion/ej2-vue-charts";
    export default {
      components: {
        'ejs-chart3d': Chart3DComponent,
        'e-chart3d-series-collection': Chart3DSeriesCollectionDirective,
        'e-chart3d-series': Chart3DSeriesDirective
      },
      data() {
        return {
          seriesData: [
            { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
            { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
            { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
            { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
            { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
            { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
          ],
          primaryXAxis: {
            valueType: 'Category'
          },
          primaryYAxis: {
            labelFormat: '${value}K'
          },
          legendSettings: {
            visible: true
          },
          title: "Sales Analysis"
        };
      },
      provide: {
        chart3d: [ColumnSeries3D, Category3D, Legend3D]
      }
    };
    </script>
    <style>
    #container {
      height: 350px;
    }
    </style>
  
```

{% previewsample "page.domainurl/code-snippet/chart3d/getting-started/sample-cs4" %}

#### Add data label

You can add data labels to improve the readability of the 3D Chart. This can be achieved by setting the [visible](#) property to true in the [dataLabel](#) object and by injecting `DataLabel3D` into the `provide`.

#### ~/SRC/APP.VUE

```

<template>
  <div id="app">
  
```

```

    <ejs-chart3d id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'
:legendSettings='legendSettings'>
      <e-chart3d-series-collection>
        <e-chart3d-series :dataSource='seriesData' type='Column'
xName='month' yName='sales' name='Sales' :dataLabel='dataLabel'> </e-
chart3d-series>
      </e-chart3d-series-collection>
    </ejs-chart3d>
  </div>
</template>
<script>
import { Chart3DComponent, Chart3DSeriesCollectionDirective,
Chart3DSeriesDirective, ColumnSeries3D, Category3D, Legend3D, DataLabel3D }
from "@syncfusion/ej2-vue-charts";
export default {
  components: {
    'ejs-chart3d': Chart3DComponent,
    'e-chart3d-series-collection': Chart3DSeriesCollectionDirective,
    'e-chart3d-series': Chart3DSeriesDirective
  },
  data() {
    return {
      seriesData: [
        { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
        { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
        { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
        { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
        { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
        { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
      ],
      primaryXAxis: {
        valueType: 'Category'
      },
      primaryYAxis:{
        labelFormat: '${value}K'
      },
      legendSettings: {
        visible: true
      },
      dataLabel:{
        visible: true
      },
      title: "Sales Analysis"
    };
  },
  provide: {
    chart3d: [ColumnSeries3D, Category3D, Legend3D, DataLabel3D]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

```
{% previewsample "page.domainurl/code-snippet/chart3d/getting-started/sample-cs5" %}
```

### Enable tooltip

The tooltip is useful when you cannot display information by using the data labels due to space constraints. You can enable tooltip by setting the [enable](#) property as true in [tooltip](#) object and by injecting `Tooltip3D` into the `provide`.

#### ~/SRC/APP.VUE

```
<template>
  <div id="app">
    <ejs-chart3d id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'
:tooltip='tooltip'>
      <e-chart3d-series-collection>
        <e-chart3d-series :dataSource='seriesData' type='Column'
xName='month' yName='sales' name='Sales' :dataLabel='dataLabel'> </e-
chart3d-series>
      </e-chart3d-series-collection>
    </ejs-chart3d>
  </div>
</template>
<script>
import { Chart3DComponent, Chart3DSeriesCollectionDirective,
Chart3DSeriesDirective, ColumnSeries3D, Category3D, DataLabel3D, Tooltip3D }
from "@syncfusion/ej2-vue-charts";
export default {
  components: {
    'ejs-chart3d': Chart3DComponent,
    'e-chart3d-series-collection': Chart3DSeriesCollectionDirective,
    'e-chart3d-series': Chart3DSeriesDirective
  },
  data() {
    return {
      seriesData: [
        { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
        { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
        { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
        { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
        { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
        { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
      ],
      primaryXAxis: {
        valueType: 'Category'
      },
      primaryYAxis:{
        labelFormat: '${value}K'
      },
      dataLabel:{
        visible: true
      },
      tooltip:{
        enable: true
      },
      title: "Sales Analysis"
    }
  }
}
```

```
    };  
  },  
  provide: {  
    chart3d: [ColumnSeries3D, Category3D, DataLabel3D, Tooltip3D]  
  }  
};  
</script>  
<style>  
  #container {  
    height: 350px;  
  }  
</style>
```

{% previewsample "page.domainurl/code-snippet/chart3d/getting-started/sample-cs6" %}

You can refer to our [Vue 3D Charts](#) feature tour page for its groundbreaking feature representations. You can also explore our [Vue 3D Charts example](#) that shows various 3D Chart types and how to represent time-dependent data, showing trends in data at equal intervals.

### Getting started with the Vue 3D chart component in Vue 3

This article provides a step-by-step guide for setting up a [Vite](#) project with a JavaScript environment and integrating the Syncfusion Vue 3D Chart component using the [Composition API](#) / [Options API](#).

The **Composition API** is a new feature introduced in Vue.js 3 that provides an alternative way to organize and reuse component logic. It allows developers to write components as functions that use smaller, reusable functions called composition functions to manage their properties and behavior.

The **Options API** is the traditional way of writing Vue.js components, where the component logic is organized into a series of options that define the component's properties and behavior. These options include data, methods, computed properties, watchers, lifecycle hooks, and more.

#### Prerequisites

##### [System requirements for Syncfusion Vue UI components](#)

##### Set up the Vite project

A recommended approach for beginning with Vue is to scaffold a project using [Vite](#). To create a new Vite project, use one of the commands that are specific to either NPM or Yarn.

```
`bash
```

```
npm create vite@latest
```

```
,
```

```
or
```

```
`bash
```

```
yarn create vite
```

```
,
```

Using one of the above commands will lead you to set up additional configurations for the project as below:

1. Define the project name: We can specify the name of the project directly. Let's specify the name of the project as **my-project** for this article.

```
`bash
```

```
? Project name: » my-project
```

```
,
```

2. Select **Vue** as the framework. It will create a Vue 3 project.

```
`bash
```

```
? Select a framework: » - Use arrow-keys. Return to submit.
```

```
Vanilla
```

```
Vue
```

```
React
```

```
Preact
```

```
Lit
```

```
Svelte
```

```
Others
```

```
,
```

3. Choose **JavaScript** as the framework variant to build this Vite project using JavaScript and Vue.

```
`bash
```

```
? Select a variant: » - Use arrow-keys. Return to submit.
```

```
JavaScript
```

```
TypeScript
```

```
Customize with create-vue ↗
```

```
Nuxt ↗
```

```
,
```

4. Upon completing the aforementioned steps to create the **my-project**, run the following command to install its dependencies:

```
`bash
```

```
cd my-project
```

```
npm install
```

```
,
```

```
or
```

```
`bash
```

```
cd my-project
```

```
yarn install
```

```
,
```

Now that `my-project` is ready to run with default settings, let's add Syncfusion components to the project.

#### Add Syncfusion Vue packages

Syncfusion Vue component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion Vue components in the project, install the corresponding npm package.

This article uses the `Vue 3D Chart component` as an example. To use the `Vue 3D Chart component` in the project, the `@syncfusion/ej2-vue-charts` package needs to be installed using the following command:

```
`bash
```

```
npm install @syncfusion/ej2-vue-charts --save
```

```
,
```

or

```
`bash
```

```
yarn add @syncfusion/ej2-vue-charts
```

```
,
```

#### Add Syncfusion Vue component

Follow the below steps to add the `Vue 3D Chart component` using `Composition API` or `Options API`:

1. First, import and register the `3D Chart component` and its child directives in the `script` section of the `src/App.vue` file. If you are using the `Composition API`, you should add the `setup` attribute to the `script` tag to indicate that Vue will be using the `Composition API`.

##### COMPOSITION API (~SRC/APP.VUE)

```
<script setup>
import { Chart3DComponent as EjsChart3d, Chart3DSeriesCollectionDirective as
EChart3dSeriesCollection, Chart3DSeriesDirective as EChart3dSeries,
ColumnSeries3D, Legend3D, Category3D } from "@syncfusion/ej2-vue-charts";
</script>
```

##### OPTIONS API (~SRC/APP.VUE)

```
<script>
import { Chart3DComponent, Chart3DSeriesCollectionDirective,
Chart3DSeriesDirective, ColumnSeries3D, Legend3D, Category3D } from
'@syncfusion/ej2-vue-charts';
//Component registration
export default {
  name: "App",
  components: {
    'ejs-chart3d' : Chart3DComponent,
    'e-chart3d-series-collection' : Chart3DSeriesCollectionDirective,
    'e-chart3d-series' : Chart3DSeriesDirective
  }
}
</script>
```

2. In the `template` section, define the 3D Chart component with the `dataSource` property.

#### ~/SRC/APP.VUE

```
<template>
<ejs-chart3d id="container" :title='title' :primaryXAxis='primaryXAxis'>
<e-chart3d-series-collection>
<e-chart3d-series :dataSource='seriesData' type='Column' xName='month'
yName='sales' name='Sales'>
</e-chart3d-series>
</e-chart3d-series-collection>
</ejs-chart3d>
</template>
```

3. Declare the values for the `dataSource` property in the `script` section.

#### COMPOSITION API (~/SRC/APP.VUE)

```
<script setup>
const seriesData = [
{ month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
{ month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
{ month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
{ month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
{ month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
{ month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
</script>
```

#### OPTIONS API (~/SRC/APP.VUE)

```
<script>
data() {
return {
seriesData: [
{ month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
{ month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
{ month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
{ month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
{ month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
{ month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
]
};
}
</script>
```

Here is the summarized code for the above steps in the `src/App.vue` file:

#### COMPOSITION API (~/SRC/APP.VUE)

```
<template>
<ejs-chart3d id="container" :title='title' :primaryXAxis='primaryXAxis'>
<e-chart3d-series-collection>
<e-chart3d-series :dataSource='seriesData' type='Column' xName='month'
yName='sales' name='Sales'>
</e-chart3d-series>
```

```

</e-chart3d-series-collection>
</ejs-chart3d>
</template>
<script setup>
import { provide } from 'vue';
import { Chart3DComponent as EjsChart3d, Chart3DSeriesCollectionDirective as EChart3dSeriesCollection, Chart3DSeriesDirective as EChart3dSeries, ColumnSeries3D, Category3D, Legend3D } from "@syncfusion/ej2-vue-charts";
const seriesData = [
  { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
  { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
  { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
  { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
  { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
  { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
const title = 'Sales Analysis';
const primaryXAxis = { valueType: 'Category' };
const chart3d = [ColumnSeries3D, Category3D, Legend3D];
provide('chart3d', chart3d);
</script>

```

### OPTIONS API (~SRC/APP.VUE)

```

<template>
<ejs-chart3d id="container" :title='title' :primaryXAxis='primaryXAxis'>
<e-chart3d-series-collection>
<e-chart3d-series :dataSource='seriesData' type='Column' xName='month'
yName='sales' name='Sales'>
</e-chart3d-series>
</e-chart3d-series-collection>
</ejs-chart3d>
</template>
<script>
import { Chart3DComponent, Chart3DSeriesCollectionDirective,
Chart3DSeriesDirective, ColumnSeries3D, Category3D, Legend3D } from
"@syncfusion/ej2-vue-charts";
export default {
name: "App",
components: {
'ejs-chart3d' : Chart3DComponent,
'e-chart3d-series-collection' : Chart3DSeriesCollectionDirective,
'e-chart3d-series' : Chart3DSeriesDirective
},
data() {
return {
primaryXAxis: {
valueType: 'Category'
},
title: 'Sales Analysis',
seriesData: [
{ month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
{ month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
{ month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
{ month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
{ month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },

```

```
{ month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }  
]  
};  
,  
provide: {  
  chart3d: [ ColumnSeries3D, Category3D, Legend3D ]  
},  
};  
</script>
```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run dev
```

```
`
```

or

```
`bash
```

```
yarn run dev
```

```
`
```

The output will appear as follows:

**Sample:** vue-3-3d-chart-getting-started.

For migrating from Vue 2 to Vue 3, refer to the [migration](#) documentation.

- [Getting Started with Vue UI Components using Options API and TypeScript](#)

## Chart

### Getting Started with the Vue Chart Component in Vue 2

This article provides a step-by-step guide for setting up a Vue 2 project using [Vue-CLI](#) and integrating the Syncfusion Vue Chart component.

#### Prerequisites

##### [System requirements for Syncfusion Vue UI components](#)

#### Dependencies

Below is the list of minimum dependencies required to use the chart component.

```
`javascript
|-- @syncfusion/ej2-vue-charts
|-- @syncfusion/ej2-base
|-- @syncfusion/ej2-data
|-- @syncfusion/ej2-pdf-export
|-- @syncfusion/ej2-file-utils
|-- @syncfusion/ej2-compression
|-- @syncfusion/ej2-charts
|-- @syncfusion/ej2-vue-base
|-- @syncfusion/ej2-svg-base
`,`
```

#### Setting up the Vue 2 project

To generate a Vue 2 project using Vue-CLI, use the [vue create](#) command. Follow these steps to install Vue CLI and create a new project:

```
`bash
npm install -g @vue/cli
vue create quickstart
cd quickstart
npm run serve
`,`
```

or

```
`bash
yarn global add @vue/cli
vue create quickstart
cd quickstart
```

```
yarn run serve
```

When creating a new project, choose the option `Default ([Vue 2] babel, eslint)` from the menu.

```
E:\samples>vue create quickstart

Vue CLI v5.0.8
? Please pick a preset:
  Default ([Vue 3] babel, eslint)
> Default ([Vue 2] babel, eslint)
  Manually select features
```

Once the `quickstart` project is set up with default settings, proceed to add Syncfusion components to the project.

#### Add Syncfusion Vue packages

Syncfusion packages are available at [npmjs.com](https://www.npmjs.com). To use Vue components, install the required npm package.

This article uses the [Vue Charts component](#) as an example. Install the `@syncfusion/ej2-vue-charts` package by running the following command:

```
`bash
```

```
npm install @syncfusion/ej2-vue-charts --save
```

or

```
`bash
```

```
yarn add @syncfusion/ej2-vue-charts
```

The `--save` will instruct NPM to include the chart package inside of the `dependencies` section of the `package.json`.

#### Add Syncfusion Vue component

Follow the below steps to add the Vue Chart component:

1\. First, import and register the Chart component in the `script` section of the `src/App.vue` file.

##### ~/SRC/APP.VUE

```
<script>
import { ChartComponent } from '@syncfusion/ej2-vue-charts';
export default {
  components: {
    'ejs-chart': ChartComponent
  }
}
</script>
```

2\ In the `template` section, define the Chart component.

**~/SRC/APP.VUE**

```
<template>
<div id="app">
<ejs-chart id="container"> </ejs-chart>
</div>
</template>
```

Here is the summarized code for the above steps in the **src/App.vue** file:

**~/SRC/APP.VUE**

```
<template>
  <div id="app">
    <ejs-chart id="container"> </ejs-chart>
  </div>
</template>
<script>
import { ChartComponent } from '@syncfusion/ej2-vue-charts';
export default {
  components: {
    'ejs-chart': ChartComponent
  },
  data () {
    return {
    }
  }
}
</script>
<style>
#container{
  height: 350px;
}
</style>
```

[Run the project](#)

To run the project, use the following command:

```
`bash
```

```
npm run serve
```

```
,
```

or

```
`bash
```

```
yarn run serve
```

```
,
```

```
{% previewsample "page.domainurl/code-snippet/chart/getting-started/initialize-cs1" %}
```

### Module Injection

Chart component are segregated into individual feature-wise modules. In order to use a particular feature,

you need to inject its feature service in the AppModule. In the current application, we are going to modify the above basic chart to visualize sales data for a particular year.

For this application we are going to use line series, tooltip, data label, category axis and legend feature of the chart. Please find relevant feature service name and description as follows.

- **LineSeries** - Inject this provider to use line series.
- **Legend** - Inject this provider to use legend feature.
- **Tooltip** - Inject this provider to use tooltip feature.
- **DataLabel** - Inject this provider to use datalabel feature.
- **Category** - Inject this provider to use category feature.

These modules should be injected to the provide section as follows,

```
`javascript
import { ChartComponent, LineSeries } from "@syncfusion/ej2-vue-charts";
export default {
  components: {
    'ejs-chart': ChartComponent
  },
  provide: {
    chart: [LineSeries]
  }
};
</script>
`
```

### Populate Chart with Data

This section explains how to plot below JSON data to the chart.

```
`javascript
export default {
  data() {
    return {
      seriesData: [
        { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
```

```

{ month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
{ month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
{ month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
{ month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
{ month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
]
};
}
};
`

```

- Add a series object to the chart by using [series](#) property. Now map the field names `month` and `sales` in the JSON data to the [xName](#) and

[yName](#) properties of the series, then set the JSON data to [dataSource](#) property.

Since the JSON contains category data, set the [valueType](#) for horizontal axis to `Category`. By default, the axis `valueType` is `Numeric`.

#### ~/SRC/APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='month'
yName='sales' name='Sales'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import { ChartComponent, SeriesCollectionDirective, SeriesDirective,
LineSeries, Category } from "@syncfusion/ej2-vue-charts";
export default {
  components: {
    'ejs-chart': ChartComponent,
    'e-series-collection': SeriesCollectionDirective,
    'e-series': SeriesDirective
  },
  data() {
    return {
      seriesData: [
        { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
        { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
        { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
        { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
        { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
        { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
      ]
    }
  }
}

```

```

        ],
        primaryXAxis: {
          valueType: 'Category'
        }
      };
    },
    provide: {
      chart: [LineSeries, Category]
    }
  };
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/getting-started/datasource-cs4" %}

- The sales data are in thousands, so format the vertical axis label by adding \$ as a prefix and K as a suffix to each label. This can be achieved by setting the `labelFormat` property of axis. Here, `{value}` act as a placeholder for each axis label.

### Add Chart Title

You can add a title using `title` property to the chart to provide quick information to the user about the data plotted in the chart.

### ~/SRC/APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='month'
yName='sales' name='Sales'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import { ChartComponent, SeriesDirective, SeriesCollectionDirective,
LineSeries, Category } from "@syncfusion/ej2-vue-charts";
export default {
  components: {
    'ejs-chart': ChartComponent,
    'e-series-collection': SeriesCollectionDirective,
    'e-series': SeriesDirective
  },
  data() {
    return {
      seriesData: [
        { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
        { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
        { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },

```

```

        { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
        { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
        { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
      ],
      primaryXAxis: {
        valueType: 'Category'
      },
      primaryYAxis: {
        labelFormat: '${value}K'
      },
      title: "Sales Analysis"
    };
  },
  provide: {
    chart: [LineSeries, Category]
  }
};
</script>
<style>
  #container{
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/getting-started/tooltip-cs1" %}

### Enable Legend

You can use legend for the chart by setting the `visible` property to true in [legendSettings](#) object and by injecting the `Legend` into the `provide`.

### ~/SRC/APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
    :primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'
    :legendSettings='legendSettings'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='month'
        yName='sales' name='Sales'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import { ChartComponent, SeriesDirective, SeriesCollectionDirective,
LineSeries, Category, Legend } from "@syncfusion/ej2-vue-charts";
export default {
  components: {
    'ejs-chart': ChartComponent,
    'e-series-collection': SeriesCollectionDirective,
    'e-series': SeriesDirective
  },
  data() {
    return {
      seriesData: [

```

```

        { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
        { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
        { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
        { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
        { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
        { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
      ],
      primaryXAxis: {
        valueType: 'Category'
      },
      primaryYAxis: {
        labelFormat: '${value}K'
      },
      legendSettings: {
        visible: true
      },
      title: "Sales Analysis"
    };
  },
  provide: {
    chart: [LineSeries, Category, Legend]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/getting-started/legend-cs1" %}

### Add Data Label

You can add data labels to improve the readability of the chart. This can be achieved by setting the visible property to true in the `dataLabel` object and by injecting `DataLabel` into the `provide`.

### ~/SRC/APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
    :primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'
    :legendSettings='legendSettings'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='month'
        yName='sales' name='Sales' :marker='marker'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import { ChartComponent, SeriesDirective, SeriesCollectionDirective,
LineSeries, Category, DataLabel, Legend } from "@syncfusion/ej2-vue-charts";
export default {
  components: {
    'ejs-chart': ChartComponent,

```

```

    'e-series-collection': SeriesCollectionDirective,
    'e-series': SeriesDirective
  },
  data() {
    return {
      seriesData: [
        { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
        { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
        { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
        { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
        { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
        { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
      ],
      primaryXAxis: {
        valueType: 'Category'
      },
      primaryYAxis: {
        labelFormat: '${value}K'
      },
      legendSettings: {
        visible: true
      },
      marker: {
        dataLabel: {
          visible: true
        }
      },
      title: "Sales Analysis"
    };
  },
  provide: {
    chart: [LineSeries, Category, DataLabel, Legend]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/getting-started/datalabel-cs1" %}

### Enable Tooltip

The tooltip is useful when you cannot display information by using the data labels due to space constraints. You can enable tooltip by setting the enable property as true in [tooltip](#) object and by injecting **Tooltip** into the **provide**.

### ~/SRC/APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
      :primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'
      :tooltip='tooltip'>
      <e-series-collection>

```

```

        <e-series :dataSource='seriesData' type='Line' xName='month'
yName='sales' name='Sales' :marker='marker'> </e-series>
    </e-series-collection>
</ejs-chart>
</div>
</template>
<script>
import { ChartComponent, SeriesDirective, SeriesCollectionDirective,
LineSeries, Category, DataLabel, Tooltip } from "@syncfusion/ej2-vue-
charts";
export default {
  components: {
    'ejs-chart': ChartComponent,
    'e-series-collection': SeriesCollectionDirective,
    'e-series': SeriesDirective
  },
  data() {
    return {
      seriesData: [
        { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
        { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
        { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
        { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
        { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
        { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
      ],
      primaryXAxis: {
        valueType: 'Category'
      },
      primaryYAxis:{
        labelFormat: '${value}K'
      },
      marker: {
        dataLabel:{
          visible: true
        }
      },
      tooltip:{ enable: true },
      title: "Sales Analysis"
    };
  },
  provide: {
    chart: [LineSeries, Category, DataLabel, Tooltip]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/getting-started/tooltip-cs2" %}

You can refer to our [Vue Charts](#) feature tour page for its groundbreaking feature representations. You can also explore our [Vue Charts example](#) that shows various chart types and how to represent time-dependent data, showing trends in data at equal intervals.

### Getting Started with the Vue Chart Component in Vue 3

This article provides a step-by-step guide for setting up a [Vite](#) project with a JavaScript environment and integrating the Syncfusion Vue Chart component using the [Composition API](#) / [Options API](#).

The **Composition API** is a new feature introduced in Vue.js 3 that provides an alternative way to organize and reuse component logic. It allows developers to write components as functions that use smaller, reusable functions called composition functions to manage their properties and behavior.

The **Options API** is the traditional way of writing Vue.js components, where the component logic is organized into a series of options that define the component's properties and behavior. These options include data, methods, computed properties, watchers, lifecycle hooks, and more.

#### Prerequisites

##### [System requirements for Syncfusion Vue UI components](#)

#### Set up the Vite project

A recommended approach for beginning with Vue is to scaffold a project using [Vite](#). To create a new Vite project, use one of the commands that are specific to either NPM or Yarn.

```
`bash
```

```
npm create vite@latest
```

```
,
```

or

```
`bash
```

```
yarn create vite
```

```
,
```

Using one of the above commands will lead you to set up additional configurations for the project as below:

1. Define the project name: We can specify the name of the project directly. Let's specify the name of the project as **my-project** for this article.

```
`bash
```

```
? Project name: » my-project
```

```
,
```

2. Select **Vue** as the framework. It will create a Vue 3 project.

```
`bash
```

```
? Select a framework: » - Use arrow-keys. Return to submit.
```

```
Vanilla
```

```
Vue
```

```
React
```

Preact

Lit

Svelte

Others

,

3. Choose **JavaScript** as the framework variant to build this Vite project using JavaScript and Vue.

```
`bash
```

? Select a variant: » - Use arrow-keys. Return to submit.

JavaScript

TypeScript

Customize with create-vue ↗

Nuxt ↗

,

4. Upon completing the aforementioned steps to create the **my-project**, run the following command to install its dependencies:

```
`bash
```

```
cd my-project
```

```
npm install
```

,

or

```
`bash
```

```
cd my-project
```

```
yarn install
```

,

Now that **my-project** is ready to run with default settings, let's add Syncfusion components to the project.

#### Add Syncfusion Vue packages

Syncfusion Vue component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion Vue components in the project, install the corresponding npm package.

This article uses the [Vue Chart component](#) as an example. To use the Vue Chart component in the project, the **@syncfusion/ej2-vue-charts** package needs to be installed using the following command:

```
`bash
```

```
npm install @syncfusion/ej2-vue-charts --save
```

,

or

```
`bash
```

```
yarn add @syncfusion/ej2-vue-charts
```

```
,
```

### Add Syncfusion Vue component

Follow the below steps to add the Vue Chart component using **Composition API** or **Options API**:

1.First, import and register the Chart component and its child directives in the **script** section of the **src/App.vue** file. If you are using the **Composition API**, you should add the **setup** attribute to the **script** tag to indicate that Vue will be using the **Composition API**.

#### **COMPOSITION API (~SRC/APP.VUE)**

```
<script setup>
import { ChartComponent as EjsChart, SeriesCollectionDirective as
ESeriesCollection, SeriesDirective as ESeries, LineSeries, Legend, Category
} from "@syncfusion/ej2-vue-charts";
</script>
```

#### **OPTIONS API (~SRC/APP.VUE)**

```
<script>
import { ChartComponent, SeriesCollectionDirective, SeriesDirective,
LineSeries, Legend, Category } from '@syncfusion/ej2-vue-charts';
//Component registration
export default {
  name: "App",
  components: {
    'ejs-chart' : ChartComponent,
    'e-series-collection' : SeriesCollectionDirective,
    'e-series' : SeriesDirective
  }
}
</script>
```

2.In the **template** section, define the Chart component with the [dataSource](#) property.

#### **~/SRC/APP.VUE**

```
<template>
<ejs-chart id="container" :title='title' :primaryXAxis='primaryXAxis'>
<e-series-collection>
<e-series :dataSource='seriesData' type='Line' xName='month' yName='sales'
name='Sales'> </e-series>
</e-series-collection>
</ejs-chart>
</template>
```

3.Declare the values for the **dataSource** property in the **script** section.

#### **COMPOSITION API (~SRC/APP.VUE)**

```
<script setup>
const seriesData = [
  { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
  { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
  { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
  { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
  { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
  { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
</script>
```

### OPTIONS API (~SRC/APP.VUE)

```
<script>
data() {
  return {
    seriesData: [
      { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
      { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
      { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
      { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
      { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
      { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
    ]
  };
}
</script>
```

Here is the summarized code for the above steps in the **src/App.vue** file:

### COMPOSITION API (~SRC/APP.VUE)

```
<template>
<ejs-chart id="container" :title='title' :primaryXAxis='primaryXAxis'>
  <e-series-collection>
    <e-series :dataSource='seriesData' type='Line' xName='month' yName='sales'
    name='Sales'> </e-series>
  </e-series-collection>
</ejs-chart>
</template>
<script setup>
import { provide } from 'vue';
import { ChartComponent as EjsChart, SeriesCollectionDirective as
ESeriesCollection, SeriesDirective as ESeries, LineSeries, Legend, Category
} from "@syncfusion/ej2-vue-charts";
const seriesData = [
  { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
  { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
  { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
  { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
  { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
  { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
const title = 'Sales Analysis';
const primaryXAxis = {valueType: 'Category'};
const chart = [LineSeries, Legend, Category];
```

```
provide('chart', chart);  
</script>
```

### OPTIONS API (~SRC/APP.VUE)

```
<template>  
<ejs-chart id="container" :title='title' :primaryXAxis='primaryXAxis'>  
<e-series-collection>  
<e-series :dataSource='seriesData' type='Line' xName='month' yName='sales'  
name='Sales'> </e-series>  
</e-series-collection>  
</ejs-chart>  
</template>  
<script>  
import { ChartComponent, SeriesCollectionDirective, SeriesDirective,  
LineSeries, Legend, Category } from "@syncfusion/ej2-vue-charts";  
export default {  
  name: "App",  
  components: {  
    'ejs-chart' : ChartComponent,  
    'e-series-collection' : SeriesCollectionDirective,  
    'e-series' : SeriesDirective  
  },  
  data() {  
    return {  
      primaryXAxis: {  
        valueType: 'Category'  
      },  
      title: 'Sales Analysis',  
      seriesData: [  
        { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },  
        { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },  
        { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },  
        { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },  
        { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },  
        { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }  
      ]  
    };  
  },  
  provide: {  
    chart: [ LineSeries, Legend, Category ]  
  },  
};  
</script>
```

### Run the project

To run the project, use the following command:

```
`bash
```

```
npm run dev
```

```
`
```

or

```
`bash
```

```
yarn run dev
```

```
,
```

The output will appear as follows:

**Sample:** [vue-3-chart-getting-started](#).

For migrating from Vue 2 to Vue 3, refer to the [migration](#) documentation.

## Working with data in Vue Chart component

Chart can visualise data bound from local or remote data.

### Local Data

You can bind a simple JSON data to the chart using [dataSource](#) property in series. Now map the fields in JSON to [xName](#) and [yName](#) properties.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
xName='month' yName='sales' name='Sales'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
```

```

seriesData: [
  { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
  { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
  { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
  { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
  { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
  { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
],
primaryXAxis: {
  valueType: 'Category'
},
title: "Olympic Medals"
};
},
provide: {
  chart: [ColumnSeries, Category]
}
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/column-cs19" %}

### Common Datasource

You can also bind a JSON data common to all series using [dataSource](#) property in chart.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :dataSource='seriesData'>
      <e-series-collection>
        <e-series type='Column' xName='month' yName='sales' > </e-
series>
        <e-series type='Column' xName='month' yName='sales1' > </e-
series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { month: 'Jan', sales: 35, sales1: 28 }, { month: 'Feb', sales: 28,
sales1: 35 },

```

```

    { month: 'Mar', sales: 34, sales1: 32 }, { month: 'Apr', sales: 32,
    sales1: 34 },
    { month: 'May', sales: 40, sales1: 32 }, { month: 'Jun', sales: 32,
    sales1: 40 },
    { month: 'Jul', sales: 35, sales1: 55 }, { month: 'Aug', sales: 55,
    sales1: 35 },
    { month: 'Sep', sales: 38, sales1: 30 }, { month: 'Oct', sales: 30,
    sales1: 38 },
    { month: 'Nov', sales: 25, sales1: 32 }, { month: 'Dec', sales: 32,
    sales1: 25 }
    ],
    primaryXAxis: {
      valueType: 'Category'
    },
    title: "Olympic Medals"
  };
},
provide: {
  chart: [ColumnSeries, Category]
}
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/column-cs21" %}

### Remote Data

You can also bind remote data to the chart using **DataManager**. The DataManager requires minimal information

like webservice URL, adaptor and crossDomain to interact with service endpoint properly. Assign the instance

of DataManager to the [dataSource](#) property in series and map the fields of data to [xName](#) and [yName](#) properties. You can also use the [query](#) property of the series to filter the data.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :primaryXAxis='primaryXAxis'
    :primaryYAxis='primaryYAxis' :title='title'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
        xName='CustomerID' yName='Freight' :query='queries'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";

```

```

import { ChartPlugin, ColumnSeries, Category } from "@syncfusion/ej2-vue-charts";
import { DataManager, Query } from '@syncfusion/ej2-data';
Vue.use(ChartPlugin);
let dataManager = new DataManager({
  url: 'https://services.syncfusion.com/vue/production/api/orders'
});
let query = new Query().take(5).where('Estimate', 'lessThan', 3, false);
export default {
  data() {
    return {
      seriesData: dataManager,
      queries: query,
      primaryXAxis: {
        valueType: 'Category',
      },
      primaryYAxis: {
        title: 'Freight rate in U.S. dollars'
      },
      title: 'Container freight rate'
    };
  },
  provide: {
    chart: [ColumnSeries, Category]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/column-cs22" %}

### Empty points

The Data points that uses the `null` or `undefined` as value are considered as empty points. Empty data points are ignored and not plotted in the Chart. When the data is provided by using the points property, By using `emptyPointSettings` property in series, you can customize the empty point. Default `mode` of the empty point is `Gap`.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
    :primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
        xName='month' yName='sales' name='Sales'
        :emptyPointSettings='emptyPointSettings1'></e-series>
        <e-series :dataSource='seriesData' type='Line' xName='month'
        yName='sales' name='Sales Compare'
        :emptyPointSettings='emptyPointSettings2'></e-series>
      </e-series-collection>
    </div>
  </template>

```

```

        </ejs-chart>
      </div>
    </template>
    <script>
    import Vue from "vue";
    import { ChartPlugin, ColumnSeries, LineSeries, Category } from
"@syncfusion/ej2-vue-charts";
    Vue.use(ChartPlugin);
    export default {
      data() {
        return {
          seriesData: [
            { month: 'Jan', sales: 35 }, { month: 'Feb', sales: null },
            { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
            { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
            { month: 'Jul', sales: undefined }, { month: 'Aug', sales: 55 },
            { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
            { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
          ],
          primaryXAxis: {
            valueType: 'Category'
          },
          emptyPointSettings1: {
            mode: "Average",
            fill: 'grey'
          },
          emptyPointSettings2: {
            mode: "Gap"
          },
          title: "Olympic Medals"
        };
      },
      provide: {
        chart: [ColumnSeries, LineSeries, Category]
      }
    };
    </script>
    <style>
    #container {
      height: 350px;
    }
    </style>
  
```

{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs43" %}

- Customizing empty point

Specific color for empty point can be set by **fill** property in **emptyPointSettings**. Border for a empty point can be set by **border** property.

#### APP.VUE

```

<template>
  <div id="app">

```

```

        <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
            <e-series-collection>
                <e-series :dataSource='seriesData' type='Column'
xName='month' yName='sales' name='Sales'
:emptyPointSettings='emptyPointSettings'></e-series>
            </e-series-collection>
        </ejs-chart>
    </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, LineSeries, Category } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
    data() {
        return {
            seriesData: [
                { month: 'Jan', sales: 35 }, { month: 'Feb', sales: null },
                { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
                { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
                { month: 'Jul', sales: undefined }, { month: 'Aug', sales: 55 },
                { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
                { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
            ],
            primaryXAxis: {
                valueType: 'Category'
            },
            emptyPointSettings: {
                mode: "Average",
                fill: 'red',
                border: { width: 2, color: 'violet' }
            },
            title: "Olympic Medals"
        };
    },
    provide: {
        chart: [ColumnSeries, LineSeries, Category]
    }
};
</script>
<style>
    #container {
        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs44" %}

## Chart dimensions in Vue Chart component

### Size for Container

Chart can render to its container size. You can set the size via inline or CSS as demonstrated below.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" width='650px' height='350px'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='month'
yName='sales' name='Sales'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
        { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
        { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
        { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
        { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
        { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
      ],
      primaryXAxis: {
        valueType: 'Category'
      }
    };
  },
  provide: {
    chart: [LineSeries, Category]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/getting-started/datasource-cs1" %}

### Size for Chart

You can also set size for chart directly through [width](#) and [height](#) properties.

<!-- markdownlint-disable MD036 -->

- In Pixel

<!-- markdownlint-disable MD036 -->

You can set the size of chart in pixel as demonstrated below.

**APP.VUE**

```

<template>
  <div id="app">
    <ejs-chart id="container" width='650px' height='350px'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='month'
yName='sales' name='Sales'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
        { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
        { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
        { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
        { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
        { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
      ],
      primaryXAxis: {
        valueType: 'Category'
      }
    };
  },
  provide: {
    chart: [LineSeries, Category]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/getting-started/datasource-cs2" %}

- In Percentage

By setting value in percentage, chart gets its dimension with respect to its container. For example, when the height is '50%', chart renders to half of the container height.

**APP.VUE**

```

<template>
  <div id="app">

```

```

        <ejs-chart id="container" :primaryXAxis='primaryXAxis' width='80%'
height='90%'>
            <e-series-collection>
                <e-series :dataSource='seriesData' type='Line' xName='month'
yName='sales' name='Sales'> </e-series>
            </e-series-collection>
        </ejs-chart>
    </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
    data() {
        return {
            seriesData: [
                { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
                { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
                { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
                { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
                { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
                { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
            ],
            primaryXAxis: {
                valueType: 'Category'
            }
        };
    },
    provide: {
        chart: [LineSeries, Category]
    }
};
</script>
<style>
    #container {
        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/getting-started/datasource-cs3" %}

Note: When you do not specify the size, it takes 450px as the height and window size as its width.

### Category axis in Vue Chart component

<!-- markdownlint-disable MD036 -->

Category axis are used to represent, the string values instead of numbers.

#### APP.VUE

```

<template>
    <div id="app">
        <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
            <e-series-collection>

```

```

        <e-series :dataSource='seriesData' type='Column'
        xName='country' yName='gold' name='Gold'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50 },
        { country: "China", gold: 40 },
        { country: "Japan", gold: 70 },
        { country: "Australia", gold: 60 },
        { country: "France", gold: 50 },
        { country: "Germany", gold: 40 },
        { country: "Italy", gold: 40 },
        { country: "Sweden", gold: 30 }
      ],
      primaryXAxis: {
        valueType: 'Category',
        title: 'Countries'
      },
      primaryYAxis:
      {
        minimum: 0, maximum: 80,
        interval: 20, title: 'Medals'
      },
      title: "Olympic Medals"
    };
  },
  provide: {
    chart: [ColumnSeries, Category]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs20" %}

Note: To use category axis, we need to inject **Category** into the **provide** and set the [valueType](#) of axis to **Category**.

<!-- markdownlint-disable MD036 -->

[Labels Placement](#)

<!-- markdownlint-disable MD036 -->

By default, category labels are placed between the ticks in an axis, this can also be placed on ticks using [labelPlacement](#) property.

#### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='gold' name='Gold'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50 },
        { country: "China", gold: 40 },
        { country: "Japan", gold: 70 },
        { country: "Australia", gold: 60 },
        { country: "France", gold: 50 },
        { country: "Germany", gold: 40 },
        { country: "Italy", gold: 40 },
        { country: "Sweden", gold: 30 }
      ],
      primaryXAxis: {
        valueType: 'Category',
        title: 'Countries',
        labelPlacement: 'OnTicks'
      },
      title: "Olympic Medals"
    };
  },
  provide: {
    chart: [ColumnSeries, Category]
  },
};
</script>
<style>
#container {
  height: 350px;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs21" %}

## Range

Range of the category axis can be customized using `minimum`, `maximum` and `interval` property of the axis.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='gold' name='Gold'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50 },
        { country: "China", gold: 40 },
        { country: "Japan", gold: 70 },
        { country: "Australia", gold: 60 },
        { country: "France", gold: 50 },
        { country: "Germany", gold: 40 },
        { country: "Italy", gold: 40 },
        { country: "Sweden", gold: 30 }
      ],
      primaryXAxis: {
        valueType: 'Category',
        title: 'Countries',
        minimum: 1,
        maximum: 5,
        interval: 2
      },
      title: "Olympic Medals"
    };
  },
  provide: {
    chart: [ColumnSeries, Category]
  },
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>
```

{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs22" %}

### Indexed category axis

Category axis also can be rendered based on the index values of data source. This can be achieved by defining the `isIndexed` property to `true` in the axis.

#### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData1' type='Column' xName='x'
yName='y'> </e-series>
        <e-series :dataSource='seriesData2' type='Column' xName='x'
yName='y'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData1: [
        { x: 'Myanmar', y: 7.3 }, { x: 'India', y: 7.9 }, { x: 'Bangladesh',
y: 6.8 },
        { x: 'Cambodia', y: 7.0 }, { x: 'China', y: 6.9 }
      ],
      seriesData2: [
        { x: 'Poland', y: 2.7 }, { x: 'Australia', y: 2.5 }, { x: 'Singapore',
y: 2.0 },
        { x: 'Canada', y: 1.4 }, { x: 'Germany', y: 1.8 }
      ],
      primaryXAxis: {
        valueType: 'Category',
        isIndexed: true
      },
      title: "Olympic Medals"
    };
  },
  provide: {
    chart: [ColumnSeries, Category]
  },
};
</script>
<style>
#container {
  height: 350px;
}
</style>
```

```
{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs23" %}
```

```
<!-- markdownlint-disable MD036 -->
```

## Numeric axis in Vue Chart component

You can use numeric axis to represent numeric values of data in chart. By default, the `valueType` of an axis is `Double`.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Area' xName='x'
yName='y' name='England'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, AreaSeries } from "@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[
        { x: 1, y: 7 }, { x: 2, y: 1 }, { x: 3, y: 1 }, { x: 4, y: 14 }, { x: 5,
y: 1 }, { x: 6, y: 10 },
        { x: 7, y: 8 }, { x: 8, y: 6 }, { x: 9, y: 10 }, { x: 10, y: 10 }, { x:
11, y: 16 }, { x: 12, y: 6 },
        { x: 13, y: 14 }, { x: 14, y: 7 }, { x: 15, y: 5 }, { x: 16, y: 2 }, {
x: 17, y: 14 }, { x: 18, y: 7 },
        { x: 19, y: 7 }, { x: 20, y: 10 }],
      title: "England - Run Rate"
    };
  },
  provide: {
    chart: [AreaSeries]
  },
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>
```

```
{% previewsample "page.domainurl/code-snippet/chart/axis/double-cs1" %}
```

## Range

Range for an axis, will be calculated automatically based on the provided data, you can also customize the range of the axis using [minimum](#), [maximum](#) and [interval](#) property of the axis.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Area' xName='x'
yName='y' name='England'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, AreaSeries } from "@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[
        { x: 1, y: 7 }, { x: 2, y: 1 }, { x: 3, y: 1 }, { x: 4, y: 14 }, { x: 5,
y: 1 }, { x: 6, y: 10 },
        { x: 7, y: 8 }, { x: 8, y: 6 }, { x: 9, y: 10 }, { x: 10, y: 10 }, { x:
11, y: 16 }, { x: 12, y: 6 },
        { x: 13, y: 14 }, { x: 14, y: 7 }, { x: 15, y: 5 }, { x: 16, y: 2 }, {
x: 17, y: 14 }, { x: 18, y: 7 },
        { x: 19, y: 7 }, { x: 20, y: 10 }],
      primaryXAxis: {
        valueType: 'Double',
        minimum: 1,
        maximum: 20,
        interval: 5,
        title: 'Overs'
      },
      title: "England - Run Rate"
    };
  },
  provide: {
    chart: [AreaSeries]
  },
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/double-cs2" %}

### Range Padding

Padding can be applied to the minimum and maximum extremes of the axis range by using the [rangePadding](#) property. Numeric axis supports following types of padding.

- Round
- Normal

- Auto

### Numeric - None

When the [rangePadding](#) is set to **None**, minimum and maximum of an axis is based on the data.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Area' xName='x'
yName='y' name='England'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, AreaSeries } from "@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[
        { x: 1, y: 7 }, { x: 2, y: 1 }, { x: 3, y: 1 }, { x: 4, y: 14 }, { x: 5,
y: 1 }, { x: 6, y: 10 },
        { x: 7, y: 8 }, { x: 8, y: 6 }, { x: 9, y: 10 }, { x: 10, y: 10 }, { x:
11, y: 16 }, { x: 12, y: 6 },
        { x: 13, y: 14 }, { x: 14, y: 7 }, { x: 15, y: 5 }, { x: 16, y: 2 }, {
x: 17, y: 14 }, { x: 18, y: 7 },
        { x: 19, y: 7 }, { x: 20, y: 10 } ],
      primaryXAxis: {
        valueType: 'Double',
        title: 'Overs'
      },
      primaryYAxis: {
        title: 'Runs',
        valueType: 'Double',
        rangePadding: 'None'
      },
      title: "England - Run Rate"
    };
  },
  provide: {
    chart: [AreaSeries]
  },
};
</script>
<style>
#container {
  height: 350px;
}
</style>
```

```
{% previewsample "page.domainurl/code-snippet/chart/axis/double-cs3" %}
```

### Numeric - Round

When the [rangePadding](#) is set to **Round**, minimum and maximum will be

rounded to the nearest possible value divisible by interval. For example, when the minimum is 3.5 and the interval is 1, then the minimum will be rounded to 3.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Area' xName='x'
yName='y' name='England'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, AreaSeries } from "@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[
        { x: 1, y: 7 }, { x: 2, y: 1 }, { x: 3, y: 1 }, { x: 4, y: 14 }, { x: 5,
y: 1 }, { x: 6, y: 10 },
        { x: 7, y: 8 }, { x: 8, y: 6 }, { x: 9, y: 10 }, { x: 10, y: 10 }, { x:
11, y: 16 }, { x: 12, y: 6 },
        { x: 13, y: 14 }, { x: 14, y: 7 }, { x: 15, y: 5 }, { x: 16, y: 2 }, {
x: 17, y: 14 }, { x: 18, y: 7 },
        { x: 19, y: 7 }, { x: 20, y: 10 }],
      primaryXAxis: {
        valueType: 'Double',
        title: 'Overs'
      },
      primaryYAxis: {
        title: 'Runs',
        valueType: 'Double',
        rangePadding: 'Round'
      },
      title: "England - Run Rate"
    };
  },
  provide: {
    chart: [AreaSeries]
  },
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>
```

```
</style>
```

```
{% previewsample "page.domainurl/code-snippet/chart/axis/double-cs4" %}
```

### Numeric - Additional

When the [rangePadding](#) is set to **Additional**, interval of an axis will be padded to the minimum and maximum of the axis.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Area' xName='x'
yName='y' name='England'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, AreaSeries } from "@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[
        { x: 1, y: 7 }, { x: 2, y: 1 }, { x: 3, y: 1 }, { x: 4, y: 14 }, { x: 5,
y: 1 }, { x: 6, y: 10 },
        { x: 7, y: 8 }, { x: 8, y: 6 }, { x: 9, y: 10 }, { x: 10, y: 10 }, { x:
11, y: 16 }, { x: 12, y: 6 },
        { x: 13, y: 14 }, { x: 14, y: 7 }, { x: 15, y: 5 }, { x: 16, y: 2 }, {
x: 17, y: 14 }, { x: 18, y: 7 },
        { x: 19, y: 7 }, { x: 20, y: 10 }],
      primaryXAxis: {
        valueType: 'Double',
        title: 'Overs'
      },
      primaryYAxis: {
        title: 'Runs',
        valueType: 'Double',
        rangePadding: 'Additional'
      },
      title: "England - Run Rate"
    };
  },
  provide: {
    chart: [AreaSeries]
  },
};
</script>
<style>
#container {
```

```

    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/double-cs5" %}

### Numeric - Normal

When the [rangePadding](#) is set to **Normal**, padding is applied to the axis based on default range calculation.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Area' xName='x'
yName='y' name='England'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, AreaSeries } from "@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[
        { x: 1, y: 7 }, { x: 2, y: 1 }, { x: 3, y: 1 }, { x: 4, y: 14 }, { x: 5,
y: 1 }, { x: 6, y: 10 },
        { x: 7, y: 8 }, { x: 8, y: 6 }, { x: 9, y: 10 }, { x: 10, y: 10 }, { x:
11, y: 16 }, { x: 12, y: 6 },
        { x: 13, y: 14 }, { x: 14, y: 7 }, { x: 15, y: 5 }, { x: 16, y: 2 }, {
x: 17, y: 14 }, { x: 18, y: 7 },
        { x: 19, y: 7 }, { x: 20, y: 10 }],
      primaryXAxis: {
        valueType: 'Double',
        title: 'Overs'
      },
      primaryYAxis: {
        title: 'Runs',
        valueType: 'Double',
        rangePadding: 'Normal'
      },
      title: "England - Run Rate"
    };
  },
  provide: {
    chart: [AreaSeries]
  },
};
</script>

```

```
<style>
  #container {
    height: 350px;
  }
</style>
```

```
{% previewsample "page.domainurl/code-snippet/chart/axis/double-cs6" %}
```

### Numeric - Auto

When the [rangePadding](#) is set to **Auto**, horizontal numeric axis takes

None as padding calculation, while the vertical numeric axis takes Normal as padding calculation.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>

{% previewsample "page.domainurl/code-snippet/chart/axis/double-cs7" %}

## Label Format

### Numeric Label Format

Numeric labels can be formatted by using the [labelFormat](#) property.

Numeric labels supports all globalize format.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='x'
yName='y' name='Product X' opacity=0.6> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries } from "@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[
        { x: 1900, y: 4, y1: 2.6, y2: 2.8 }, { x: 1920, y: 3.0, y1:
2.8, y2: 2.5 },
        { x: 1940, y: 3.8, y1: 2.6, y2: 2.8 }, { x: 1960, y: 3.4,
y1: 3, y2: 3.2 },
        { x: 1980, y: 3.2, y1: 3.6, y2: 2.9 }, { x: 2000, y: 3.9,
y1: 3, y2: 2 }
      ],
      primaryXAxis: {
        title: 'Year',
        edgeLabelPlacement: 'Shift'
      },
      primaryYAxis: {
        title: 'Sales Amount in Millions',
        labelFormat: 'c'
      },
      title: "Average Sales Comparison"
    };
  },
  provide: {
```

```

    chart: [LineSeries]
  },
};
</script>
<style>
#container {
  height: 350px;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/chart/axis/double-cs8" %}

The following table describes the result of applying some commonly used label formats on numeric values.

<!-- markdownlint-disable MD033 -->

Label Value	Label Format property value	Result	Description
1000	n1	1000.0	The Number is rounded to 1 decimal place
1000	n2	1000.00	The Number is rounded to 2 decimal place
1000	n3	1000.000	The Number is rounded to 3 decimal place
0.01	p1	1.0%	The Number is converted to percentage with 1 decimal place
0.01	p2	1.00%	The Number is converted to percentage with 2 decimal place
0.01	p3	1.000%	The Number is converted to percentage with 3 decimal place
1000	c1	\$1000.0	The Currency symbol is appended to number and number is rounded to 1 decimal place
1000	c2	\$1000.00	The Currency symbol is appended to number and number is rounded to 2 decimal place

GroupingSeperator

To separate groups of thousands, use [useGroupingSeparator](#) property in chart.

APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'
useGroupingSeparator='true'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column' xName='x'
yName='y' name='Product X' opacity=0.6> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
```

```

        </e-series-collection>
      </ejs-chart>

<!-- markdownlint-disable MD036 -->

## Date time axis in Vue Chart component

### DateTime Axis

Date time axis uses date time scale and displays the date time values as axis labels in the specified format.

### APP.VUE

```

<template>
    <div id="app">
        <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
            <e-series-collection>

```

```

        <e-series :dataSource='seriesData' type='Line' xName='x'
yName='y' name='Sales'> </e-series>
    </e-series-collection>
</ejs-chart>
</div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, DateTime } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
    data() {
        return {
            seriesData:[
                { x: new Date(2000, 6, 11), y: 10 }, { x: new Date(2002, 3,
7), y: 30 },
                { x: new Date(2004, 3, 6), y: 15 }, { x: new Date(2006, 3,
30), y: 65 },
                { x: new Date(2008, 3, 8), y: 90 }, { x: new Date(2010, 3,
8), y: 85 }
            ],
            primaryXAxis: {
                valueType: 'DateTime',
                title: 'Sales Across Years',
                labelFormat: 'yMMM'
            },
            primaryYAxis: {
                title: 'Sales Amount in millions(USD)',
            },
            title: "Average Sales Comparison"
        };
    },
    provide: {
        chart: [LineSeries, DateTime]
    }
};
</script>
<style>
    #container {
        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/datetime-cs2" %}

Note: To use datetime axis, we need to inject `DateTime` into the `provide` and set the `valueType` of axis to `DateTime`.

### DateTimeCategory Axis

Date-time category axis is used to display the date-time values with non-linear intervals. For example, the

business days alone have been depicted in a week here.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='x'
yName='y' name='Sales'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, DateTimeCategory } from "@syncfusion/ej2-
vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[{ x: new Date(2017, 11, 20), y: 21 }, { x: new Date(2017,
11, 21), y: 24 },
        { x: new Date(2017, 11, 22), y: 24 }, { x: new Date(2017,
11, 26), y: 70 },
        { x: new Date(2017, 11, 27), y: 75 }, { x: new Date(2018, 0,
2), y: 82 },
        { x: new Date(2018, 0, 3), y: 53 }, { x: new Date(2018, 0,
4), y: 54 },
        { x: new Date(2018, 0, 5), y: 53 }, { x: new Date(2018, 0,
8), y: 45 }
      ],
      primaryXAxis: {
        valueType: 'DateTimeCategory'
      },
      primaryYAxis: {
        title: 'Sales Amount in millions(USD)',
      },
      title: "Average Sales Comparison"
    };
  },
  provide: {
    chart: [LineSeries, DateTimeCategory]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/datetime-cs3" %}

Note: To use datetime axis, we need to inject `DateTimeCategory` into the `provide` and set the `valueType` of axis to `DateTimeCategory`. Of the axis using `minimum`, `maximum` and `interval` property of the axis.

**APP.VUE**

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='x'
yName='y' name='Sales'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, DateTime } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[
        { x: new Date(2000, 6, 11), y: 10 }, { x: new Date(2002, 3,
7), y: 30 },
        { x: new Date(2004, 3, 6), y: 15 }, { x: new Date(2006, 3,
30), y: 65 },
        { x: new Date(2008, 3, 8), y: 90 }, { x: new Date(2010, 3,
8), y: 85 }
      ],
      primaryXAxis: {
        valueType: 'DateTime',
        title: 'Sales Across Years',
        labelFormat: 'yMMM',
        minimum: new Date(2000, 6, 1),
        maximum: new Date(2010, 6, 1)
      },
      title: "Average Sales Comparison"
    };
  },
  provide: {
    chart: [LineSeries, DateTime]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/datetime-cs4" %}

*Interval Customization*

Date time intervals can be customized by using the [interval](#) and [intervalType](#) properties of the axis. For example, when you set interval as 2 and intervalType as years, it considers 2 years as interval.

DateTime axis supports following interval types,

- Auto
- Years
- Months
- Days
- Hours
- Minutes
- Seconds

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='x'
yName='y' name='Sales'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, DateTime } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[
        { x: new Date(2000, 6, 11), y: 10 }, { x: new Date(2002, 3,
7), y: 30 },
        { x: new Date(2004, 3, 6), y: 15 }, { x: new Date(2006, 3,
30), y: 65 },
        { x: new Date(2008, 3, 8), y: 90 }, { x: new Date(2010, 3,
8), y: 85 }
      ],
      primaryXAxis: {
        valueType: 'DateTime',
        intervalType: 'Years'
      },
      title: "Average Sales Comparison"
    };
  },
  provide: {
    chart: [LineSeries, DateTime]
  }
};
</script>
<style>
#container {
  height: 350px;
}
```

```
</style>
```

```
{% previewsample "page.domainurl/code-snippet/chart/axis/datetime-cs5" %}
```

### Applying Padding to the Range

Padding can be applied to the minimum and maximum extremes of the range by using the [rangePadding](#) property. Date time axis supports the following types

- None
- Additional

### DateTime - None

When the [rangePadding](#) is set to **None**, minimum and maximum of the axis is based on the data.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='x'
yName='y' name='Sales'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, DateTime } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[
        { x: new Date(2000, 6, 11), y: 10 }, { x: new Date(2002, 3,
7), y: 30 },
        { x: new Date(2004, 3, 6), y: 15 }, { x: new Date(2006, 3,
30), y: 65 },
        { x: new Date(2008, 3, 8), y: 90 }, { x: new Date(2010, 3,
8), y: 85 }
      ],
      primaryXAxis: {
        valueType: 'DateTime',
        title: 'Sales Across Years',
        labelFormat: 'yMMM',
        rangePadding: 'None'
      },
      title: "Average Sales Comparison"
    };
  },
  provide: {
```

```

    chart: [LineSeries, DateTime]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/datetime-cs6" %}

### DateTime - Round

When the [rangePadding](#) is set to **Round**, minimum and maximum will be

rounded to the nearest possible value divisible by interval. For example, when the minimum is 15th Jan, interval is

1 and the interval type is 'month', then the axis minimum will be Jan 1st.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='x'
yName='y' name='Sales'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, DateTime } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[
        { x: new Date(2000, 6, 11), y: 10 }, { x: new Date(2002, 3,
7), y: 30 },
        { x: new Date(2004, 3, 6), y: 15 }, { x: new Date(2006, 3,
30), y: 65 },
        { x: new Date(2008, 3, 8), y: 90 }, { x: new Date(2010, 3,
8), y: 85 }
      ],
      primaryXAxis: {
        valueType: 'DateTime',
        title: 'Sales Across Years',
        labelFormat: 'yMMM',
        rangePadding: 'Round'
      },
      title: "Average Sales Comparison"
    }
  }
}

```

```

    };
  },
  provide: {
    chart: [LineSeries, DateTime]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/datetime-cs7" %}

### DateTime - Additional

When the [rangePadding](#) is set to **Additional**, interval of an axis will be padded to the minimum and maximum of the axis.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='x'
yName='y' name='Sales'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, DateTime } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[
        { x: new Date(2000, 6, 11), y: 10 }, { x: new Date(2002, 3,
7), y: 30 },
        { x: new Date(2004, 3, 6), y: 15 }, { x: new Date(2006, 3,
30), y: 65 },
        { x: new Date(2008, 3, 8), y: 90 }, { x: new Date(2010, 3,
8), y: 85 }
      ],
      primaryXAxis: {
        valueType: 'DateTime',
        title: 'Sales Across Years',
        labelFormat: 'yMMM',
        rangePadding: 'Additional'
      },
      title: "Average Sales Comparison"
    }
  }
}

```

```

    };
  },
  provide: {
    chart: [LineSeries, DateTime]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/datetime-cs8" %}

### Label Format

You can format and parse the date to all globalize format using [labelFormat](#) property in an axis.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='x'
yName='y' name='Sales'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, DateTime } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[
        { x: new Date(2000, 6, 11), y: 10 }, { x: new Date(2002, 3,
7), y: 30 },
        { x: new Date(2004, 3, 6), y: 15 }, { x: new Date(2006, 3,
30), y: 65 },
        { x: new Date(2008, 3, 8), y: 90 }, { x: new Date(2010, 3,
8), y: 85 }
      ],
      primaryXAxis: {
        valueType: 'DateTime',
        title: 'Sales Across Years',
        labelFormat: 'yMd'
      },
      primaryYAxis: {
        title: 'Sales Amount in millions(USD)',
      },
      title: "Average Sales Comparison"
    }
  }
}

```

```

    };
  },
  provide: {
    chart: [LineSeries, DateTime]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/datetime-cs9" %}

The following table describes the result of applying some common date time formats to the labelFormat property

<!-- markdownlint-disable MD033 -->

Label Value	Label Format Property Value	Result	Description
new Date(2000, 03, 10)	EEEE	Monday	The Date is displayed in day format
new Date(2000, 03, 10)	yMd	04/10/2000	The Date is displayed in month/date/year format
new Date(2000, 03, 10)	MMM	Apr	The Shorthand month for the date is displayed
new Date(2000, 03, 10)	hm	12:00 AM	Time of the date value is displayed as label
new Date(2000, 03, 10)	hms	12:00:00 AM	The Label is displayed in hours:minutes:seconds format

<!-- markdownlint-disable MD033 -->

### Logarithmic axis in Vue Chart component

<!-- markdownlint-disable MD033 -->

Logarithmic axis uses logarithmic scale and it is very useful in visualizing data, when it has numeric values in both lower order of magnitude (eg:  $10^{-6}$ ) and higher order of magnitude (eg:  $10^6$ ).

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
    :primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='x'
        yName='y' name='Product X'> </e-series>
      </e-series-collection>

  },
  provide: {
    chart: [LineSeries, Logarithmic, DateTime]
  },
};
  </script>
  <style>
    #container {
      height: 350px;
    }
  </style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/log-cs1" %}

Note: To use log axis, we need to inject `Logarithmic` into the `provide` and set the `valueType` of axis to `Logarithmic`.

## Range

Range of an axis, will be calculated automatically based on the provided data, you can also customize the range

of the axis using [minimum](#), [maximum](#) and [interval](#) property of the axis.

## APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='x'
yName='y' name='Product X'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, Logarithmic, DateTime } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[
        { x: new Date(1995, 0, 1), y: 80 }, { x: new Date(1996, 0,
1), y: 200 },
        { x: new Date(1997, 0, 1), y: 400 }, { x: new Date(1998, 0,
1), y: 600 },
        { x: new Date(1999, 0, 1), y: 700 }, { x: new Date(2000, 0,
1), y: 1400 },
        { x: new Date(2001, 0, 1), y: 2000 }, { x: new Date(2002, 0,
1), y: 4000 },
        { x: new Date(2003, 0, 1), y: 6000 }, { x: new Date(2004, 0,
1), y: 8000 },
        { x: new Date(2005, 0, 1), y: 11000 }
      ],
      primaryXAxis: {
        valueType: 'DateTime',
        title: 'Years',
        labelFormat: 'y'
      },
      primaryYAxis: {
        valueType: 'Logarithmic',
        title: 'Profit',
        minimum: 100,
        maximum: 10000
      },
      title: "Product X Growth [1995-2005]"
    };
  },
  provide: {
    chart: [LineSeries, Logarithmic, DateTime]
  },
}
```

```
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>
```

{% previewsample "page.domainurl/code-snippet/chart/axis/log-cs2" %}

### Logarithmic Base

Logarithmic base can be customized by using the [logBase](#) property of the axis.

For example when the logBase is 5, the axis values follows  $5^{-2}$ ,  $5^{-1}$ ,  $5^0$ ,

$5^1$ ,  $5^2$  etc.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
      :primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='x'
          yName='y' name='Product X'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, Logarithmic, DateTime } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[
        { x: new Date(1995, 0, 1), y: 80 }, { x: new Date(1996, 0,
1), y: 200 },
        { x: new Date(1997, 0, 1), y: 400 }, { x: new Date(1998, 0,
1), y: 600 },
        { x: new Date(1999, 0, 1), y: 700 }, { x: new Date(2000, 0,
1), y: 1400 },
        { x: new Date(2001, 0, 1), y: 2000 }, { x: new Date(2002, 0,
1), y: 4000 },
        { x: new Date(2003, 0, 1), y: 6000 }, { x: new Date(2004, 0,
1), y: 8000 },
        { x: new Date(2005, 0, 1), y: 11000 }
      ],
      primaryXAxis: {
        valueType: 'DateTime',
        title: 'Years',
        labelFormat: 'y'
      },
    }
  }
}
```

```

        primaryYAxis: {
            valueType: 'Logarithmic',
            title: 'Profit',
            logBase: 2
        },
        title: "Product X Growth [1995-2005]"
    };
};
</script>
<style>
    #container {
        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/log-cs3" %}

### Logarithmic Interval

Logarithmic axis interval can be customized by using the [interval](#)

property of the axis. When the logarithmic base is 10 and logarithmic interval is 2, then the axis labels are

placed at an interval of  $10^2$ . The default value of the interval is 1.

### APP.VUE

```

<template>
    <div id="app">
        <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>

{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs10" %}

### Multilevel Labels

Any number of levels of labels can be added to an axis using the `multiLevelLabels` property. This property can be configured using the following properties:

- Categories
- Overflow
- Alignment
- Text style
- Border

Note: To use multilevel label feature, we need to inject `MultiLevelLabel` into the `provide`.

### Categories

Using the categories property, you can configure the `start`, `end`, `text`, and `maximumTextWidth` of multilevel labels.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
    :primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
        xName='country' yName='gold' name='Gold'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>

```

```

</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category, MultiLevelLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50 },
        { country: "China", gold: 40 },
        { country: "Japan", gold: 70 },
        { country: "Australia", gold: 60 },
        { country: "France", gold: 50 },
        { country: "Germany", gold: 40 },
        { country: "Italy", gold: 40 },
        { country: "Sweden", gold: 30 }
      ],
      primaryXAxis: {
        valueType: 'Category',
        multiLevelLabels:[{ categories: [
          {
            //Start and end values of the multi-level labels
            accepts number, date and string values
            start: -0.5,
            end: 3.5,
            //Multi-level label's text.
            text: 'Half Yearly 1',
          },
          { start: 3.5, end: 7.5, text: 'Half Yearly 2' },
        ]}]
      },
      title: "Olympic Medals"
    };
  },
  provide: {
    chart: [ColumnSeries, Category, MultiLevelLabel]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs11" %}

### Overflow

Using the `overflow` property, you can `trim` or `wrap` the multilevel labels.

### APP.VUE

```

<template>
  <div id="app">

```

```

<ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
  <e-series-collection>
    <e-series :dataSource='seriesData' type='Column'
xName='country' yName='gold' name='Gold'> </e-series>
  </e-series-collection>
</ejs-chart>
</div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category, MultiLevelLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50 },
        { country: "China", gold: 40 },
        { country: "Japan", gold: 70 },
        { country: "Australia", gold: 60 },
        { country: "France", gold: 50 },
        { country: "Germany", gold: 40 },
        { country: "Italy", gold: 40 },
        { country: "Sweden", gold: 30 }
      ],
      primaryXAxis: {
        valueType: 'Category',
        multiLevelLabels:[{
          categories: [{start: -0.5, end: 3.5, text: 'Half Yearly 1',
maximumTextWidth:50 },
{ start: 3.5, end: 7.5, text: 'Half Yearly
2',maximumTextWidth:50 }]],
          overflow:'Trim'
        }]
      },
      title: "Olympic Medals"
    };
  },
  provide: {
    chart: [ColumnSeries, Category, MultiLevelLabel]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs12" %}

### Alignment

The **alignment** property provides option to position the multilevel labels at **far**, **center**, or **near**.

**APP.VUE**

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='gold' name='Gold'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category, MultiLevelLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50 },
        { country: "China", gold: 40 },
        { country: "Japan", gold: 70 },
        { country: "Australia", gold: 60 },
        { country: "France", gold: 50 },
        { country: "Germany", gold: 40 },
        { country: "Italy", gold: 40 },
        { country: "Sweden", gold: 30 }
      ],
      primaryXAxis: {
        valueType: 'Category',
        multiLevelLabels:[{
          categories: [{start: -0.5, end: 3.5, text: 'Half Yearly 1' },
            { start: 3.5, end: 7.5, text: 'Half Yearly 2' }]],
          alignment : 'Far'
        }]
      },
      title: "Olympic Medals"
    };
  },
  provide: {
    chart: [ColumnSeries, Category, MultiLevelLabel]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs13" %}

*Text customization*

The `textStyle` property of multilevel labels provides options to customize the `size`, `color`, `fontFamily`, `fontWeight`, `fontStyle`, `opacity`, `textAlignment` and `textOverflow`.

**APP.VUE**

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'

        { country: "Sweden", gold: 30 }
      ],
      primaryXAxis: {
        valueType: 'Category',
        multiLevelLabels:[{
          categories: [{start: -0.5, end: 3.5, text: 'Half Yearly 1' },
            { start: 3.5, end: 7.5, text: 'Half Yearly 2' }],
          textStyle:{size:'18px', color:'Red'}
        }]
      },
      title: "Olympic Medals"
    };
  },
  provide: {
    chart: [ColumnSeries, Category, MultiLevelLabel]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs14" %}

### Border customization

Using the **border** property, you can customize the **width**, **color**, and **type**. The **type** of border are **Rectangle**, **Brace**, **WithoutBorder**, **WithoutTopBorder**, **WithoutTopandBottomBorder** and **CurlyBrace**.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='gold' name='Gold'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category, MultiLevelLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50 },
        { country: "China", gold: 40 },
        { country: "Japan", gold: 70 },
        { country: "Australia", gold: 60 },
        { country: "France", gold: 50 },
        { country: "Germany", gold: 40 },
        { country: "Italy", gold: 40 },
        { country: "Sweden", gold: 30 }
      ],
      primaryXAxis: {
        valueType: 'Category',
        multiLevelLabels:[{
          categories: [{start: -0.5, end: 3.5, text: 'Half Yearly 1' },
            { start: 3.5, end: 7.5, text: 'Half Yearly 2' }]],
          border:{type:'Brace', color:'Blue', width: 2},
        }]
      },
      title: "Olympic Medals"
    };
  },
  provide: {
    chart: [ColumnSeries, Category, MultiLevelLabel]
  }
};
</script>
```

```
<style>

    height: 350px;
  }
</style>
```

```
{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs15" %}
```

### Edge Label Placement

Labels with long text at the edges of an axis may appear partially in the chart. To avoid this, use [edgeLabelPlacement](#) property in axis, which moves the label inside the chart area for better appearance or hides it.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='x'
yName='y' name='Sales'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, DateTime } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[
        { x: new Date(2000, 6, 11), y: 10 }, { x: new Date(2002, 3,
7), y: 30 },
        { x: new Date(2004, 3, 6), y: 15 }, { x: new Date(2006, 3,
30), y: 65 },
        { x: new Date(2008, 3, 8), y: 90 }, { x: new Date(2010, 3,
8), y: 85 }
      ],
      primaryXAxis: {
        valueType: 'DateTime',
        title: 'Sales Across Years',
        labelFormat: 'yMMM',
        minimum: new Date(2000, 6, 1),
        maximum: new Date(2010, 6, 1),
        edgeLabelPlacement: 'Shift'
      },
      title: "Average Sales Comparison"
    };
  },
  provide: {
    chart: [LineSeries, DateTime]
  }
}
```

```
};
</script>
<style>

    height: 350px;
  }
</style>
```

{% previewsample "page.domainurl/code-snippet/chart/axis/datetime-cs1" %}

### Labels Customization

The [labelStyle](#) property of an axis provides options to customize the color, font-family, font-size and font-weight of the axis labels.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='gold' name='Gold'> </e-series>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='silver' name='Silver'> </e-series>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='bronze' name='Bronze'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50, silver: 70, bronze: 45 },
        { country: "China", gold: 40, silver: 60, bronze: 55 },
        { country: "Japan", gold: 70, silver: 60, bronze: 50 },
        { country: "Australia", gold: 60, silver: 56, bronze: 40 },
        { country: "France", gold: 50, silver: 45, bronze: 35 },
        { country: "Germany", gold: 40, silver: 30, bronze: 22 },
        { country: "Italy", gold: 40, silver: 35, bronze: 37 },
        { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
      ],
      primaryXAxis: {
        valueType: 'Category',
        title: 'Countries'
      },
      primaryYAxis: {
        minimum: 0, maximum: 80,
        interval: 20, title: 'Medals',
```

```

        labelFormat: '${value}K',
        titleStyle: {
            size: '16px', color: 'grey',
            fontFamily: 'Segoe UI', fontWeight: 'bold'
        },
        labelStyle: {
            size: '14px', color: 'blue',
            fontFamily: 'Segoe UI', fontWeight: 'bold'
        }
    },
    title: "Olympic Medals"
};
},
provide: {
    chart: [ColumnSeries, Category]
}
};
</script>
<style>
    #container {
        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs16" %}

### Customizing Specific Point

You can customize the specific text in the axis labels using `axisLabelRender` event.

### APP.VUE

```

<template>
    <div id="app">
        <ejs-chart id="container" :title='title'
        :primaryXAxis='primaryXAxis' >
            <e-series-collection>
                <e-series :dataSource='seriesData' type='Column'
                xName='country' yName='gold' name='Gold'> </e-series>
            </e-series-collection>
        </ejs-chart>
    </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
    data() {
        return {
            seriesData: [
                { country: "USA", gold: 50 },
                { country: "China", gold: 40 },
                { country: "Japan", gold: 70 },
                { country: "Australia", gold: 60 },
                { country: "France", gold: 50 },
            ]
        }
    }
}

```

```

        { country: "Germany", gold: 40 },
        { country: "Italy", gold: 40 },
        { country: "Sweden", gold: 30 }
      ],
      primaryXAxis: {
        valueType: 'Category',
        title: 'Countries'
      },
      title: "Olympic Medals"
    };
  },
  provide: {
    chart: [ColumnSeries, Category]
  },
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs17" %}

Trim using maximum label width

You can trim the label using [enableTrim](#) property and width of the labels can also be customized using [maximumLabelWidth](#) property in the axis, the value maximum label width is 34 by default.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
    :primaryXAxis='primaryXAxis' :axisLabelRender='axisLabelRender'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
        xName='country' yName='gold' name='Gold'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category } from "@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50 },
        { country: "China", gold: 40 },
        { country: "Japan", gold: 70 },
        { country: "Australia", gold: 60 },
        { country: "France", gold: 50 },
        { country: "Germany", gold: 40 },

```

```

        { country: "Italy", gold: 40 },
        { country: "Sweden", gold: 30 }
      ],
      primaryXAxis: {
        valueType: 'Category',
        title: 'Countries',
        enableTrim: true,
        maximumLabelWidth: '22'
      },
      title: "Olympic Medals"
    };
  },
  provide: {
    chart: [ColumnSeries, Category]
  },
  methods: {
    axisLabelRender: function(args) {
      if(args.text === 'France') {
        args.labelStyle.color = 'Red';
      }
    }
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs18" %}

### Line break support

Line break feature used to customize the long axis label text into multiple lines by using tag. Refer the below example in that dataSource x value contains long text, it breaks into two lines by using `<br>` tag.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :primaryXAxis='primaryXAxis'
    :primaryYAxis='primaryYAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Bar' xName='x'
        yName='y' name='Users' :marker='marker' tooltipMappingName='country'> </e-
        series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, BarSeries, DateTime, Category, DataLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {

```

```

data() {
  return {
    seriesData:[
      { x: 'Germany', y: 72, country: 'GER: 72'},
      { x: 'Russia', y: 103.1, country: 'RUS: 103.1'},

```

{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs19" %}

## Axis customization in Vue Chart component

### Axis Crossing

An axis can be positioned in the chart area using `crossesAt` and `crossesInAxis` properties. The `crossesAt`

property specifies the values (datetime, numeric, or logarithmic) at which the axis line has to be intersected

with the vertical axis or vice-versa, and the `crossesInAxis` property specifies the axis name with which the

axis line has to be crossed.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='gold' name='Gold'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50 },
        { country: "China", gold: 40 },
        { country: "Japan", gold: 70 },
        { country: "Australia", gold: 60 },
        { country: "France", gold: 50 },
        { country: "Germany", gold: 40 },
        { country: "Italy", gold: 40 },
        { country: "Sweden", gold: 30 }
      ],
      primaryXAxis: {
        valueType: 'Category',
        crossesAt : 15
      },
      primaryYAxis:
      {
        crossesAt : 5
      },
      title: "Olympic Medals"
    };
  },
  provide: {
    chart: [ColumnSeries, Category]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>
```

{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs2" %}

### Title

You can add a title to the axis using [title](#) property to provide quick information to the user about the data plotted in the axis.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='gold' name='Gold'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50 },
        { country: "China", gold: 40 },
        { country: "Japan", gold: 70 },
        { country: "Australia", gold: 60 },
        { country: "France", gold: 50 },
        { country: "Germany", gold: 40 },
        { country: "Italy", gold: 40 },
        { country: "Sweden", gold: 30 }
      ],
      primaryXAxis: {
        valueType: 'Category',
        title: 'Countries'
      },
      primaryYAxis:
      {
        minimum: 0, maximum: 80,
        interval: 20, title: 'Medals',
        labelFormat: '${value}K',
        titleStyle: {
          size: '16px', color: 'grey',
          fontFamily : 'Segoe UI', fontWeight : 'bold'
        }
      },
      title: "Olympic Medals"
    };
  },
  provide: {
```

```

    chart: [ColumnSeries, Category]
  },
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs3" %}

### Title Rotation

By using the [titleRotation](#) property, you can rotate the axis title from 0 to 360 degree.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='gold' name='Gold'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50 },
        { country: "China", gold: 40 },
        { country: "Japan", gold: 70 },
        { country: "Australia", gold: 60 },
        { country: "France", gold: 50 },
        { country: "Germany", gold: 40 },
        { country: "Italy", gold: 40 },
        { country: "Sweden", gold: 30 }
      ],
      primaryXAxis: {
        valueType: 'Category',
        title: 'Countries', titleRotation: 90,
        titleStyle: {
          size: '16px', color: 'grey',
          fontFamily : 'Segoe UI', fontWeight : 'bold'
        }
      },
      primaryYAxis:
    {

```

```

        minimum: 0, maximum: 80,
        interval: 20, title: 'Medals',
        labelFormat: '${value}K',
    },
    title: "Olympic Medals"
};
},
provide: {
    chart: [ColumnSeries, Category]
},
};
</script>
<style>
    #container {
        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs4" %}

### Tick Lines Customization

You can customize the **width**, **color** and **size** of the minor and major tick lines, using [majorTickLines](#) and [minorTickLines](#) properties in the axis.

### APP.VUE

```

<template>
    <div id="app">
        <ejs-chart id="container" :title='title'
        :primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
            <e-series-collection>
                <e-series :dataSource='seriesData' type='Column' xName='x'
                yName='y' name='Temperature'> </e-series>
            </e-series-collection>
        </ejs-chart>
    </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);

        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs5" %}

### Grid Lines Customization

You can customize the **width**, **color** and **dashArray** of the minor and major grid lines, using [majorGridLines](#) and [minorGridLines](#) properties in the axis.

### APP.VUE

```

<template>
    <div id="app">
        <ejs-chart id="container" :title='title'
        :primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
            <e-series-collection>
                <e-series :dataSource='seriesData' type='Column' xName='x'
                yName='y' name='Temperature'> </e-series>
            </e-series-collection>
        </ejs-chart>
    </div>
</template>
<script>

```

```

import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category } from "@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: 60 }, { x: 'Feb', y: 50 }, { x: 'Mar', y: 64 },
        { x: 'Apr', y: 63 }, { x: 'May', y: 81 }, { x: 'Jun', y: 64 },
        { x: 'Jul', y: 82 }, { x: 'Aug', y: 96 }, { x: 'Sep', y: 78 },
        { x: 'Oct', y: 60 }, { x: 'Nov', y: 58 }, { x: 'Dec', y: 56 }
      ],

{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs6" %}

## Multiple Axis

In addition to primary X and Y axis, we can add n number of axis to the chart. Series can be associated with

this axis, by mapping with axis's unique name.

### APP.VUE

<!-- markdownlint-disable MD036 -->

### Strip line in Vue Chart component

<!-- markdownlint-disable MD036 -->

EJ2 chart supports horizontal and vertical strip lines and customization of stripline in both orientation.

To use Stripline in axis, we need to inject **Stripline** into the **provide**

#### Horizontal Strip lines

You can create Horizontal stripline by adding the **stripline** in the vertical axis and set **visible** option to true. Striplines are rendered in the specified start to end range and you can add more than one stripline for an axis.

#### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
    :primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column' xName='x'
        yName='y' name='Run Rates'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, StripLine } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        {x: 1, y: 20}, {x: 2, y: 22}, {x: 3, y: 0}, {x: 4, y: 12}, {x:
5, y: 5},
        {x: 6, y: 15}, {x: 7, y: 6}, {x: 8, y: 12}, {x: 9, y: 20}, {x:
10, y: 7}
      ],
    }
  }
}

```

```

        primaryYAxis:
        {
            title: 'Runs',
            stripLines:[
                { start: 15, end: 22, text: 'Good', color: '#ff512f', visible:
true, zIndex: 'Behind', opacity: 0.5 }
                { start: 8, end: 15, text: 'Medium', color: 'pink', opacity:
0.5, visible: true, zIndex: 'Behind' }
                { start: 0, end: 8, text:'Not enough', color: 'skyblue',
opacity: 0.5, visible: true, zIndex: 'Behind' }}
            ],
            primaryXAxis: {
                title: 'Overs'
            },
            title: "India Vs Australia 1st match"
        };
    },
    provide: {
        chart: [ColumnSeries, StripLine]
    },
};
</script>
<style>
    #container {
        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/strip-line-cs1" %}

### Vertical Striplines

You can create vertical stripline by adding the `stripline` in the horizontal axis and set `visible` option to true. Striplines are rendered in the specified start to end range and you can add more than one stripline for an axis.

### APP.VUE

```

<template>
    <div id="app">
        <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis':primaryYAxis='primaryYAxis'>
            <e-series-collection>
                <e-series :dataSource='seriesData' type='Column' xName='x'
yName='y' name='Run Rates'> </e-series>
            </e-series-collection>
        </ejs-chart>
    </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, StripLine } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
    data() {
        return {

```

```

        seriesData: [
            {x: 1, y: 20}, {x: 2, y: 22}, {x: 3, y: 0}, {x: 4, y: 12}, {x:
5, y: 5},
            {x: 6, y: 15}, {x: 7, y: 6}, {x: 8, y: 12}, {x: 9, y: 20}, {x:
10, y: 7}
        ],
        primaryYAxis:
        {
            title: 'Runs'
        },
        primaryXAxis: {
            title: 'Overs',
            stripLines:[
                {start: 0, end: 5, text: 'powerplay 1', color: 'red', visible:
true, opacity: 0.5, rotation: 45, textStyle: { size: 20, color: 'black'}},
                {start: 5, end: 10, text: 'powerplay 2', color: 'blue', visible:
true, opacity: 0.5, rotation: 45, textStyle: { size: 20, color: 'black'}},
            ]
        },
        title: "India Vs Australia 1st match"
    };
},
provide: {
    chart: [ColumnSeries, StripLine]
},
}
</script>
<style>
    #container {
        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/strip-line-cs2" %}

### Customize the strip line

Starting value in specific strip line can be customized by **start** property in strip line. Similarly, ending value is customized by **end**. It can be also set for starting from the corresponding origin of the axis by **startFromOrigin**. Size of the strip line is customized by **size**. Border for the stripline is customized by **border**. Order of the strip line such that whether it should be rendered in behind or over the series elements

is customized by **zIndex**.

### APP.VUE

```

<template>
    <div id="app">
        <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
            <e-series-collection>
                <e-series :dataSource='seriesData' type='Column' xName='x'
yName='y' name='Run Rates'> </e-series>
            </e-series-collection>
        </ejs-chart>
    </div>
</template>

```

```

    </div>
  </template>
  <script>
  import Vue from "vue";
  import { ChartPlugin, ColumnSeries, StripLine } from "@syncfusion/ej2-vue-charts";
  Vue.use(ChartPlugin);
  export default {
    data: function() {
      return {
        seriesData: [
          {x: 1, y: 20},{x: 2, y: 22},{x: 3, y: 0},{x: 4, y: 12},{x:
5, y: 5},
          {x: 6, y: 15},{x: 7, y: 6},{x: 8, y: 12},{x: 9, y: 20},{x:
10, y: 7}
        ],
        primaryYAxis:
        {
          title: 'Runs'
        },
        primaryXAxis: {
          stripLines:[
            { startFromOrigin: true, size: 4, zIndex: 'Behind', opacity:
0.5, border: { width: 2, color:'red'}}
          ],
          title: 'Overs'
        },
        title: "India Vs Australia 1st match"
      };
    },
    provide: {
      chart: [ColumnSeries, StripLine]
    },
  };
  </script>
  <style>
  #container {
    height: 350px;
  }
  </style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/strip-line-cs3" %}

### Customize the stripline text

You can customize the text rendered in stripline by `textStyle` property. Rotation of the strip line text can be changed by `rotation` property. Horizontal and Vertical alignment of stripline text can be changed by `horizontalAlignment` and `verticalAlignment` property.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
      <e-series-collection>

```

```

        <e-series :dataSource='seriesData' type='Column' xName='x'
yName='y' name='Run Rates'> </e-series>
    </e-series-collection>
</ejs-chart>
</div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, StripLine } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
    data() {
        return {
            seriesData: [
                {x: 1, y: 20},{x: 2, y: 22},{x: 3, y: 0},{x: 4, y: 12},{x:
5, y: 5},
                {x: 6, y: 15},{x: 7, y: 6},{x: 8, y: 12},{x: 9, y: 20},{x:
10, y: 7}
            ],
            primaryYAxis:
            {
                title: 'Runs'
            },
            primaryXAxis: {
                stripLines:[
                    { startFromOrigin: true, size: 4, zIndex: 'Behind', opacity:
0.5, text: 'Good', verticalAlignment: 'Middle', horizontalAlignment:
'Middle', rotation: 90, textStyle: { size: 15}},
                    { start: 5, end: 8, verticalAlignment: 'Start',
horizontalAlignment: 'End', rotation: 45, text: 'Poor'}
                ],
                title: 'Overs'
            },
            title: "India Vs Australia 1st match"
        };
    },
    provide: {
        chart: [ColumnSeries, StripLine]
    },
};
</script>
<style>
#container {
    height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/strip-line-cs4" %}

### Dash Array

You can create dash array stripline by using `dashArray` property. The Striplines are rendered with specified dash array values.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :primaryYAxis='primaryYAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='x'
yName='y' name='Run Rates'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, StripLine, LineSeries } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        {x: 1, y: 5},{x: 2, y: 39},{x: 3, y: 21},{x: 4, y: 51},{x:
5, y: 30},
        {x: 6, y: 25},{x: 7, y: 10},{x: 8, y: 40},{x: 9, y: 50},{x:
10, y: 20}
      ],
      primaryYAxis:
      {
        minimum: 0,
        maximum: 60,
        interval: 10,
        stripLines:[
          { start: 30, size: 2, sizeType: 'Pixel', dashArray:"10,5",
color: "red"}
        ],
      },
    };
  },
  provide: {
    chart: [ColumnSeries, StripLine, LineSeries]
  },
};
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/strip-line-cs5" %}

### Recurrence Stripline

The strip lines to be drawn repeatedly at the regular intervals – this will be useful when you want to mark an event that occurs recursively along the timeline of the chart. Following properties are used to configure this feature.

- **isRepeat** - It is used for enable / disable the recurrence strip line.

- **repeatEvery** - It is used for mention the stripline interval.
- **repeatUntil** - It specifies the end value at which point strip line has to stop repeating.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :primaryXAxis='primaryXAxis'>

### Size Type

The **sizeType** property refers the size of the stripline. They are,

- **Auto**

- Pixel
- Years
- Months
- Days
- Hours
- Minutes
- Seconds

### Segment Stripline

You can create the stripline in a particular region with respect to the segment. You can enable the segment stripline using `isSegmented` property. The start and end value of this type of stripline can be defined using `segmentStart` and `segmentEnd` properties.

- `isSegmented` - It is used for enable the segment stripline.
- `segmentStart` - Used to change the segment start value. Value correspond to associated axis.
- `segmentEnd` - Used to change the segment end value. Value correspond to associated axis.
- `segmentAxisName` - Used to specify the name of the associated axis.

## Multiple panes in Vue Chart component

Chart area can be divided into multiple panes using [rows](#) and [columns](#).

### Rows

To split the chart area vertically into number of rows, use [rows](#) property of the chart.

- You can allocate space for each row by using the [height](#) property. The value can be either in percentage or in pixel.
- To associate a vertical axis to a particular row, specify its index to

[rowIndex](#) property of the axis.

- To customize each row's bottom line, use [border](#) property.

## Chart Types

### Line Chart in Vue Chart component

#### Line

To render a line series, use series [type](#) as `Line` and inject `LineSeries` into the `provide`.

#### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='x'
yName='y' name='India'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries } from "@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);

```

```

export default {
  data() {
    return {
      seriesData: [
        { x: 2005, y: 28 }, { x: 2006, y: 25 }, { x: 2007, y: 26 }, { x:
2008, y: 27 },
        { x: 2009, y: 32 }, { x: 2010, y: 35 }, { x: 2011, y: 30 }
      ],
      title: "Efficiency of oil-fired power production"
    };
  },
  provide: {
    chart: [LineSeries]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/line-cs1" %}

### Multicolored Line

To render a multicolored line series, use the series type as **MultiColoredLine**, and inject the **MultiColoredLineSeries** into the **provide**. Here, the individual colors to the data can be mapped by using **pointColorMapping**.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='MultiColoredLine'
xName='x' yName='y' name='London' width=2
        :marker='marker' pointColorMapping= 'color'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, MultiColoredLineSeries } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[
        { x: 2005, y: 28 , color: 'red'}, { x: 2006, y: 25, color:'green'},
        { x: 2007, y: 26, color: '#ff0097' }, { x: 2008, y: 27, color:
'crimson' },

```

### Spline in Vue Chart Component

#### [Spline](#)

To render a spline series, use series [type](#) as `Spline` and inject `SplineSeries` into the `provide`.

#### **APP.VUE**

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
    :primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Spline' xName='x'
        yName='y' name='London' width=2

```

```

        :marker='marker'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, SplineSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[
        { x: 'Jan', y: -1 }, { x: 'Feb', y: -1 }, { x: 'Mar', y: 2 },
        { x: 'Apr', y: 8 }, { x: 'May', y: 13 }, { x: 'Jun', y: 18 },
        { x: 'Jul', y: 21 }, { x: 'Aug', y: 20 }, { x: 'Sep', y: 16 },
        { x: 'Oct', y: 10 }, { x: 'Nov', y: 4 }, { x: 'Dec', y: 0 }
      ],
      primaryXAxis: {
        title: 'Month',
        valueType: 'Category'
      },
      marker: { visible: true, width: 10, height: 10 },
      title: "Climate Graph-2012"
    };
  },
  provide: {
    chart: [SplineSeries, Category]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/line-cs5" %}

### Series customization

The following properties can be used to customize the **spline** series.

- [fill](#) – Specifies the color of the series.
- [opacity](#) – Specifies the opacity of [fill](#).
- [dashArray](#) – Specifies the dashes for series.
- [width](#) – Specifies the width for series.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
    :primaryXAxis='primaryXAxis'>
      <e-series-collection>

```

```

        <e-series :dataSource='seriesData' type='Spline' xName='x'
yName='y' name='London' width=2
        :marker='marker' fill="red" :border="border"
dashArray='2.5'> </e-series>
    </e-series-collection>
</ejs-chart>
</div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, SplineSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
    data() {
        return {
            seriesData:[
                { x: 'Jan', y: -1 }, { x: 'Feb', y: -1 }, { x: 'Mar', y: 2 },
                { x: 'Apr', y: 8 }, { x: 'May', y: 13 }, { x: 'Jun', y: 18 },
                { x: 'Jul', y: 21 }, { x: 'Aug', y: 20 }, { x: 'Sep', y: 16 },

## Area in Vue Chart Component

### Area

To render a area series, use series [type](#) as `Area` and inject `AreaSeries` into the `provide`.

**APP.VUE**

```

<template>
  <div id="app">
    <ejs-chart>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Area' xName='x'
yName='y' name='India'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, AreaSeries } from "@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[
        { x: 1900, y: 4 }, { x: 1920, y: 3.0 }, { x: 1940, y: 3.8 },
        { x: 1960, y: 3.4 }, { x: 1980, y: 3.2 }, { x: 2000, y: 3.9 }
      ]
    };
  },
  provide: {
    chart: [AreaSeries]
  },
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/area-cs1" %}

*Multicolored area*

To render a multicolored area series, use the series type as **MultiColoredArea**, and inject the **MultiColoredAreaSeries** into the **provide**. The required **segments** of the series can be customized using the **value**, **color**, and **dashArray**.

**APP.VUE**

```

<template>
  <div id="app">
    <ejs-chart :title='title'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='MultiColoredArea'
xName='x' yName='y' name='England'
          segmentAxis='X' :segments='segments'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>

```

```

<script>
import Vue from "vue";
import { ChartPlugin, MultiColoredAreaSeries } from "@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[
        { x: 2005, y: 28 }, { x: 2006, y: 25},
        { x: 2007, y: 26 }, { x: 2008, y: 27 },
        { x: 2009, y: 32}, { x: 2010, y: 35 },
        { x: 2011, y: 25 }
      ],
      title: 'England - Run Rate',
      segments: [{
        value: 2007,
        color: 'blue'
      }, {
        value: 2009,
        color: 'lightgreen'
      }, {
        color: 'orange'
      }
    ],
  };
},
provide: {
  chart: [MultiColoredAreaSeries]
}
};
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/area-cs8" %}

### Series customization

The following properties can be used to customize the **area** series.

- [fill](#) – Specifies the color of the series.
- [opacity](#) – Specifies the opacity of [fill](#).
- [dashArray](#) – Specifies the dashes for series.
- [width](#) – Specifies the width for series.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Area' xName='x'
yName='y' name='Product A'

```

```

        fill='green' width=2 dashArray='5,5' :border='border'
opacity=0.6> </e-series>
    </e-series-collection>
</ejs-chart>
</div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, AreaSeries } from "@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
    data() {
        return {
            seriesData:[
                { x: 1900, y: 4 }, { x: 1920, y: 3.0 }, { x: 1940, y: 3.8 },
                { x: 1960, y: 3.4 }, { x: 1980, y: 3.2 }, { x: 2000, y: 3.9 }
            ],
            border:{width:2, color:'Red'},
            title: "Average Sales Comparison"
        };
    },
    provide: {
        chart: [AreaSeries]
    },

## Spline Range Area in Vue Chart Component

### *Spline Range Area*

The Spline Range Area Chart is used to display continuous data points as a set of splines that vary between high and low values over intervals of time and across different categories.

To render a spline range area series, use series [type](#) as `SplineRangeArea` and inject `SplineRangeAreaSeries` into the `provide`.

### **APP.VUE**

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'

#### Series customization

The following properties can be used to customize the **stacked column** series.

- [fill](#) – Specifies the color of the series.
- [opacity](#) – Specifies the opacity of [fill](#).
- [dashArray](#) – Specifies the dashes of series.
- [border](#) – Specifies the [color](#) and [width](#) of series border.

#### APP.VUE

```

## Polar in Vue Chart Component

### [Polar Chart](#)

To render a polar series, use series [type](#) as **Polar** and inject **PolarSeries** into the **provide**.

### [Draw Types](#)

Polar drawType property is used to change the series plotting type to line, column, area, range column, spline,

scatter, stacking area and stacking column. The default value of drawType is **Line**.

### [Line](#)

To render a line draw type, use series [drawType](#) as **Line** and inject

**LineSeries** inject **LineSeries** into the **provide**.

[isClosed](#) property specifies whether to join start and end point of

a line series used in polar chart to form a closed path. Default value of isClosed is true.

## **APP.VUE**

```

<template>
  <div id="app">

## Candle in Vue Chart Component

### Candle

Candle series are similar to Hilo Open Close series, are used to represent the low, high, open and closing price over time. To render a candle series, use series [type](#) as `Candle` and inject `CandleSeries` into the `provide`.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Candle' xName='x'
high='high' low='low'
open='open' close='close' name='SHIRPUR-G'> </e-series>

```

```

        </e-series-collection>
    </ejs-chart>
</div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, CandleSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
    data() {
        return {
            seriesData: [
                { x: 'Jan', open: 120, high: 160, low: 100, close: 140 },
                { x: 'Feb', open: 150, high: 190, low: 130, close: 170 },
                { x: 'Mar', open: 130, high: 170, low: 110, close: 150 },
                { x: 'Apr', open: 160, high: 180, low: 120, close: 140 },
                { x: 'May', open: 150, high: 170, low: 110, close: 130 }
            ],
            primaryXAxis: {

```

{% previewsample "page.domainurl/code-snippet/chart/series/candle-cs1" %}

### Hollow Candles

Candle charts allow to visually compare the current price with previous price by customizing the appearance.

Candles are filled/left as hollow based on the following criteria.

<!-- markdownlint-disable MD033 -->

States	Description
Filled	candle sticks are filled when the close value is lesser than the open value
Unfilled	candle sticks are unfilled when the close value is greater than the open value

The color of the candle will be defined by comparing with previous values.

Bear color will be applied when the current closing value is greater than the previous closing value.

Bull color will be applied when the current closing value is less than the previous closing value.

By default, bullFillColor is set as red and bearFillColor is set as green.

#### *Solid Candles*

[enableSolidCandles](#) is used to enable/disable the solid

candles. By default is set to be false. The fill color of the candle will be defined by its opening and closing values.

[bearFillColor](#) will be applied when the opening value is less than the closing value.

[bullFillColor](#) will be applied when the opening value is greater than closing value.

### Box plot

You can change the rendering mode of the Box and Whisker series using the `boxPlotMode` property. The default `boxPlotMode` is `exclusive`. The other `boxPlotMode` available are `inclusive` and `normal`.

To render a box and whisker chart, use `seriesType` as `BoxAndWhisker` and inject `BoxAndWhiskerSeries` into the `provide`. The field `y` requires n number of data or it should contains minimum of five values to plot a segment.

### APP.VUE

## Waterfall in Vue Chart Component

### Waterfall

Waterfall chart helps to understand the cumulative effect of the sequentially introduced positive and negative values. To render a Waterfall series, use series [type](#) as `Waterfall` and inject `WaterfallSeries` into the `provide`. [intermediateSumIndexes](#) property of waterfall is used to represent the cumulative sum values.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Waterfall'
xName='x' yName='y' name='Male'
          :intermediateSumIndexes:='intermediate' :sumIndexes='sum'>
        </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, WaterfallSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Income', y: 4711 }, { x: 'Sales', y: -1015 },
        { x: 'Development', y: -688 },
        { x: 'Revenue', y: 1030 }, { x: 'Balance' },
        { x: 'Administrative', y: -780 },
        { x: 'Expense', y: -361 }, { x: 'Tax', y: -695 },
        { x: 'Net Profit' }
      ],
      primaryXAxis: {
        valueType: 'Category'
      },
      sum: [7],
      intermediate: [4]
      title: "Company Revenue and Profit"
    };
  },
}
```

```

    provide: {

## Error Bar in Vue Chart Component

### Error bar

Error bars are graphical representations of the variability of data and used on graphs to indicate the error or uncertainty in a reported measurement. To render the error bar for the series, set [visible](#) as `true` in error bar object and inject `ErrorBar` module into the `provide`.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='x'
yName='y' name='India' width=2 :marker='marker' :errorBar='errorBar'> </e-
series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, Category, ErrorBar } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 2006, y: 7.8 }, { x: 2007, y: 7.2 },
        { x: 2008, y: 6.8 }, { x: 2009, y: 10.7 },
        { x: 2010, y: 10.8 }, { x: 2011, y: 9.8 }
      ],
      primaryXAxis: {
        minimum: 2005, maximum: 2012, interval: 1,
        title: 'Year'
      },
      errorBar: {
        visible: true
      },
      marker: {
        visible: true
      },
      title: "Olympic Medals"
    };
  },
  provide: {
    chart: [LineSeries, Category, ErrorBar]
  }
};
</script>
<style>
#container {
  height: 350px;
```

```
}
</style>
```

{% previewsample "page.domainurl/code-snippet/chart/series/errorbar-cs1" %}

### Error bar type

To change the error bar rendering type using [type](#) option of error bar. To change the error bar line length you can use [verticalError](#) property.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='x'
yName='y' name='India' width=2 :marker='marker' :errorBar='errorBar'> </e-
series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, Category, ErrorBar } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 2006, y: 7.8 }, { x: 2007, y: 7.2 },
        { x: 2008, y: 6.8 }, { x: 2009, y: 10.7 },
        { x: 2010, y: 10.8 }, { x: 2011, y: 9.8 }
      ],
      primaryXAxis: {
        minimum: 2005, maximum: 2012, interval: 1,
        title: 'Year'
      },
      errorBar: {
        visible: true, type: 'Percentage', verticalError:4
      },
      marker: {
        visible: true
      },
      title: "Olympic Medals"
    };
  },
  provide: {
    chart: [LineSeries, Category, ErrorBar]
  }
};
</script>
<style>
#container {
```

```

    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/errorbar-cs2" %}

### Error bar type

To customize the error bar type, set error bar [type](#) as **Custom** and then change the horizontal/vertical positive and negative error of error bar.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
    :primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='x'
        yName='y' name='India' width=2 :marker='marker' :errorBar='errorBar'> </e-
        series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, Category, ErrorBar } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 2006, y: 7.8 }, { x: 2007, y: 7.2 },
        { x: 2008, y: 6.8 }, { x: 2009, y: 10.7 },
        { x: 2010, y: 10.8 }, { x: 2011, y: 9.8 }
      ],
      primaryXAxis: {
        minimum: 2005, maximum: 2012, interval: 1,
        title: 'Year'
      },
      errorBar: {
        visible: true, type: 'Custom',
        mode: 'Both'
        verticalPostiveError:3,
        horizontalPositiveError:2,
        verticalNegativeError:3,
        horizontalNegativeError:2
      },
      marker: {
        visible: true
      },
      title: "Olympic Medals"
    };
  },
  provide: {

```

```

    chart: [LineSeries, Category, ErrorBar]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/errorbar-cs3" %}

### Error bar mode

Error bar mode is used to define whether the error bar line has to be drawn horizontally, vertically or in both side. To change the error bar mode use [mode](#) option.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='x'
yName='y' name='India' width=2 :marker='marker' :errorBar='errorBar'> </e-
series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, Category, ErrorBar } from

Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 2006, y: 7.8 }, { x: 2007, y: 7.2 },
        { x: 2008, y: 6.8 }, { x: 2009, y: 10.7 },
        { x: 2010, y: 10.8 }, { x: 2011, y: 9.8 }
      ],
      primaryXAxis: {
        minimum: 2005, maximum: 2012, interval: 1,
        title: 'Year'
      },
      errorBar: {
        visible: true, mode: 'Horizontal'
      },
      marker: {
        visible: true
      },
      title: "Olympic Medals"
    };
  },
},

```

```

    provide: {
      chart: [LineSeries, Category, ErrorBar]
    }
  };
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/errorbar-cs4" %}

#### Error bar direction

To change the error bar direction to plus, minus or both side using [direction](#) option.

#### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
    :primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='x'
        yName='y' name='India' width=2 :marker='marker' :errorBar='errorBar'> </e-
        series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, Category, ErrorBar } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 2006, y: 7.8 }, { x: 2007, y: 7.2 },
        { x: 2008, y: 6.8 }, { x: 2009, y: 10.7 },
        { x: 2010, y: 10.8 }, { x: 2011, y: 9.8 }
      ],
      primaryXAxis: {
        minimum: 2005, maximum: 2012, interval: 1,
        title: 'Year'
      },
      errorBar: {
        visible: true, mode:'Vertical', direction:'Minus'
      },
      marker: {
        visible: true
      },
      title: "Olympic Medals"
    };
  },
},

```

```

    provide: {
      chart: [LineSeries, Category, ErrorBar]
    }
  };
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/errorbar-cs5" %}

### *Customizing error bar cap*

To customize the error bar cap length, width and fill color, you can use [errorBarCap](#) option.

### **APP.VUE**

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='x'
yName='y' name='India' width=2 :marker='marker' :errorBar='errorBar'> </e-
series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, Category, ErrorBar } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 2006, y: 7.8 }, { x: 2007, y: 7.2 },
        { x: 2008, y: 6.8 }, { x: 2009, y: 10.7 },
        { x: 2010, y: 10.8 }, { x: 2011, y: 9.8 }
      ],
      primaryXAxis: {
        minimum: 2005, maximum: 2012, interval: 1,
        title: 'Year'
      },
      errorBar: { visible: true, errorBarCap:{ length:10, width:10,
color:'#0000ff' } },
      marker: {
        visible: true
      },
      title: "Olympic Medals"
    };
  },
  provide: {

```

```

    chart: [LineSeries, Category, ErrorBar]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/errorbar-cs6" %}

#### Customizing Error Bar Color

To customize the error bar color for individual errors, use the [errorBarColorMapping](#) property. You can also customize the vertical error, horizontal error, horizontal negative and positive error and vertical negative and positive error for an individual point using [verticalError](#), [horizontalError](#), [horizontalNegativeError](#), [horizontalPositiveError](#), [verticalNegativeError](#) and [verticalPositiveError](#) properties.

#### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'

## Vertical in Vue Chart Component

### Vertical Chart

In EJ2 chart, you can draw a chart in vertical manner by changing orientation of the axis. All series types support this feature. You can use `isTransposed` property in chart to render a chart in vertical manner.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'
isTransposed='true'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Spline' xName='x'
yName='y' name='London'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, SplineSeries, Category, ScatterSeries } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[
        { x: 'Jan', y: -1 }, { x: 'Feb', y: -1 }, { x: 'Mar', y: 2 },
        { x: 'Apr', y: 8 }, { x: 'May', y: 13 }, { x: 'Jun', y: 18 },
        { x: 'Jul', y: 21 }, { x: 'Aug', y: 20 }, { x: 'Sep', y: 16 },
        { x: 'Oct', y: 10 }, { x: 'Nov', y: 4 }, { x: 'Dec', y: 0 }
      ]
    }
  }
}

```

```

    ],
    primaryXAxis: {
      valueType: 'Category'
    },
    primaryYAxis: {
      minimum: -5, maximum: 35, interval: 10,
      title: 'Temperature in Celsius',
      labelFormat: '{value}C'
    },
    title: "Climate Graph-2012"
  };
},
provide: {
  chart: [SplineSeries, Category, ScatterSeries]
}
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/line-cs9" %}

## Pareto in Vue Chart Component

### [Pareto chart](#)

Pareto charts are used to find the cumulative values of data in different categories. It is a combination of Column and Line series. The initial values are represented by column chart and the cumulative values are represented by Line chart. To render a pareto chart, use series [type](#) as **Pareto** and inject **ParetoSeries** **ColumnSeries** and **LineSeries** module.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container":title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Pareto' xName='x'
yName='y' name='Defect' width='2'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";

```

```

import {ChartPlugin, LineSeries, StackingColumnSeries, Tooltip,
ColumnSeries, Category, Legend, ParetoSeries} from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data: function() {
    return {
      seriesData: [
        { x: 'Traffic', y: 56 }, { x: 'Child Care', y: 44.8 },
        { x: 'Transport', y: 27.2 }, { x: 'Weather', y: 19.6 },
        { x: 'Emergency', y: 6.6 }
      ],
      primaryXAxis: {
        valueType: 'Category',
        title: 'Defects'
      },
      primaryYAxis: {
        title: 'Frequency',
        minimum: 0,
        maximum: 150,
        interval: 30,
      },
      title: 'Defect vs Frequency',
      tooltip: {
        enable: true,
        shared: true
      }
    };
  },
  provide: {
    chart: [StackingColumnSeries, LineSeries, Category, ColumnSeries,
Legend, Tooltip, ParetoSeries]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/line-cs10" %}

#### *Pareto customization*

The pareto line series can be customized by using the [marker](#), [width](#), [dashArray](#), and [fill](#) properties in the [paretoOptions](#). The secondary axis for the pareto series can be shown or hidden using the [showAxis](#) property.

#### **APP.VUE**

```

<template>
  <div id="app">
    <ejs-chart id="container":title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'
:legendSettings='legendSettings' :tooltip='tooltip' :chartArea='chartArea'>

```

```

        <e-series-collection>
            <e-series :dataSource='seriesData' type='Pareto' xName='x'
yName='y' name='Defect' width='2' opacity= 0.75 columnWidth= 0.4
                :paretoOptions='paretoOptions'

## Chart series in Vue Chart component

### Multiple Series

You can add multiple series to the chart by using [series](#) property.

The series are rendered in the order as it is added to the series array.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
    :primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
        xName='country' yName='gold' name='Gold'> </e-series>
        <e-series :dataSource='seriesData' type='Column'
        xName='country' yName='silver' name='Silver'> </e-series>
        <e-series :dataSource='seriesData' type='Column'
        xName='country' yName='bronze' name='Bronze'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category } from "@syncfusion/ej2-vue-
charts";

```

```

Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50, silver: 70, bronze: 45 },
        { country: "China", gold: 40, silver: 60, bronze: 55 },
        { country: "Japan", gold: 70, silver: 60, bronze: 50 },
        { country: "Australia", gold: 60, silver: 56, bronze: 40 },
        { country: "France", gold: 50, silver: 45, bronze: 35 },
        { country: "Germany", gold: 40, silver: 30, bronze: 22 },
        { country: "Italy", gold: 40, silver: 35, bronze: 37 },
        { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
      ],
      primaryXAxis: {
        valueType: 'Category',
        title: 'Countries'
      },
      animation: { enable: false },
      title: "Olympic Medals"
    };
  },
  provide: {
    chart: [ColumnSeries, Category]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs27" %}

### Combination Series

Combination of different types like Line, column etc, can be rendered in a chart.

Bar series cannot be combined with any other series as the axis orientation is different from other series.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'

### Enable Complex Property in Series

By setting `enableComplexProperty` value as `true` in series you can bind complex data to the chart.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
xName='group.x' yName='group.y' name='USA' enableComplexProperty="true">
      </e-series>
        <e-series :dataSource='seriesData' type='Column'
xName='group.x' yName='y' name='UK' enableComplexProperty="true"> </e-
series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, LineSeries, Category } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[
        {group: { x: 'Aaa', y: 10}, y: 20},
        {group: { x: 'Baa', y: 30}, y: 10}
      ],
      primaryXAxis: {
        valueType: 'Category'
      },
      marker: { visible: true, width: 10, opacity: 0.6, height: 10 },
      title: "Annual Growth GDP in France"
    };
  },
  provide: {
    chart: [ColumnSeries, LineSeries, Category]
  },
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/combination-cs2" %}

### Technical indicators in Vue Chart component

A technical indicator is a mathematical calculation based on historic price, volume or open interest information that aims to forecast financial market direction.

Chart supports 10 types of technical indicators.

#### Accumulation Distribution

Accumulation Distribution combines price and volume to show how money may be flowing into or out of stock.

To render an Accumulation Distribution Indicator, use indicator `type` as `AccumulationDistribution` and inject `AccumulationDistributionIndicator` into the `provide`.

To calculate the signal line `volume` field is additionally added with `dataSource`.

### APP.VUE

### Average True Range (ATR)

ATR measures the stock volatility by comparing the current value with the previous value. To render a Average True Range (ATR) Indicator, use indicator [type](#) as `Atr` and inject `AtrIndicator` into the `provide`.

### Bollinger Band

A chart overlay that shows the upper and lower limits of normal price movements based on the standard deviation of prices. To render a Bollinger Band, use indicator [type](#) as `BollingerBand` and inject `BollingerBands` into the `provide`. Bollinger band will be represented by three lines (upperLine, lowerLine, signalLine). Bollinger Band default values of the [period](#) is 14 and [standardDeviations](#) is 2.

### Exponential Moving Average (EMA)

Moving average Indicators are used to define the direction of the trend. To render a EMA Indicator, use indicator [type](#) as `Ema` and inject `EMAIndicator` into the `provide`.

### Momentum

Momentum shows the speed at which the price of the stock is changing. To render a Momentum indicator, use indicator `type` as `Momentum` and inject `MomentumIndicator` into the `provide`. Momentum indicator will be represented by two lines (upperLine, signalLine). In momentum indicator the upperBand value is always render at the value 100.

- Customization of MomentumIndicator

stroke, stroke-width, and color of upperLine can be customized by using [upperLine](#), property of indicator.

### Moving Average Convergence Divergence (MACD)

MACD is based on the difference between two EMA's. To render a MACD Indicator, use indicator [type](#) as **MACD** and inject **MACDIndicator** into the **provide**. MACD indicator will be represented by MACD line, signal line, MACD histogram. MACD histogram is used to differentiate MACD line and signal line.

- Customization of MACD

`stroke`, `stroke-width`, and `color` of `macdLine` can be customized by using `macdLine` property of indicator. The positive and negative changes of histogram can be customized by `macdPositiveColor` and `macdNegativeColor` properties. The `macdType` is used to define the type of MACD indicator. To customize the MACD period using `slowPeriod` and `fastPeriod` properties.

### Relative Strength Index (RSI)

RSI shows how strongly a stock is moving in its current direction. To render a RSI Indicator, use

indicator `type` as `Rsi` and inject `RsiIndicator` into the `.provide`. RSI indicator will be represented by three lines (upperBand, lowerBand, signalLine). The upperBand and lowerBand values are customized by `overBought` and `overSold` properties of indicator and the signalLine is calculated by RSI formula.

### Simple Moving Average (SMA)

Moving average Indicators are used to define the direction of the trend. To render a SMA Indicator, use indicator [type](#) as `Sma` and inject `SmaIndicator` module using `provide`.

### Stochastic

It shows how a stock is, when compared to previous state. To render a Stochastic indicator, use indicator [type](#) as Stochastic and inject StochasticIndicator module using provide method. stochastic indicator will be represented by four lines (upperLine, lowerLine, periodLine, signalLine). In stochastic indicator the upperBand value and lowerBand value is customized by [overBought](#) and [overBought](#) properties of indicators and the periodLine and

signalLine is render based on stochastic formula.

- Customization of StochasticIndicator

stroke, stroke-width, and color of upperLine can be customized by using [upperLine](#), the lowerLine can be customized by using [lowerLine](#) and the periodLine can be customized by using [periodLine](#) properties of indicator. To customize the period to find the properties.

### Trend lines in Vue Chart component

Trendlines are used to show the direction and speed of price.

Trendlines can be generated for Cartesian type series (Line, Column, Scatter, Area, Candle, Hilo etc.)

except bar type series. You can add more than one trendline to a series.

Chart supports 6 types of trendlines.

#### Linear

A linear trendline is a best fit straight line that is used with simpler data sets. To render a linear trendline, use trendline [type](#) as `Linear` and inject `TrendLines` module using `provide`.

#### APP.VUE

```

### Exponential

An exponential trendline is a curved line that is most useful when data values rise or fall at increasingly higher rates. You cannot create an exponential trendline, if your data contains zero or negative values.

To render a exponential trendline, use trendline [type](#) as **Exponential** and inject **TrendLines** module using **provide**.

### Logarithmic

A logarithmic trendline is a best-fit curved line that is most useful when the rate of change in the data increases or decreases quickly and then levels out.

A logarithmic trendline can use negative and/or positive values.

To render a logarithmic trendline, use trendline [type](#) as `Logarithmic` and inject `TrendLines` module using `provide`.

### Forecasting

Trendlines forecasting is the prediction of future/past situations.

Forecasting can be classified into two types as follows

## Forward Forecasting

## Backward Forecasting

- Forward Forecasting

The value set for forwardForecast is used to determine the distance moving towards the future trend.

**APP.VUE**

## Data markers in Vue Chart component

Data markers are used to provide information about the data points in the series. You can add a shape to adorn

each data point.

<!-- markdownlint-disable MD036 -->

### Marker

<!-- markdownlint-disable MD036 -->

Markers can be added to points by enabling the [visible](#) option of the marker property. By default, distinct markers will be enabled for each series in the chart.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
    :primaryXAxis='primaryXAxis'>
      <e-series-collection>

```

```

        <e-series :dataSource='seriesData' type='Line' xName='x'
yName='y' name='December 2007'
        :marker='marker'> </e-series>
        <e-series :dataSource='seriesData' type='Line' xName='x'
yName='y1' name='December 2008'
        :marker='marker'> </e-series>
    </e-series-collection>
</ejs-chart>
</div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
    data() {
        return {
            seriesData: [
                { x: 'WW', y: 12, y1: 22, y2: 38.3, y3: 50 },
                { x: 'EU', y: 9.9, y1: 26, y2: 45.2, y3: 63.6 },
                { x: 'APAC', y: 4.4, y1: 9.3, y2: 18.2, y3: 20.9 },
                { x: 'LATAM', y: 6.4, y1: 28, y2: 46.7, y3: 65.1 },
                { x: 'MEA', y: 30, y1: 45.7, y2: 61.5, y3: 73 },
                { x: 'NA', y: 25.3, y1: 35.9, y2: 64, y3: 81.4 }
            ],
            primaryXAxis: {
                valueType: 'Category', interval: 1
            },
            marker: {
                visible: true,
            },
            title: "FB Penetration of Internet Audience"
        };
    },
    provide: {
        chart: [LineSeries, Category]
    }
};
</script>
<style>
    #container {
        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/data-marker/marker-cs2" %}

### Shape

Markers can be assigned with different shapes such as Rectangle, Circle, Diamond, etc. using the [shape](#) property.

### APP.VUE

```

<template>
    <div id="app">

```

```

        <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
            <e-series-collection>
                <e-series :dataSource='seriesData' type='Line' xName='x'
yName='y' name='December 2007'
                :marker='marker'> </e-series>
            </e-series-collection>
        </ejs-chart>
    </div>
</template>

import Vue from "vue";
import { ChartPlugin, LineSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
    data() {
        return {
            seriesData: [
                { x: 'WW', y: 12, y1: 22, y2: 38.3, y3: 50 },
                { x: 'EU', y: 9.9, y1: 26, y2: 45.2, y3: 63.6 },
                { x: 'APAC', y: 4.4, y1: 9.3, y2: 18.2, y3: 20.9 },
                { x: 'LATAM', y: 6.4, y1: 28, y2: 46.7, y3: 65.1 },
                { x: 'MEA', y: 30, y1: 45.7, y2: 61.5, y3: 73 },
                { x: 'NA', y: 25.3, y1: 35.9, y2: 64, y3: 81.4 }
            ],
            primaryXAxis: {
                valueType: 'Category', interval: 1
            },
            marker: {
                visible: true, width: 10, height: 10, shape: 'Diamond'
            },
            title: "FB Penetration of Internet Audience"
        };
    },
    provide: {
        chart: [LineSeries, Category]
    }
};
</script>
<style>
    #container {
        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/data-marker/marker-cs3" %}

Note : To know more about the marker shape type refer the [shape](#).

### Images

Apart from the shapes, you can also add custom images to mark the data point using the

[imageUrl](#) property.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='x'
yName='y' name='December 2007'
          :marker='marker'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'WW', y: 12, y1: 22, y2: 38.3, y3: 50 },
        { x: 'EU', y: 9.9, y1: 26, y2: 45.2, y3: 63.6 },
        { x: 'APAC', y: 4.4, y1: 9.3, y2: 18.2, y3: 20.9 },
        { x: 'LATAM', y: 6.4, y1: 28, y2: 46.7, y3: 65.1 },
        { x: 'MEA', y: 30, y1: 45.7, y2: 61.5, y3: 73 },
        { x: 'NA', y: 25.3, y1: 35.9, y2: 64, y3: 81.4 }
      ],
      primaryXAxis: {
        valueType: 'Category', interval: 1
      },
      marker: {
        visible: true,
        width: 10, height: 10, shape: 'Image',
        imageUrl: './sun_annotation.png'
      },
      title: "FB Penetration of Internet Audience"
    };
  },
  provide: {
    chart: [LineSeries, Category]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/data-marker/marker-cs4" %}

### Customization

Marker's color and border can be customized using `fill` and `border` properties.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='x'
yName='y' name='December 2007'
          :marker='marker'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'WW', y: 12, y1: 22, y2: 38.3, y3: 50 },
        { x: 'EU', y: 9.9, y1: 26, y2: 45.2, y3: 63.6 },
        { x: 'APAC', y: 4.4, y1: 9.3, y2: 18.2, y3: 20.9 },
        { x: 'LATAM', y: 6.4, y1: 28, y2: 46.7, y3: 65.1 },
        { x: 'MEA', y: 30, y1: 45.7, y2: 61.5, y3: 73 },
        { x: 'NA', y: 25.3, y1: 35.9, y2: 64, y3: 81.4 }
      ],
      primaryXAxis: {
        valueType: 'Category', interval: 1
      },
      marker: { visible: true, fill: 'Red', height: 10, width: 10,
        border:{width: 2, color: 'blue'} },
      title: "FB Penetration of Internet Audience"
    };
  },
  provide: {
    chart: [LineSeries, Category]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/data-marker/marker-cs5" %}

### Customizing specific point

You can also customize the specific marker and label using [pointRender](#) event. The `pointRender` event allows you to change the shape, color and border for a point.

### APP.VUE

```

<template>

```

```

<div id="app">
  <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :pointRender='pointRender'>
    <e-series-collection>
      <e-series :dataSource='seriesData' type='Line' xName='x'
yName='y' name='December 2007'
      :marker='marker'> </e-series>
    </e-series-collection>
  </ejs-chart>
</div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'WW', y: 12, y1: 22, y2: 38.3, y3: 50 },
        { x: 'EU', y: 9.9, y1: 26, y2: 45.2, y3: 63.6 },
        { x: 'APAC', y: 4.4, y1: 9.3, y2: 18.2, y3: 20.9 },
        { x: 'LATAM', y: 6.4, y1: 28, y2: 46.7, y3: 65.1 },
        { x: 'MEA', y: 30, y1: 45.7, y2: 61.5, y3: 73 },
        { x: 'NA', y: 25.3, y1: 35.9, y2: 64, y3: 81.4 }
      ],
      primaryXAxis: {
        valueType: 'Category', interval: 1
      },
      marker: { visible: true, height: 10, width: 10 },
      title: "FB Penetration of Internet Audience"
    };
  },
  provide: {
    chart: [LineSeries, Category]
  },
  methods: {
    pointRender: function(args) {
      if(args.point.index === 3) {
        args.fill = 'red'
      }
    }
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/data-marker/marker-cs6" %}

Fill marker with series color

Marker can be filled with the series color by setting the [isFilled](#) property to **<b>true</b>**.

**APP.VUE**

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :pointRender='pointRender'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Line' xName='x'
yName='y' name='December 2007'
          :marker='marker'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, Category } from "@syncfusion/ej2-vue-
charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'WW', y: 12, y1: 22, y2: 38.3, y3: 50 },
        { x: 'EU', y: 9.9, y1: 26, y2: 45.2, y3: 63.6 },
        { x: 'APAC', y: 4.4, y1: 9.3, y2: 18.2, y3: 20.9 },
        { x: 'LATAM', y: 6.4, y1: 28, y2: 46.7, y3: 65.1 },
        { x: 'MEA', y: 30, y1: 45.7, y2: 61.5, y3: 73 },
        { x: 'NA', y: 25.3, y1: 35.9, y2: 64, y3: 81.4 }
      ],
      primaryXAxis: {
        valueType: 'Category', interval: 1
      },
      marker: { visible: true, height: 10, width: 10, isFilled: true},
      title: "FB Penetration of Internet Audience"
    };
  },
  provide: {
    chart: [LineSeries, Category]
  },
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/data-marker/marker-cs7" %}

### Data labels in Vue Chart component

Data label can be added to a chart series by enabling the [visible](#)

option in the dataLabel. By default, the labels will arrange smartly without overlapping.

**APP.VUE**

```

<template>
  <div id="app">
    <ejs-chart id= "container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column' xName='x'
yName='y' name='Warmest' :marker='marker'></e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category, DataLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: -7.1 }, { x: 'Feb', y: -3.7 },
        { x: 'Mar', y: 2 }, { x: 'Apr', y: 6.3 },
        { x: 'May', y: 13.3 }, { x: 'Jun', y: 18.0 },
        { x: 'Jul', y: 19.8 }, { x: 'Aug', y: 18.1 },
        { x: 'Sep', y: 13.1 }, { x: 'Oct', y: 4.1 },
        { x: 'Nov', y: -3.8 }, { x: 'Dec', y: -6.8 }
      ],
      primaryXAxis: {
        valueType: 'Category'
      },
      marker: {
        //Data label for chart series
        dataLabel: { visible: true }
      },
      title: "Alaska Weather Statistics - 2016"
    };
  },
  provide: {
    chart: [ColumnSeries, Category, DataLabel]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/data-marker/datalabel-cs1" %}

Note: To use datalabel feature, we need to inject **DataLabel** into the **provide**.

#### Position

Using [position](#) property, you can place the label either on

**Top**, **Middle**, **Bottom** or **Outer** (outer is applicable for column and bar type series).

**APP.VUE**

```

<template>
  <div id="app">
    <ejs-chart id= "container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column' xName='x'
yName='y' name='Warmest' :marker='marker'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category, DataLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: -7.1 }, { x: 'Feb', y: -3.7 },
        { x: 'Mar', y: 2 }, { x: 'Apr', y: 6.3 },
        { x: 'May', y: 13.3 }, { x: 'Jun', y: 18.0 },
        { x: 'Jul', y: 19.8 }, { x: 'Aug', y: 18.1 },
        { x: 'Sep', y: 13.1 }, { x: 'Oct', y: 4.1 },
        { x: 'Nov', y: -3.8 }, { x: 'Dec', y: -6.8 }
      ],
      primaryXAxis: {
        valueType: 'Category'
      },
      marker: {
        dataLabel: { visible: true, position: 'Middle' }
      },
      title: "Alaska Weather Statistics - 2016"
    };
  },
  provide: {
    chart: [ColumnSeries, Category, DataLabel]
  }
};
</script>
<style>
#container {
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/data-marker/datalabel-cs2" %}

Note: The position **Outer** is applicable for column and bar type series.

### Data Label Template

Label content can be formatted by using the template option. Inside the template, you can add the placeholder text ``${point.x}`` and ``${point.y}`` to display corresponding data points x & y value. Using [template](#) property, you can set data label template in chart.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id= "container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column' xName='x'
yName='y' name='Warmest' :marker='marker'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category, DataLabel } from
"@syncfusion/ej2-vue-charts";
let contentVue = Vue.component("contentTemplate", {
  template:
`<div><div>{{data.point.x}}</div><div>{{data.point.y}}</div></div>`,
  data() {
    return {
      data: {}
    };
  }
});
let contentTemplate = function() {
  return { template: contentVue };
};
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: -7.1 }, { x: 'Feb', y: -3.7 },
        { x: 'Mar', y: 2 }, { x: 'Apr', y: 6.3 },
        { x: 'May', y: 13.3 }, { x: 'Jun', y: 18.0 },
        { x: 'Jul', y: 19.8 }, { x: 'Aug', y: 18.1 },
        { x: 'Sep', y: 13.1 }, { x: 'Oct', y: 4.1 },
        { x: 'Nov', y: -3.8 }, { x: 'Dec', y: -6.8 }
      ],
      primaryXAxis: {
        valueType: 'Category'
      },
      marker: { dataLabel: { visible: true, position: 'Middle',
        template: contentTemplate } },
      title: "Alaska Weather Statistics - 2016"
    };
  },
  provide: {
    chart: [ColumnSeries, Category, DataLabel]
  }
}
```

```

    }
  };
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/data-marker/datalabel-cs3" %}

### Text Mapping

Text from the data source can be mapped using `name` property.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id= "container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column' xName='x'
yName='y' name='Warmest' :marker='marker'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category, DataLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[{ x: 'Jan', y: 12, text: 'January : 12°C' }, { x: 'Feb',
y: 8, text: 'February : 8°C' },
        { x: 'Mar', y: 11, text: 'March : 11°C' }, { x: 'Apr', y:
6, text: 'April : 6°C' }],
      primaryXAxis: {
        valueType: 'Category'
      },
      marker: { dataLabel: { visible: true, name: 'text' } },
      title: "Alaska Weather Statistics - 2016"
    };
  },
  provide: {
    chart: [ColumnSeries, Category, DataLabel]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/data-marker/datalabel-cs4" %}

### Format

Data label for the chart can be formatted using [format](#) property. You can use the global formatting options, such as 'n', 'p', and 'c'.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id= "container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column' xName='x'
yName='y' name='Warmest' :marker='marker'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category, DataLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[{ x: 'Jan', y: 12, text: 'January : 12°C' }, { x: 'Feb',
y: 8, text: 'February : 8°C' },
        { x: 'Mar', y: 11, text: 'March : 11°C' }, { x: 'Apr', y:
6, text: 'April : 6°C' }],
      primaryXAxis: {
        valueType: 'Category'
      },
      marker: { dataLabel: { visible: true, format: 'n2' } },
      title: "Alaska Weather Statistics - 2016"
    };
  },
  provide: {
    chart: [ColumnSeries, Category, DataLabel]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>
```

{% previewsample "page.domainurl/code-snippet/chart/data-marker/datalabel-cs5" %}

Value	Format	Resultant Value	Description
1000	n1	1000.0	The number is rounded to 1 decimal place.

1000	n2	1000.00	The number is rounded to 2 decimal places.
1000	n3	1000.000	The number is rounded to 3 decimal place.
0.01	p1	1.0%	The number is converted to percentage with 1 decimal place.
0.01	p2	1.00%	The number is converted to percentage with 2 decimal place.
0.01	p3	1.000%	The number is converted to percentage with 3 decimal place.
1000	c1	\$1000.0	The currency symbol is appended to number and number is rounded to 1 decimal place.
1000	c2	\$1000.00	The currency symbol is appended to number and number is rounded to 2 decimal place.

### Margin

**margin** for data label can be applied to using **left**, **right**, **bottom** and **top** properties.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id= "container" :title='title'
:primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column' xName='x'
yName='y' name='Warmest' :marker='marker'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category, DataLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: -7.1 }, { x: 'Feb', y: -3.7 },
        { x: 'Mar', y: 2 }, { x: 'Apr', y: 6.3 },
        { x: 'May', y: 13.3 }, { x: 'Jun', y: 18.0 },
        { x: 'Jul', y: 19.8 }, { x: 'Aug', y: 18.1 },
        { x: 'Sep', y: 13.1 }, { x: 'Oct', y: 4.1 },
        { x: 'Nov', y: -3.8 }, { x: 'Dec', y: -6.8 }
      ],
      primaryXAxis: {
        valueType: 'Category'
      },
      marker: { dataLabel: { visible: true, border:{width: 1, color :
'red'},
                    margin:{
                      left:5,
```

```

        right:5,
        top:5,
        bottom:5
    } }

    },
    title: "Alaska Weather Statistics - 2016"
  };
},
provide: {
  chart: [ColumnSeries, Category, DataLabel]
}
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/data-marker/datalabel-cs6" %}

### DataLabel Rotation

Using `angle` property, you can rotate the data label by its given angle.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id= "container" :title='title'
    :primaryXAxis='primaryXAxis'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column' xName='x'
        yName='y' name='Warmest' :marker='marker'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category, DataLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { x: 'Jan', y: -7.1 }, { x: 'Feb', y: -3.7 },
        { x: 'Mar', y: 2 }, { x: 'Apr', y: 6.3 },
        { x: 'May', y: 13.3 }, { x: 'Jun', y: 18.0 },
        { x: 'Jul', y: 19.8 }, { x: 'Aug', y: 18.1 },
        { x: 'Sep', y: 13.1 }, { x: 'Oct', y: 4.1 },
        { x: 'Nov', y: -3.8 }, { x: 'Dec', y: -6.8 }
      ],
      primaryXAxis: {
        valueType: 'Category'
      },
    },
  },
};

```

```

        marker: { dataLabel: { visible: true, border: { width: 1, color :
'red' },
                    margin: {
                        left: 5,
                        right: 5,
                        top: 5,
                        bottom: 5
                    }, angle: 45, enableRotation: true }
        },
        title: "Alaska Weather Statistics - 2016"
    };
    },
    provide: {
        chart: [ColumnSeries, Category, DataLabel]
    }
};
</script>
<style>
    #container {
        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/data-marker/marker-cs1" %}

### Customization

**stroke** and **border** of data label can be customized using **fill** and **border** properties. Rounded corners can be customized using **rx** and **ry** properties.

### APP.VUE

```

<template>
    <div id="app">
        <ejs-chart id= "container" :title='title'
:primaryXAxis='primaryXAxis'>
            <e-series-collection>
                <e-series :dataSource='seriesData' type='Column' xName='x'
yName='y' name='Warmest' :marker='marker'> </e-series>
            </e-series-collection>
        </ejs-chart>
    </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category, DataLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
    data() {
        return {
            seriesData: [
                { x: 'Jan', y: -7.1 }, { x: 'Feb', y: -3.7 },
                { x: 'Mar', y: 2 }, { x: 'Apr', y: 6.3 },
                { x: 'May', y: 13.3 }, { x: 'Jun', y: 18.0 },
                { x: 'Jul', y: 19.8 }, { x: 'Aug', y: 18.1 },
            ]
        }
    }
}

```

```

        { x: 'Sep', y: 13.1 }, { x: 'Oct', y: 4.1 },
        { x: 'Nov', y: -3.8 }, { x: 'Dec', y: -6.8 }
    ],
    primaryXAxis: {
        valueType: 'Category'
    },
    marker: { dataLabel: { visible: true,
        border: { width: 2, color: 'red' },
        rx: 10, ry: 10
    }
    },
    title: "Alaska Weather Statistics - 2016"
};
},
provide: {
    chart: [ColumnSeries, Category, DataLabel]
}
};
</script>
<style>
#container {
    height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/data-marker/datalabel-cs7" %}

Note: `rx` and `ry` properties requires `border` values not to be null.

### Customizing Specific Point

You can also customize the specific marker and label using [pointRender](#) and [textRender](#) event.

`pointRender` event allows you to change the shape, color and border for a point, whereas the `textRender` event allows you to change the text for the point.

### APP.VUE

```

<template>
    <div id="app">
        <ejs-chart id="container" :title='title'
        :primaryXAxis='primaryXAxis' :pointRender='pointRender'
        :textRender='textRender'>
            <e-series-collection>
                <e-series :dataSource='seriesData' type='Column' xName='x'
                yName='y' name='Warmest' :marker='marker'> </e-series>
            </e-series-collection>
        </ejs-chart>
    </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category, DataLabel } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
    data() {
        return {

```

```

seriesData: [
    { x: 'Jan', y: -7.1 }, { x: 'Feb', y: -3.7 },
    { x: 'Mar', y: 2 }, { x: 'Apr', y: 6.3 },
    { x: 'May', y: 13.3 }, { x: 'Jun', y: 18.0 },
    { x: 'Jul', y: 19.8 }, { x: 'Aug', y: 18.1 },
    { x: 'Sep', y: 13.1 }, { x: 'Oct', y: 4.1 },
    { x: 'Nov', y: -3.8 }, { x: 'Dec', y: -6.8 }
],
primaryXAxis: {
    valueType: 'Category'
},
marker:{ dataLabel: { visible: true } },
title: "Alaska Weather Statistics - 2016"
};
},
provide: {
    chart: [ColumnSeries, Category, DataLabel]
},
methods: {
    pointRender: function(args) {
        if (args.point.index === 6) {
            args.fill = 'red'
        }
    },
    textRender: function(args) {
        if (args.point.index === 6) {
            args.text = 'Maximum Temperature';
            args.color = 'red';
        }
    }
}
};
</script>
<style>
    #container {
        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/data-marker/datalabel-cs8" %}

### Show percentage based on each series points

You can calculate the percentage value based on the sum for each series using the `seriesRender` and `textRender` events in the chart. In `seriesRender` calculate the sum of each series y values and In `textRender` calculate percentage value based on the sum value and modify the text.

### APP.VUE

### Chart annotations in Vue Chart component

Annotations are used to mark the specific area of interest in the chart area with texts, shapes or images.

<!-- markdownlint-disable MD033 -->

You can add annotations to the chart by using the `<code>annotations</code> option. By using the content option of annotation object, you can specify`

the id of the element that needs to be displayed in the chart area.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'
:annotations='annotations'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='gold' name='Gold'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>

      title: "Olympic Medals"
    };
  },
  provide: {
    chart: [ColumnSeries, Category, ChartAnnotation]
  },
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/column-cs2" %}

## Co-ordinate Units

Specified the coordinates units of the annotation either **Pixel** or **Point**.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'
:annotations='annotations'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='gold' name='Gold'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category, ChartAnnotation } from
"@syncfusion/ej2-vue-charts";
let contentVue = Vue.component("contentTemplate", {
  template: '<div style="border: 1px solid black; padding: 5px 5px 5px 5px,
background:#f5f5f5">Annotation in Pixel</div>',
  data() {
    return {
      data: {}
    };
  }
});
let contentTemplate = function() {
  return { template: contentVue };
};
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50 },
        { country: "China", gold: 40 },
        { country: "Japan", gold: 70 },
        { country: "Australia", gold: 60 },
        { country: "France", gold: 50 },
        { country: "Germany", gold: 40 },
        { country: "Italy", gold: 40 },
        { country: "Sweden", gold: 30 }
      ],
      annotations:[{
        content: contentTemplate,
        coordinateUnits: 'Pixel',
        x: 150,
        y: 50
      }],
      primaryXAxis: {
        valueType: 'Category',
        title: 'Countries'
      },
    },
  },
}
```

```

        primaryYAxis:
        {
            minimum: 0, maximum: 80,
            interval: 20, title: 'Medals'
        },
        title: "Olympic Medals"
    };
},
provide: {
    chart: [ColumnSeries, Category, ChartAnnotation]
},

        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/column-cs3" %}

### Alignment

Annotation provides **verticalAlignment** and **horizontalAlignment**. The **verticalAlignment** can be customized

via **Top**, **Bottom** or **Middle** and the **horizontalAlignment** can be customized via **Near**, **Far** or **Center**.

### APP.VUE

```

<template>
    <div id="app">
        <ejs-chart id="container" :title='title'
        :primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'
        :annotations='annotations'>
            <e-series-collection>
                <e-series :dataSource='seriesData' type='Column'
                xName='country' yName='gold' name='Gold'> </e-series>
            </e-series-collection>
        </ejs-chart>
    </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category, ChartAnnotation } from
"@syncfusion/ej2-vue-charts";
let contentVue = Vue.component("contentTemplate", {
    template: '<div style="border: 1px solid black; padding: 5px 5px 5px 5px,
    background:#f5f5f5">Highest Medal Count</div>',
    data() {
        return {
            data: {}
        };
    }
});
let contentTemplate = function() {
    return { template: contentVue };
}

```

```

};
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50 },
        { country: "China", gold: 40 },
        { country: "Japan", gold: 70 },
        { country: "Australia", gold: 60 },
        { country: "France", gold: 50 },
        { country: "Germany", gold: 40 },
        { country: "Italy", gold: 40 },
        { country: "Sweden", gold: 30 }
      ],
      annotations:[{
        content: contentTemplate,
        x: 'France',
        y: 50,
        verticalAlignment:'Top',
        horizontalAlignment:'Near'
      }],
      primaryXAxis: {
        valueType: 'Category',
        title: 'Countries'
      },
      primaryYAxis:
      {
        minimum: 0, maximum: 80,
        interval: 20, title: 'Medals'
      },
      title: "Olympic Medals"
    };
  },
  provide: {
    chart: [ColumnSeries, Category, ChartAnnotation]
  },
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/column-cs4" %}

### Adding y-axis sub title through on annotation

By setting text div in the `content` option of annotation object you can add sub title to chart y-axis. Specified the `coordinate` value as `pixel` and customize x and y location of the text.

### APP.VUE

```

<template>
  <div id="app">

```

```

        <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'
:annotations='annotations'>
            <e-series-collection>
                <e-series :dataSource='seriesData' type='Column'
xName='country' yName='gold' name='Gold'> </e-series>
            </e-series-collection>

                interval: 20, title: '(m2/min)'
            },
            title: "Olympic Medals"
        }
    }
}

```

```

    };
  },
  provide: {
    chart: [ColumnSeries, Category, ChartAnnotation]
  },
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/series/column-cs5" %}

### Legend in Vue Chart component

Legend provides information about the series rendered in the chart which can be customized using legend properties.

#### Position and Alignment

By using the [position](#) property, you can position the legend

at left, right, top or bottom of the chart. The legend is positioned at the bottom of the chart, by default.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :legendSettings='legendSettings'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='gold' name='Gold'> </e-series>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='silver' name='Silver'> </e-series>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='bronze' name='Bronze'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category, Legend } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50, silver: 70, bronze: 45 },
        { country: "China", gold: 40, silver: 60, bronze: 55 },
        { country: "Japan", gold: 70, silver: 60, bronze: 50 },
        { country: "Australia", gold: 60, silver: 56, bronze: 40 },
        { country: "France", gold: 50, silver: 45, bronze: 35 },
        { country: "Germany", gold: 40, silver: 30, bronze: 22 },

```

```

        { country: "Italy", gold: 40, silver: 35, bronze: 37 },
        { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
    ],
    primaryXAxis: {
        valueType: 'Category',
        title: 'Countries'
    },
    legendSettings: {
        visible: true,
        position: 'Top'
    },
    title: "Olympic Medals"
};
},
provide: {
    chart: [ColumnSeries, Category, Legend ]
}
};
</script>
<style>
    #container {
        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs31" %}

- Custom position helps you to position the legend anywhere in the chart using x, y coordinates.

### APP.VUE

```

<template>
    <div id="app">
        <ejs-chart id="container" :title='title'
        :primaryXAxis='primaryXAxis' :legendSettings='legendSettings'>
            <e-series-collection>
                <e-series :dataSource='seriesData' type='Column'
                xName='country' yName='gold' name='Gold'> </e-series>

Set the label color based on series color

You can set the legend label color based on series color by using chart's [loaded](#) event.

#### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart :title='title' :primaryXAxis='primaryXAxis'
:legendSettings='legendSettings' :loaded='onChartLoaded'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='gold' name='Gold'> </e-series>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='silver' name='Silver'> </e-series>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='bronze' name='Bronze'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category, Legend } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
// declare the series colors
let colors = ['#00BDAE', '#404041', '#357CD2'];
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50, silver: 70, bronze: 45 },
        { country: "China", gold: 40, silver: 60, bronze: 55 },
        { country: "Japan", gold: 70, silver: 60, bronze: 50 },
        { country: "Australia", gold: 60, silver: 56, bronze: 40 },
        { country: "France", gold: 50, silver: 45, bronze: 35 },
        { country: "Germany", gold: 40, silver: 30, bronze: 22 },
        { country: "Italy", gold: 40, silver: 35, bronze: 37 },
        { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
      ],
      primaryXAxis: {
        valueType: 'Category',
        title: 'Countries'
      },
      legendSettings: {

}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs39" %}

### Collapsing Legend Item

By default, series name will be displayed as legend. To skip the legend for a particular series, you can give empty string to the series name.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
    :primaryXAxis='primaryXAxis' :legendSettings='legendSettings'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
        xName='country' yName='gold' name='Gold' legendShape='Circle'> </e-series>
        <e-series :dataSource='seriesData' type='Column'
        xName='country' yName='silver' name='Silver' legendShape='Circle'> </e-
        series>
        <e-series :dataSource='seriesData' type='Column'
        xName='country' yName='bronze' name='Bronze' legendShape='Circle'> </e-
        series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category, Legend } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50, silver: 70, bronze: 45 },
        { country: "China", gold: 40, silver: 60, bronze: 55 },

```

```

        { country: "Japan", gold: 70, silver: 60, bronze: 50 },
        { country: "Australia", gold: 60, silver: 56, bronze: 40 },
        { country: "France", gold: 50, silver: 45, bronze: 35 },
        { country: "Germany", gold: 40, silver: 30, bronze: 22 },
        { country: "Italy", gold: 40, silver: 35, bronze: 37 },
        { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
    ],
    primaryXAxis: {
        valueType: 'Category',
        title: 'Countries'
    },
    legendSettings: {
        visible: true, toggleVisibility: true
    },
    title: "Olympic Medals"
};
},
provide: {
    chart: [ColumnSeries, Category, Legend ]
}

</script>
<style>
    #container {
        height: 350px;
    }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs40" %}

### Legend Title

You can set title for legend using `title` property in `legendSettings`. You can also customize the `fontStyle`, `size`, `fontWeight`, `color`, `textAlignment`, `fontFamily`, `opacity` and `textOverflow` of legend title. `titlePosition` is used to set the legend position in `Top`, `Left` and `Right` position. `maximumTitleWidth` is used to set the width of the legend title. By default, it will be `100px`.

### APP.VUE

```

<template>
    <div id="app">
        <ejs-chart id="container" :title='title'
        :primaryXAxis='primaryXAxis' :legendSettings='legendSettings'>
            <e-series-collection>

{% previewsample "page.domainurl/code-snippet/chart/axis/category-cs42" %}

Note: To use legend feature, we need to inject **Legend** into the **Provide**.

### Tooltip in Vue Chart component

<!-- markdownlint-disable MD036 -->

Chart will display details about the points through tooltip, when the mouse is moved over the point.

#### Default tooltip

By default, tooltip is not visible. You can enable the tooltip by setting [enable](#) property to **true** and by injecting **Tooltip** into the **provide**.

#### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
    :primaryXAxis='primaryXAxis' :tooltip='tooltip'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='StepLine' xName='x'

</script>
<style>
  #container{
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/user-interaction/tooltip-cs7" %}

### Format the tooltip

<!-- markdownlint-disable MD013 -->

By default, tooltip shows information of x and y value in points. In addition to that, you can show more information in tooltip. For example the format `${series.name} ${point.x}` shows series name and point x value.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
    :primaryXAxis='primaryXAxis' :tooltip='tooltip'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='StepLine' xName='x'
        yName='y' name='China' :marker='marker'> </e-series>
      </e-series-collection>
    </div>
  </template>

```

```

        </ejs-chart>
    </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, StepLineSeries, DateTime, Tooltip } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData:[
        { x: new Date(1975, 0, 1), y: 16, y1: 10, y2: 4.5 },
        { x: new Date(1980, 0, 1), y: 12.5, y1: 7.5, y2: 5 },
        { x: new Date(1985, 0, 1), y: 19, y1: 11, y2: 6.5 },
        { x: new Date(1990, 0, 1), y: 14.4, y1: 7, y2: 4.4 },
        { x: new Date(1995, 0, 1), y: 11.5, y1: 8, y2: 5 },
        { x: new Date(2000, 0, 1), y: 14, y1: 6, y2: 1.5 },
        { x: new Date(2005, 0, 1), y: 10, y1: 3.5, y2: 2.5 },
        { x: new Date(2010, 0, 1), y: 16, y1: 7, y2: 3.7 }
      ],
      primaryXAxis: {
        valueType: 'DateTime'
      },
      marker: {
        visible: true, width: 10, height: 10
      },
      tooltip: { enable: true, header: 'Unemployment', format:
'<b>${point.x} : ${point.y}</b>',
        title: "Unemployment Rates 1975-2010"
      };
    },
    provide: {
      chart: [StepLineSeries, DateTime, Tooltip]
    },

### Tooltip mapping name

By default, tooltip shows information of x and y value in points. You can show more information from data source in tooltip by using the [tooltipMappingName](#) property of the tooltip. You can use the ``${point.tooltip}`` as place holders to display the specified tooltip content.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
      :primaryXAxis='primaryXAxis' :tooltip='tooltip'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column' xName='x'
          yName='y' tooltipMappingName='text' :marker='marker'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category, Tooltip } from

        { x: 'United States Of America', y: 286.9, text: 'USA:
286.9'},
        { x: 'Great Britain', y: 115.1, text: 'GBR: 115.1'},
        { x: 'Nigeria', y: 97.2, text: 'NGR: 97.2'},
      ],
      primaryXAxis: {
        valueType: 'Category'
      },
      marker: {
        visible: true, width: 10, height: 10
      },
      tooltip: {enable: true, format: `${point.tooltip}`},
      title: 'Internet Users in Million - 2016',
    };
  },
  provide: {
```

```

    chart: [ColumnSeries, Category, Tooltip]
  },
};
</script>
<style>
#container{
  height: 350px;
}
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/user-interaction/tooltip-cs6" %}

## Zooming in Vue Chart component

### Enable zooming

Chart can be zoomed in three ways.

- Selection - By setting [enableSelectionZooming](#) property to true in `zoomSettings`, you can zoom the chart by using the rubber band selection.
- Mousewheel - By setting [enableMouseWheelZooming](#) property to true in `zoomSettings`, you can zoom in and zoom out the chart by scrolling the mouse wheel.
- Pinch - By setting [enablePinchZooming](#) property to true in `zoomSettings`, you can zoom the chart through pinch gesture in touch enabled devices.

Pinch zooming is supported only in browsers that support multi-touch gestures. Currently IE11, Chrome and Opera

browsers support multi-touch in desktop devices.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :zoomSettings='zoom' :legendSettings='legend'>
      <e-series-collection>
        <e-series :dataSource='seriesData1' type='Area' xName='x'
yName='y' name='Product X' :border='border' :animation='animation'
opacity=0.3> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, AreaSeries, DateTime, Zoom } from "@syncfusion/ej2-
vue-charts";
Vue.use(ChartPlugin);
let series1: Object[] = [];
let point1: Object;
let value: number = 40;
let i: number;
for (i = 1; i < 500; i++) {
  if (Math.random() > .5) {
    value += Math.random();

```

```

    } else {
      value -= Math.random();
    }
    point1 = { x: new Date(1950, i + 2, i), y: value.toFixed(1) };
    series1.push(point1);
  }
  export default {
    data() {
      return {
        seriesData1: series1,
        primaryXAxis: {
          valueType: 'DateTime',
          labelFormat: 'yMMM'
        },
        zoom: {
          enableMouseWheelZooming: true,
          enablePinchZooming: true,
          enableSelectionZooming: true
        },
        title: 'Sales History of Product X',
        legend: { visible: false },
        border: { width: 0.5, color: '#00bdae' },
        animation: { enable: false }
      };
    },
    provide: {
      chart: [AreaSeries, DateTime, Zoom]
    },
  };
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/user-interaction/zoom-cs2" %}

Note: To use zooming feature, we need to inject **Zoom** into the **provide**.

After zooming the chart, a zooming toolbar will appear with **zoom**, **zoomin**, **zoomout**, **pan** and **reset** buttons.

Selecting the Pan option will allow to pan the chart and selecting the Reset option will reset the zoomed chart.

### Modes

The [mode](#) property in zoomSettings specifies whether the chart is

allowed to scale along the horizontal axis or vertical axis. The default value of the mode is XY (both axis).

There are three types of mode.

- X - Allows us to zoom the chart horizontally.
- Y - Allows us to zoom the chart vertically.

- XY - Allows us to zoom the chart both vertically and horizontally.

**APP.VUE**

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :zoomSettings='zoom' :legendSettings='legend'>
      <e-series-collection>
        <e-series :dataSource='seriesData1' type='Area' xName='x'
yName='y' name='Product X' :border='border' :animation='animation'
          opacity=0.3> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, AreaSeries, DateTime, Zoom } from "@syncfusion/ej2-
vue-charts";
Vue.use(ChartPlugin);
let series1: Object[] = [];
let point1: Object;
let value: number = 40;
let i: number;
for (i = 1; i < 500; i++) {
  if (Math.random() > .5) {
    value += Math.random();
  } else {
    value -= Math.random();
  }

      zoomFactor: 0.2, zoomPosition: 0.6
    },
    zoom: {
      enableSelectionZooming: true,
      enablePan: true
    },
    title: 'Sales History of Product X'
  };
},
provide: {
  chart: [AreaSeries, DateTime, Zoom]
},
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/user-interaction/zoom-cs5" %}

#### Enable scrollbar

Using the [enableScrollbar](#) property, you can add a scrollbar to a zoomed chart. This scrollbar allows you to zoom or pan the chart. The appearance of the scrollbar can be customized using properties in [scrollbarSettings](#). For example, you can use [trackColor](#) and [trackRadius](#) properties to customize the track of the scrollbar, and [scrollbarRadius](#) and [scrollbarColor](#) properties to customize the scroller. The ability to zoom through the scrollbar can be enabled or disabled using the [enableZoom](#) property in [scrollbarSettings](#). Additionally, you can change the color of the grip and height of the scrollbar using the [gripColor](#) and [height](#) properties.

#### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
    :primaryXAxis='primaryXAxis' :zoomSettings='zoom'>

## Data editing in Vue Chart component

### Enable Data Editing

We can use the data editing through inject the **DataEditing** module in the chart provider. It provides drag and drop support to the rendered points. Now, we can change the location or value of the point based on its **y** value. To enable the data editing, set the **enable** property to true in the drag settings of the series. Also, we can set color using **fill** property and set the data editing minimum and maximum range using **minY** and **maxY** properties.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis="primaryYAxis"

### Customization

The [fill](#) and [textStyle](#)

property of the `crosshairTooltip` is used to customize the background color and font style of the crosshair label respectively. Color and width of the crosshair line can be customized by using the [line](#) property in the crosshair.

:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'
:crosshair='crosshair'>
      <e-series-collection>
        <e-series :dataSource='seriesData1' type='Line' xName='x'
yName='y' name='Temperature'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, LineSeries, Legend, Crosshair, DateTime } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
let series1: Object[] = [];
let point1: Object;
let value: number = 40;
let i: number;
for (i = 1; i < 500; i++) {
  if (Math.random() > .5) {
    value += Math.random();
  } else {
    value -= Math.random();
  }
  point1 = { x: new Date(1950, i + 2, i), y: value.toFixed(1) };
  series1.push(point1);
}
export default {
  data() {
    return {
      seriesData1: series1,
      primaryXAxis: {
        valueType: 'DateTime',
        crosshairTooltip: { enable: true, fill: 'green' },
        labelFormat: 'yMMM'
      },
    },
  },
}
```

```

        primaryYAxis: {
            crosshairTooltip: { enable: true, fill: 'green' },
        },
        title: "Weather Condition",
        crosshair: { enable: true, line: {width: 2, color: 'green'}, fill:
'green' }
    };
},
provide: {
    chart: [LineSeries, Crosshair, DateTime]
}

</style>

```

{% previewsample "page.domainurl/code-snippet/chart/user-interaction/crosshair-cs3" %}

Note: To use crosshair feature, we need to inject **Crosshair** into the **provide**.

### Trackball

Trackball is used to track a data point closest to the mouse or touch position. Trackball marker indicates the

closest point and trackball tooltip displays the information about the point. To use trackball feature, we need to inject **Crosshair** and **Tooltip** into the **provide**.

Trackball can be enabled by setting the [enable](#) property of the crosshair to true and [shared](#) property in **tooltip** to true in chart.

## Synchronized Charts in Vue Chart component

### Tooltip synchronization

The tooltip can be synchronized across multiple charts using the [showTooltip](#) and [hideTooltip](#) methods. When we hover over a data point in one chart, we call the `showTooltip` method for the other charts to display related information in other connected charts simultaneously.

In the `showTooltip` method, specify the following parameters programmatically to enable tooltip for a particular chart:

- `x` - Data point x-value or x-coordinate value.
- `y` - Data point y-value or y-coordinate value.

### Crosshair synchronization

The crosshair can be synchronized across multiple charts using the [showCrosshair](#) and [hideCrosshair](#) methods. When we hover over one chart, we call the [showCrosshair](#) method for the other charts to align with data points in other connected charts, simplifying data comparison and analysis.

In the [showCrosshair](#) method, specify the following parameters programmatically to enable crosshair for a particular chart:

- **x** - Specifies the x-value of the point or x-coordinate.
- **y** - Specifies the y-value of the point or y-coordinate.

### Selection synchronization

You can select the data across multiple charts using the [selectionComplete](#) event. In the `selectionComplete` event, obtain the selected values of the particular chart, and then apply those values to the other charts.

### Selection in Vue Chart component

Chart provides selection support for the series and its data points on mouse click.

When Mouse is clicked on the data points, the corresponding series legend will also be selected.

We have different type of selection mode for selecting the data. They are,

- None
- Point
- Series
- Cluster
- DragXY
- DragX
- DragY

## Point

You can select a point, by setting `selectionMode` to point.

## APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' selectionMode='Point'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='gold' name='Gold'> </e-series>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='silver' name='Silver'> </e-series>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='bronze' name='Bronze'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category, Legend, Selection } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50, silver: 70, bronze: 45 },
        { country: "China", gold: 40, silver: 60, bronze: 55 },
        { country: "Japan", gold: 70, silver: 60, bronze: 50 },
        { country: "Australia", gold: 60, silver: 56, bronze: 40 },
        { country: "France", gold: 50, silver: 45, bronze: 35 },
        { country: "Germany", gold: 40, silver: 30, bronze: 22 },
        { country: "Italy", gold: 40, silver: 35, bronze: 37 },
        { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
      ],
      primaryXAxis: {
        valueType: 'Category',
        title: 'Countries'
      },
      title: "Olympic Medals"
    };
  },
  provide: {
    chart: [ColumnSeries, Category, Legend, Selection ]
  }
};
</script>
<style>
  #container {
    height: 350px;
  }
</style>

```

{% previewsample "page.domainurl/code-snippet/chart/user-interaction/selection-cs1" %}

Note: To use select feature, we need to Inject `Selection` into the `provide`.

### Series

You can select a series, by setting `selectionMode` to series.

### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' selectionMode='Series'>

```

{% previewsample "page.domainurl/code-snippet/chart/user-interaction/selection-cs3" %}

### Rectangular selection

#### DragXY, DragX and DragY

To fetch the collection of data under a particular region, you have to set `selectionMode` as `DragXY`.

- DragXY - Allows us to select data with respect to horizontal and vertical axis.
- DragX - Allows us to select data with respect to horizontal axis.
- DragY - Allows us to select data with respect to vertical axis.

The selected data's are returned as an array collection in the [dragComplete](#)

event.

#### APP.VUE

```
<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' :primaryYAxis='primaryYAxis'
selectionMode='DragXY'>

### Selection type

You can select multiple points or series, by enabling the [isMultiSelect](#) property.

### APP.VUE

```

<template>
  <div id="app">
    <ejs-chart id="container" :title='title'
    :primaryXAxis='primaryXAxis' selectionMode='Point' isMultiSelect='true'>
      <e-series-collection>

```

```

        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='gold' name='Gold'> </e-series>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='silver' name='Silver'> </e-series>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='bronze' name='Bronze'> </e-series>
    </e-series-collection>
  </ejs-chart>
</div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category, Legend, Selection } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50, silver: 70, bronze: 45 },
        { country: "China", gold: 40, silver: 60, bronze: 55 },
        { country: "Japan", gold: 70, silver: 60, bronze: 50 },
        { country: "Australia", gold: 60, silver: 56, bronze: 40 },

### Selection on load

You can able to select a point or series programmatically on a chart using [selectedDataIndexes](#) property.

### APP.VUE

```

<template>
  <div id="app">

```

```

    <ejs-chart id="container" :title='title'
:primaryXAxis='primaryXAxis' selectionMode='Point' isMultiSelect='true'
:selectedDataIndexes='selectedData'>
      <e-series-collection>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='gold' name='Gold' :animation='animation'
selectionStyle='chartSelection1'> </e-series>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='silver' name='Silver' :animation='animation'
selectionStyle='chartSelection1'> </e-series>
        <e-series :dataSource='seriesData' type='Column'
xName='country' yName='bronze' name='Bronze' :animation='animation'
selectionStyle='chartSelection1'> </e-series>
      </e-series-collection>
    </ejs-chart>
  </div>
</template>
<script>
import Vue from "vue";
import { ChartPlugin, ColumnSeries, Category, Legend, Selection } from
"@syncfusion/ej2-vue-charts";
Vue.use(ChartPlugin);
export default {
  data() {
    return {
      seriesData: [
        { country: "USA", gold: 50, silver: 70, bronze: 45 },
